3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
ATTN: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $70.00 North America; $140.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA - Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

VOLUME 24 NUMBER 9 / MAY 8, 1986

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) **1367**

02 AERODYNAMICS **1367**

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*

03 AIR TRANSPORTATION AND SAFETY **1370**

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation*.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION **1371**

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications*.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE **1371**

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics*.

06 AIRCRAFT INSTRUMENTATION **N.A.**

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography*.

07 AIRCRAFT PROPULSION AND POWER **1373**

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

08 AIRCRAFT STABILITY AND CONTROL **N.A.**

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) **1373**

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space)*.

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*

12 ASTRONAUTICS (GENERAL) **1374**

For extraterrestrial exploration see *91 Lunar and Planetary Exploration*.

13 ASTRODYNAMICS **1375**

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) **1375**

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air)*.

15 LAUNCH VEHICLES AND SPACE VEHICLES **1376**

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION **N.A.**

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation*.

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING **1376**

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications*.

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE **1377**

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support*. For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics*.

19 SPACECRAFT INSTRUMENTATION **1378**

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography*.

20 SPACECRAFT PROPULSION AND POWER **1390**

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) **1390**
Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS **1391**
Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY **1393**
Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.
For related information see also *77 Thermodynamics and Statistical Physics.*

26 METALLIC MATERIALS **1397**
Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS **1408**
Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS **1412**
Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.
For related information see also *Physics.*

31 ENGINEERING (GENERAL) **1413**
Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS **1414**
Includes land and global communications; communications theory; and optical communications.
For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING **1418**
Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.
For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER **1423**
Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.
For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY **1429**
Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.
For aerial photography see *43 Earth Resources.* For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation.*

36 LASERS AND MASERS **1433**
Includes parametric amplifiers.

37 MECHANICAL ENGINEERING **1436**
Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY **N.A.**
Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS **1439**
Includes structural element design and weight analysis; fatigue; and thermal stress.
For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.
For related information see also *Space Sciences.*

42 GEOSCIENCES (GENERAL) **N.A.**

43 EARTH RESOURCES **1442**
Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.
For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION **1444**
Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION **1448**
Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 1450
Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.
For space radiation see *93 Space Radiation*.

47 METEOROLOGY AND CLIMATOLOGY 1461
Includes weather forecasting and modification.

48 OCEANOGRAPHY 1469
Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) 1471
Includes genetics.

52 AEROSPACE MEDICINE 1473
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES 1476
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT 1478
Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY N.A.
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) 1478

60 COMPUTER OPERATIONS AND HARDWARE 1479
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering*.

61 COMPUTER PROGRAMMING AND SOFTWARE 1482
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS 1488
Includes computer networks.

63 CYBERNETICS 1490
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support*.

64 NUMERICAL ANALYSIS 1491
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY 1495
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS 1499
Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS N.A.
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering*.

70 PHYSICS (GENERAL) 1499
For geophysics see *46 Geophysics*. For astrophysics see *90 Astrophysics*. For solar physics see *92 Solar Physics*.

71 ACOUSTICS 1499
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution*.

72 ATOMIC AND MOLECULAR PHYSICS 1503
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS 1506
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation*.

74 OPTICS 1510
Includes light phenomena.

75 PLASMA PHYSICS 1512
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics*. For space plasmas see *90 Astrophysics*.

76 SOLID-STATE PHYSICS 1515
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers*.

77 THERMODYNAMICS AND STATISTICAL PHYSICS 1518
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer*.

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) 1518
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT 1519
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE 1520
Includes information storage and retrieval technology; micrography; and library science.
For computer documentation see *61 Computer Programming and Software*.

83 ECONOMICS AND COST ANALYSIS N.A.
Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE N.A.
Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION 1522
Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.
For related information see *03 Air Transportation and Safety, 16 Space Transportation*, and *44 Energy Production and Conversion*.

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.
For related information see also *Geosciences*.

88 SPACE SCIENCES (GENERAL) 1522

89 ASTRONOMY 1522
Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS 1523
Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION 1525
Includes planetology; and manned and unmanned flights.
For spacecraft design see *18 Spacecraft Design, Testing and Performance*. For space stations see *15 Launch Vehicles and Space Vehicles*.

92 SOLAR PHYSICS 1525
Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION N.A.
Includes cosmic radiation; and inner and outer earth's radiation belts.
For biological effects of radiation see *52 Aerospace Medicine*. For theory see *73 Nuclear and High-Energy Physics*.

COSATI CODE

A recently developed multiple scale turbulence model is used for the numerical prediction of isothermal, confined turbulent swirling flows. Because of the streamline curvature and nonequilibrium spectral energy transfer nature of the swirling flow, the utilized multiple scale turbulence model includes a different set of response equations for each of the large scale energetic eddies and the small scale transfer eddies. Predictions are made of a confined coaxial swirling jet in a sudden expansion and comparisons are made with experimental data and with the conventional single scale two equation model. The multiple scale model shows significant improvement of predictions of swirling flows over the single scale k epsilon model. The sensitivity study of the effect of prescribed inlet turbulence levels on the flow fields is also included. Author

TRASSA SYSTEM INTRODUCTION CAUSES VARIOUS PROBLEMS c04
T. Boyarskiy *In its* USSR Report: Transportation (JPRS-UTR-85-014) 4 Dec. 1985 p 3-4 Transl. into ENGLISH from Vozdushnyy Transport (Moscow, USSR), 31 Aug. 1985 p 3 (For primary document see N85-18284 09-01)
Avail: NTIS HC A04

The TRASSA air traffic control system is designed to control air movement out to a radius of a few hundred kilometers. The system is built on a new, specially created electronic apparatus connected by communication channels with remote sites, dispersed in various directions, and the coordination of all its multitude of elements turned out to be a very difficult task. Moreover in the process of performance testing, design shortcomings were revealed -- results of both the scientists, whose ideas were more or less realized in the project, not taking their work far enough, and errors by the manufacturing plant. This plant, in particular, gave inaccurate data to the designers regarding the heat release of the future electronic apparatus. As a result in turns out that the apparatus, once installed at each work station, will use no less than 1 kWh of electricity per hour. There are eight such work stations, and in the and the air conditioning equipment suggested to the designers turned out to be ineffective. Design changes and additional work were required. Author

SUBSONIC WALL INTERFERENCE CORRECTIONS FOR HALF-MODEL TESTS USING SPARSE WALL PRESSURE DATA
M. Mokry Nov. 1985 35 p refs Presented at the Euromech Colloquium No. 187 on Adaptive Wall Wind Tunnels and Wall Interference Correction Methods, Goettingen, West Germany, 15-17 Oct. 1984
(LR-616, NRC-25132) Avail: NTIS HC A03/MF A01

A method is described for correcting subsonic wind tunnel measurements on half-models in ventilated test sections, operated at subcritical flow conditions at the walls. For perforated walls, the boundary values of the streamwise component of the wall interference velocity are obtained from static pressures measured by a few longitudinal pressure tubes or rails attached to the walls and from the estimated farfield of the model in free air. The sparse boundary data is extended by means of streamwise smoothing and transverse interpolation. The streamwise velocity correction is derived from the doublet panel solution of an interior Dirichlet problem and the transverse corrections by integrating the irrotational flow conditions. The evaluated corrections to Mach number and angle of attack, presented as contour plots in the wing plane, provide insight into the correctability of the test results. Examples are given for a transport aircraft half-model tested in the NAE high speed wind tunnel. Applicability of the method at supercritical flow conditions at the model is examined on experimental and computational data of a high aspect ratio wing. Author

WIND-TUNNEL INVESTIGATION OF THE PRESSURE DISTRIBUTION AND DEDUCED CHARACTERISTICS OF SEMI-CIRCULAR CYLINDER IN THE VICINITY OF CRITICAL REYNOLDS NUMBER
Naoto Takizawa, Noriaki Okada, and Akihito Iwasaki [1985] 43 p refs In JAPANESE; ENGLISH summary
(NAL-TR-871; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

Two-dimensional semi-circular cylinders have been tested over a Reynolds number range from 67,000 to 600,000 and over angles of attack of + or - 90 deg, to measure pressure distributions and to deduce forces, stagnation, separation and other characteristics. Tests were conducted in the NAL instrument wind-tunnel, the NAL gust wind-tunnel and the Fuji Heavy Industries fume wind-tunnel. The wind-tunnel-boundary correction was specialized by the concept of effective model-height and wake-width. Below an angle of attack of 40 deg, pressure distributions about the upper- and lower-surface were similar to the circular cylinder and the flat plate respectively and showed considered difference between sub-

and super-critical Reynolds number. The lift and drag coefficient range were -0.85 approx. 1.5, 0.4 approx. 2.28 at sub-critical and 0 approx. 2.02, 0.1 approx. 2.37 at super-critical. Features were as follows: Near -60 deg, force coefficient curves, except the chord force, were concave. Near 25 deg, lift coefficient showed a maximum value of 2.02 at super-critical Reynolds number. At 40 deg aprrox. 50 deg, upper suction double peak and negative chord force (but 5 deg approx. 50 deg at super-critical) were shown. At 60 deg approx. 90 deg, pressure distributions over the upper surface showed a low hat shape. Author

COMPRESSIBLE, UNSTEADY LIFTING-SURFACE THEORY FOR A HELICOPTER ROTOR IN FORWARD FLIGHT
Harry L. Runyan and Hsiang Tsi Dec. 1985 21 p refs
(NASA-TP-2503; L-15976; NAS 1.60:2503) Avail: NTIS HC A02/MF A01 CSCL 01A

A lifting-surface theory has been developed for a helicopter rotor in forward flight for compressible and incompressible flow. The method utilizes the concept of the linearized acceleration potential and makes use of the doublet lattice procedure. Calculations demonstrating the application of the method are given in terms of the lift distribution on a one-bladed rotor, a two-bladed rotor, and a rotor with swept-forward and swept-back tips. Also, the lift on a rotor vibrating in a pitching mode at 4 per revolution is given. Compressibility effects and interference effects for a two-bladed rotor are discussed. Author

N86-18290# National Aerospace Lab., Tokyo (Japan).
FLOW QUALITY OF NAL TWO-DIMENSIONAL TRANSONIC WIND TUNNEL. PART 4: CHARACTERISTICS OF FLOW CONTROL
Hitoshi Miwa, Mamoru Sato, Yasuo Oguni, and Hiroshi Kanda Jun. 1985 67 p refs In JAPANESE; ENGLISH summary
(NAL-TR-862; ISSN-0389-4010) Avail: NTIS HC A04/MF A01

The result of a flow control experiment conducted at the National Aerospace Laboratory (Japan) blowdown type two-dimensional transonic wind tunnel are described. This tunnel can be operated over a wide pressure range to change the test Reynolds number. The main features of the operation and control of this tunnel are the application of the precharged starting procedure for establishing high Reynolds number flow and the adoption of the closed-loop Mach number control which acts effectively in a short running time. It is found that high Reynolds number tests can be safely conducted and the flow duration can be increased by applying the precharged starting procedure. And also the closed-loop Mach number control showed excellent Mach number repeatability within an error of + or - .001 at each run. An attempt to expand the operating envelope was successful with satisfying control accuracy. Author

AERODYNAMIC CHARACTERISTICS OF AN AIR-EXCHANGER SYSTEM FOR THE 40- BY 80-FOOT WIND TUNNEL AT AMES RESEARCH CENTER
Vernon J. Rossow, Gene I. Schmidt, Larry A. Meyn, Kimberley R. Ortner, and Robert E. Holmes Jan. 1986 68 p refs
(NASA-TM-88192; A-86036; NAS 1.15:88192) Avail: NTIS HC A04/MF A01 CSCL 01A

A 1/50-scale model of the 40- by 80-Foot Wind Tunnel at Ames Research Center was used to study various air-exchange configurations. System components were tested throughout a range of parameters, and approximate analytical relationships were derived to explain the observed characteristics. It is found that the efficiency of the air exchanger could be increased (1) by adding a shaped wall to smoothly turn the incoming air downstream, (2) by changing to a contoured door at the inlet to control the flow rate, and (3) by increasing the size of the exhaust opening. The static pressures inside the circuit then remain within the design limits at the higher tunnel speeds if the air-exchange rate is about 5% or more. Since the model is much smaller than the full-scale facility, it is not possible to completely duplicate the tunnel, and it will be necessary to measure such characteristics as flow rate and tunnel pressures during implementation of the remodeled facility. The aerodynamic loads estimated for the inlet door and for nearby walls are also presented. Author

PERFORMANCE CHARACTERISTICS OF AN ISOLATED COANNULAR PLUG NOZZLE AT TRANSONIC SPEEDS
Charles E. Mercer and James R. Burley, II Dec. 1985 148 p refs
(NASA-TM-87606; L-16008; NAS 1.15:87606) Avail: NTIS HC A07/MF A01 CSCL 01A

The Langley 16-Foot Transonic Tunnel was used to evaluate the performance characteristics of a coannular plug nozzle at static conditions (Mach number of 0) and at Mach numbers from 0.65 to 1.20. Jet total pressure ratio was varied from 1.0 (jet off) to 10.0. Thirty-seven configurations generated by the combination of three geometric variables - plug angle, shroud boattail length (fixed exit radius), and shroud extension length - were tested. Author

CALCULATION OF HELICOPTER AIRFOIL CHARACTERISTICS FOR HIGH TIP-SPEED APPLICATIONS
W. J. McCroskey, J. D. Baeder, and J. O. Bridgeman 17 May 1985 16 p Presented at the 41st Annual Forum for the American Helicopter Society, Fort Worth, Tex., 15-17 May 1985
(AD-A160694) Avail: NTIS HC A02/MF A01 CSCL 20/4

In this paper, we have applied a new aerodynamic tool to the study of helicopter airfoil characteristics. We have shown that the computed airloads reproduce completely the experimental behavior of representative airfoils across the transonic regime. In addition, the computational details of the flow fields, the surface pressure distributions, and the viscous-layer characteristics enable us to trace the evolution of the physical changes that occur as m infinity or Re increases. Descriptions of the complicated development of shock waves, shock-induced separation supplement the information that has been obtained heretofore in wind tunnels. In validating our calculations and assessing the accuracy of the results, including extensive grid-refinement studies and comparisons with data from numerous wind tunnels, we have defined more precisely the capabilities and limitations of the code ARC2D. This important aspect of the investigations can complement wind-tunnel tests, by providing flow-field details that are difficult to measure and by extending the range of flow parameters beyond the capabilities of existing wind tunnels. The code has now progressed from a purely research stage to almost a production stage, where it can be run by specialists in the helicopter industry. GRA

TWO-DIMENSIONAL HELMHOLTZ FLOW ABOUT A FLAT PLATE AND RELATED SHAPES
T. Tran-Cong and C. A. Martin May 1985 39 p
(AD-A160806; ARL-Aero-TM-372) Avail: NTIS HC A03/MF A01 CSCL 20/4

Various configurations of two-dimensional Helmholtz flow about a flat plate are obtained with a free streamline theory using the flow inside a semi-circular disc. The flow can vary continuously

from fully-attached Joukowski flow to the commonly-known fully-separated Helmholtz flow. Variations of the technique give the flow about flat plates with flaps and other related configurations. GRA

THE CONFORMAL REPRESENTATION OF THE NACA 642A015 PROFILE [DE CONFORME AFBEELDING VAN HET PROFIEL NACA 642A015]
J. J. H. Blom Apr. 1984 51 p refs In DUTCH
(VTH-M-502) Avail: NTIS HC A04/MF A01

In order to construct a wind tunnel model of the symmetric NACA 642A015 airfoil profile, a Timman based airfoil transformation method was used. A smoother and tighter contour profile is obtained. The number of profile coordinates (z-plane) is brought up to 100 points, equidistantly situated on the circle contour (zeta-plane). Adjacent coordinates are calculated using Schoenberg interpolation polynomials. Author (ESA)

ON THE FUNCTION e TO THE POWER SIGMA (THETA) AND THE VELOCITY DISTRIBUTION AROUND EPPLER PROFILES [OVER DE FUNKTIE E TO THE POWER SIGMA (THETA) EN DE SNELHEIDS-VERDELING OM EPPLER-PROFIELEN]
J. J. H. Blom Jun. 1984 25 p refs In DUTCH
(VTH-M-514) Avail: NTIS HC A02/MF A01

For the airfoil profiles, E205, E664 and 1098, the e to the power sigma (theta) function and the velocity distribution for some angles of attack is given. The conformal representation is given in 60 points, equidistantly situated on the circle contour (zeta-plane). From the given velocity distribution, the ratio between velocities in the circle plane (zeta) and the profile plane (z), is easily derived. With e to the power sigma (theta), the velocity distribution for every desired angle of attack is determined. Author (ESA)

WEIGHTING SYSTEM CALIBRATION 1982. PART 1: TEXT AND APPENDICES [IJKING WEEGSYSTEEM 1982. DEEL 1: TEKST EN BIJLAGEN]
F. L. M. Kok Sep. 1983 219 p refs In DUTCH 2 Vol.
(VTH-M-515-1) Avail: NTIS HC A10/MF A01

A six component weighting system for a low speed wind tunnel, its adjustment, and its calibration are briefly described. The processing of the calibration data is treated. Forces and moments are executed upon the system by fixing loads to one or more drawbars. Using these loads, the factors and coefficients of the calculation model are determined. Comparing real and calculated forces and moments, the desired accuracy of the model is judged. For the x-direction force (resistance) and the y-axis moment (mostly diving moment), the required accuracy is not met. Author (ESA)

ON THE FUNCTIONS e TO THE POWER SIGMA (THETA) AND tau (THETA) AND THE VELOCITY DISTRIBUTION AROUND LIGHTHILL PROFILES [OVER DE FUNKTIES E TO THE POWER SIGMA (THETA) EN TAU (THETA) EN DE SNELHEIDS-VERDELING OM LIGHTHILL-PROFIELEN]
J. J. H. Blom Aug. 1984 35 p refs In DUTCH
(VTH-M-520) Avail: NTIS HC A03/MF A01

The Lighthill method was compared with the Timman method and the low drag airfoil profile GU 25-5(11)8. The path of the functions e to the power sigma (theta) and tau (theta) as well as the velocity distribution for some angles of attack is given. The Lighthill method is used for the design of a series of low-drag profiles. The table of coordinates of such a profile appears to contain enough information to derive the functions used by Timman (e to the power sigma and tau) from those used by Lighthill (e log q-zero and chi). CALCULATION OF THE EXTERNAL NACELLE SURFACE FOR SINGLE AND DOUBLE STREAM JET ENGINES FOR CIVIL AIRCRAFT [DE BEREKENING VAN HET OMSPOELD GONDEL-OPPERVLAK VAN ENKEL- EN DUBBELSTROOM STRAALMOTOREN VOOR CIVIELE VLIEGTUIGEN]
E. Torenbeek and G. H. Berenschot Jan. 1983 40 p refs In DUTCH
(VTH-M-445) Avail: NTIS HC A03/MF A01

Simple formulas to be used in the conceptual design phase of civil aircraft for the calculation of principal dimensions and external surface of nacelles for single and double stream engines with turbocompressors are derived and verified. Nacelle surfaces of 35 engines, used in existing or planned aircraft, are determined to verify the formulas. Missing essential dimensions, such as inlet diameter and nacelle length, are referred to performance magnitudes such as bypass ratio and propulsion. Introducing (semi-) static relations, formulas whose applicability depends on available data are derived. An accuracy of 6.5% is reached; the most simple formula has a standard deviation of 12%. Author (ESA)

ON THE INTERPOLATION METHOD OF SCHOENBERG AND THE CALCULATION OF PROFILE COORDINATES [OVER DE INTERPOLATIE-METHODE VAN SCHOENBERG BIJ DE BEREKENING VAN PROFIELCOOERDINATEN]
J. J. H. Blom Feb. 1983 13 p refs In DUTCH
(VTH-M-452) Avail: NTIS HC A02/MF A01

Relations for the Schoenberg interpolation method are given. Offering a smooth profile contour, Schoenberg interpolation polynomials were used in a Timman based conformal airfoil transformation method. A number of polynomials, built up from at most third degree curves, is used over joining intervals, which are continuous in the interval end points. The profile contour coordinates (z-plane) must be equidistantly located on the circle contour (zeta-plane). Author (ESA)

N86-18303# Technische Hogeschool, Delft (Netherlands). Dept. of Aerospace Engineering.
ON THE LONGEST CHORD OF THE FIRST MULLER PROFILE [OVER DE LANGSTE KOORDE VAN HET EERSTE PROFIEL VAN MUELLER]
J. J. H. Blom Oct. 1983 20 p refs In DUTCH
(VTH-M-486) Avail: NTIS HC A02/MF A01

Using literature data, the coordinates, front point, and longest chord, defined as the largest distance between the sharp profile back edge and a point of the profile contour (= the front point) of the Muller wing profile were determined. A simpler transformation function for profile parameters, such as tail angle, curvature, and thickness, used in a Timman based iterative airfoil transformation program, is provided by Muller. Before profile forms can be compared with each other, a normalization on the longest chord is required. The tangent to the contour in the front point is at right angle to the longest chord. For so-called classical profile families, relations indicating exactly the front point can be derived. Author (ESA)

PARAMETRIC DETERMINATION OF LIFT INTERFERENCE FOR THREE-DIMENSIONAL MODELS IN THE EMMEN (SWITZER-

LAND) AIRCRAFT WORKS WIND TUNNEL
Gerard Capitaine 31 Aug. 1984 35 p refs In GERMAN; ENGLISH summary
(F+W-FO-1740) Avail: NTIS HC A03/MF A01

Wind tunnel wall interference effects on the flow around a model were investigated for correction of the test values. A FORTRAN 77 program is developed for determination of the lift interference correction with specific slit parameters and porosity parameters for a three-dimensional compressible flow in a rectangular test section with slotted top and botton walls and closed vertical walls. The numerical procedure is applied to entire configurations and semiconfigurations. The results are plotted on charts to determine the variations of the lift correction and streamline curvature factors for different slit parameters. Author (ESA)

LIFT INTERFERENCE CORRECTIONS FOR THREE-DIMENSIONAL TUNNELS WITH POROUS WALLS
Gerard Capitaine 10 Sep. 1984 39 p refs In GERMAN; ENGLISH summary
(F+W-FO-1742) Avail: NTIS HC A03/MF A01

Slits and porosity factors for the four-slot wall configuration of the wind tunnel test section, and determination of blocking and lift interference corrections as functions of slit and porosity parameters were investigated. A computer program based on the theory of the linearized subsonic flow and developed for determination of wall interference corrections is applied to a rectangular test section with closed vertical walls. The computer program completes von Vaucheret's correction method for three-dimensional models in high subsonic fields. The transonic wind tunnel is calibrated using homothetic calibration models for determination of the wall interference and for improvement of the approximation value for test section slit and porosity factors. GENERAL AVIATION CRASHWORTHINESS PROJECT, PHASE 3: ACCELERATION LOADS AND VELOCITY CHANGES OF SURVIVABLE GENERAL AVIATION ACCIDENTS Safety Report, 1972-1981
4 Sep. 1985 189 p
(NTSB/SR-85/02) Avail: NTIS HC A09/MF A01

This report is the last in a series of three issued by the National Transportation Safety Board as a result of its General Aviation Crashworthiness Program. Its purpose is to provide information to support changes in crashworthiness design standards for seating and restraint systems in general aviation airplanes. Phase One presents a methodology for documenting impact severity. Phase Two presents specific data on survivable accidents which demonstrate that if all occupants wear shoulder harnesses, fatalities are expected to be reduced by 20 percent. Eighty-eight percent of the seriously injured persons in survivable crashes are expected to experience significantly fewer life-threatening injuries. The Phase Three report provides analytical results of actual crashes. The values of acceleration loads and velocity changes that occupants can sustain in survivable, modern general aviation airplane accidents are defined. This report also discusses specific crashworthiness problems including sea/restraint systems that failed, shoulder harnesses that were not worn, and inadequate or nonexistent seat stroking ability. THE AIRCRAFT ICING ENVIRONMENT IN WINTERTIME, LOW CEILING CONDITIONS Final Report
N. B. Guttman, R. K. Jeck, M. R. Henderson, and M. D. Mueller 28 Oct. 1985 74 p
(AD-A160578; NRL-MR-5650) Avail: NTIS HC A04/MF A01 CSCL 09/2

Radiosonde (Raob) temperature and humidity data were used to deduce the vertical distribution of clouds and aircraft icing conditions near Washington, D.C. when low ceilings (- or < 1000 ft)(0/3 km) occurred along with surface temperatures near freezing. Automated predictions of the vertical distribution of icing probability, type, and severity were generated from the Raob data. The technique employs a U.S. Air Force method that has been computerized by one of the authors (RKJ) for use on Hewlett Packard model 9845 computers. The predictions were compared with pilot reports from the vicinity and reasonable agreement was found. GRA

AN ELECTRONIC INDEX OF ARTICLES PERTAINING TO AIR FORCE TRANSPORTATION IN THE POST-WORLD WAR 2 ERA, WITH ABSTRACTS OF SELECTED ARTICLES M.S. Thesis
F. R. Anible Sep. 1985 41 p
(AD-A160837; AFIT/GLM/LSM/85S-1) Avail: NTIS HC A03/MF A01 CSCL 15/5

This thesis designed and compiled an electronic index system to catalog articles in military, transportation, and aviation periodicals published during the period 1947 through 1957 and pertaining to transportation and its relationship to the U.S. Air Force. The system consists of a Master Index giving the title, author, publication, and date of over 1,000 articles, with abstracts of selected articles. Separate alphabetical Author, Title, and Subject Indexes are cross-referenced to the Master Index through a simple numerical code system. The indexes are stored on 5-1/4 inch flexible magnetic diskettes which are placed in pockets fastened into the front and back covers of the copy of the thesis kept in the Library of the School of Systems and Logistics, Air Force Institute of Technology. The articles indexed are those dealing with transportation modes and vehicles owned, operated, used, contracted, and leased by the Air force operations. In addition, source pertaining to the interface of Air Force airlift operations and operations of other services are included. GRA

CALIBRATION OF AN ON-GROUND AIRCRAFT TRACKING RADAR BY AERIAL PHOTOGRAMMETRY
Kenji Yazawa, Toshiharu Inagaki, Takatsugu Ono, and Toichi Oka Jun. 1985 42 p refs In JAPANESE; ENGLISH summary
(NAL-TR-861; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

An on-ground tracking radar is calibrated for obtaining the accurate position of an aircraft during flight testing. The calibration was performed by aerial photogrammetry for estimating the position and the attitude of an aircraft compared with synchronized data from tracking radar. The accuracy of aerial photogrammetry using a non-metric camera is less than 0.2% of the flight altitude from ground. The accuracy corresponds to an angle of 0.01 degree at 1000m height and 10km distance from the radar. It is comparable to the resolution of the radar. Author

PROBABILISTIC EVALUATION OF INDIVIDUAL AIRCRAFT TRACKING TECHNIQUES M.S. Thesis
R. L. Wilkinson Sep. 1985 146 p
(AD-A160146; AFIT/GSM/ENS/85S-32) Avail: NTIS HC A07/MF A01 CSCL 01/3

A study was conducted in order to demonstrate a technique for comparing the outputs of various individual aircraft tracking (IAT) systems. There were two objectives: (1) to determine the distribution of structural lives that could be expected based on a single IAT scenario, and (2) to evaluate the feasibility of replacing the current universal IAT safety factor with specific statistical calculations that consider the strengths and weaknesses of each IAT system. The ultimate goal of this thesis was to begin the transition of individual aircraft tracking from a deterministic approach to a stochastic one. A simulation was performed which included twelve aircraft, each flying five different load history variations at three gross weights. Initial structural damage was assumed based on a reset flaw size after nondestructive inspection. Structural lives were normally distributed with a mean of approximately 4700 flight hours. The cracks present at the one-half lifetime depot inspection were lognormally distributed. Using these distributions, the probabilities of structural failure were calculated for several inspection intervals. Repeating this process for other IAT scenarios would allow a direct comparison of various IAT systems. Eventually, such a process could lead to individual system safety factors, rather that the current universal safety factor. GRA

THE INTELLIGIBILITY OF NON-VOCODED AND VOCODED SEMANTICALLY ANOMALOUS SENTENCES
M. A. Mack and B. Gold 26 Jul. 1985 39 p
(Contract F19628-85-C-0002)
(AD-A160401; TR-703; ESD-TR-85-211) Avail: NTIS HC A03/MF A01 CSCL 05/7

This document is devoted to an analysis of the intelligibility of semantically anomalous sentences presented in four acoustically different conditions: (1) natural speech, no noise; (2) vocoded speech, no noise; (3) vocoded speech, noise added to the pitch track; (4) vocoded speech, noise to the spectrum. One objective was to analyze the specific types of errors in each condition. The other objective was to compare results of this analysis with results obtained from the Diagnostic Rhyme Test (DRT). Results revealed that intelligibility was quite good in conditions (1) and (2), relatively poor in (3), and quite poor in (4) -- results consistent with DRT data. Further, about 60% of all errors were phonemic, while 40% were syntactic and semantic. We conclude that information in the spectrum is more critical than information in the pitch track, that most errors affect the phonological component when intelligibility is poor and context is uncertain, and that the DRT is an appropriate though perhaps insufficient test of speech intelligibility. MONITORING OF GPS (GLOBAL POSITIONING SYSTEM) SYSTEM PERFORMANCE Final Report, Mar. 1984 - Mar. 1985
J. Vilcans Jun. 1985 128 p Sponsored in part by Department of Transportation, Washington, D.C. and Special Programs Administration
(PB85-242980; DOT-TSC-RSPA-85-3) Avail: NTIS HC A07/MF A01 CSCL 17G

The Global Positioning System (GPS), a worldwide satellite-based navigation system developed by the Department of Defense, is scheduled to become operational in late 1988. The system has the potential to become the primary radionavigation system for the United States. This study is an assessment of GPS system integrity and navigation performance using monitored satellite signals and processed navigation data, as well as the analyzed data content of advisory and health messages. Improvements to the integrity of a basic GPS system using additional signal processing, aiding, and enhanced monitoring techniques are discussed. Author (GRA)

EFFECTIVENESS OF FATIGUE LIFE ENHANCING FASTENERS

IN THE DESIGN AND REWORK OF AIRCRAFT STRUCTURES Final Report, Feb. 1982 - Feb. 1985
P. A. Kozel 28 Feb. 1985 31 p
(F41-420)
(AD-A159676; NADC-85112-60) Avail: NTIS HC A03/MF A01 CSCL 13/5

Fatigue life data were obtained for four different types of fatigue life enhancing (FLE) fasteners installed in new uncracked holes and in reworked, pre-cracked holes. The first condition represented a new design where the FLE fasteners are installed during production. The second condition represented a structural rework in which fastener holes are reamed to a larger size to remove fatigue or fretting damage but might still contain a small undetected crack. Results showed that the FLE fasteners produced approximately the same overall fatigue life in the new design and the rework condition and provided a significant increase in life compared to conventional non-FLE fasteners. Tests were performed with 7075-T6 aluminum alloy under spectrum loading typical of a Navy fighter/attack type of aircraft. For the rework condition, the pre-crack size was limited to .03 inch (.76mm). Flush head fasteners were used in all tests. GRA

EFFECTS OF BLADE-TO-BLADE DISSIMILARITIES ON ROTOR-BODY LEAD-LAG DYNAMICS
M. J. McNulty 1985 29 p
(AD-A160497) Avail: NTIS HC A03/MF A01 CSCL 01/3

Small blade-to-blade property differences are investigated to determine their effects on the behavior of a simple rotor-body system. An analytical approach is used which emphasizes the significance of these effects from the experimental point of view. It is found that the primary effect of blade-to-blade dissimilarities is the appearance of additional peaks in the frequency spectrum which are separated from the conventional response modes by multiples of the rotor speed. These additional responses are potential experimental problems because when they occur near a mode of interest they act as contaminant frequencies which can make damping measurements difficult. The effects of increased rotor-body coupling and a rotor shaft degree of freedom act to improve the situation by altering the frequency separation of the modes. Author (GRA)

RESONANCE FATIGUE TEST OF THE EMPENNAGE OF A CT4 AIRCRAFT
I. Anderson and L. Molent Jun. 1985 36 p
(AD-A160749; ARL/STRUC-TM-412) Avail: NTIS HC A03/MF A01 CSCL 01/3

A resonance fatigue test was carried out on the rear fuselage and empennage of a CT4 aircraft. The structure was supported in a reaction frame, and was excited at the resonant frequency of the fuselage torsional mode (9 Hz) by electromagnetic shakers connected to the tailplane. The loading spectrum applied was based on strain sequence data obtained from flight trials. Regular inspections of the structure were carried out, and several areas on the rear fuselage and empennage were identified as being prone to fatigue damage. GRA

PRELIMINARY AIRWORTHINESS EVALUATION OF THE AH-1S (MODERNIZED COBRA) WITH THE HELLFIRE, TOW, AND STINGER MISSILES INSTALLED Final Report, 17 May - 27 Jul. 1984
R. MacMullin, G. T. Downs, E. Tavares, J. S. Lawrence, and L. L. Todd Oct. 1984 188 p
(AD-A160862; USAAEFA-84-11) Avail: NTIS HC A09/MF A01 CSCL 01/2

The aircraft was operated at gross weights up to 10,400 lb, up to 11,340 feet density altitude and at a lateral center of gravity (cg) range from one inch right to approximately three inches left. The asymmetric loadings were caused by the various combinations of armament configurations. The change in equivalent flat plate area compared to the clean aircraft for each configuration varied as a function of airspeed. At 130 knots true airspeed (KTAS), the increased flat plate area was 4.2 square feet for the Launcher configuration, 4.8 square feet for the TOW configuration, 6.6 square feet for the Hellfire and Hellfire/TOW configurations, and 7.8 square feet for the Stinger/Hellfire/TOW configuration. The increase in flat plate area for the Stinger/Hellfire/TOW configuration reduced maximum level flight speed for normal rated power by approximatley 8 KTAS. With the exception of the two armament related shortcomings listed below, the handling qualities and the reactions to system failures of the AH-1S (MC) were not significantly changed by the asymmetric loading of the various armament configurations. Four shortcomings were noted and follow in decreasing order of importance: (1) the high left rolling response to a sudden engine failure at power settings above 75% torque; (2) the undesirable maneuvering stability characteristics above 1.4 g's; (3) insufficient left pedal margin available in right sideward flight above 10 knots in the Hellfire and Hellfire/TOW configurations; and (4) insufficient left pedal margin available for ball-centered forward flight below 30 KCAS in the armament configurations with left lateral cf offset. A CAUTION is recommended for inclusion in the operator's manual. GRA

In accordance with the tradition, the general designer directly guides any new aircraft up to the conclusion of state testing, but this does not mean that he stops watching the aircraft closely during operation as well. Such an aircraft is now in the Experimental Design Bureau imeni S. Ilyushin--the Il-96-300 long-range mainline passenger aircraft. It is designed to carry 300 passengers, baggage, mail and freight on long-distance routes--up to 9,000 kilometers--with heavier passenger flows. Provision is being made for use of the aircraft on international routes, including those up to 11,000 kilometers in length. G.L.C.

CATALYTIC COMBUSTION OF GAS TURBINES: PROCESS MODELLING AND KINETIC STUDY OF ISO-OCTANE OXIDATION Ph.D. Thesis Abstract Only
Thomas Wha Seung Ahn 1983 3 p
Avail: Issuing Activity

Mathematical models have been developed to predict the behavior of monolith catalytic combustor operating under typical gas turbine conditions. The models are both for transient and steady-state operation, and account for: (1) homogeneous and heterogeneous reactions; (2) convective heat and mass transport; (3) conduction and radiation heat transfer in solid phase; and (4) variations of velocity and property in gas phase. Gas velocity and physical property variations along the monolith have an important effect on model predictions. Although radiation and conduction significantly effect temperature profiles, they have little influence on overall conversion. A comparison of model predictions with limited experimental data available shows encouraging agreement. Author

AXIAL COMPRESSOR REVERSED FLOW PERFORMANCE Ph.D. Thesis
R. N. Gamache May 1985 454 p
(AD-A160773; AD-E401375; AFIT/CI/NR-85-108D) Avail: NTIS HC A20/MF A01 CSCL 13/7

The results of an analytical study of compression system forced response and an experimental investigation of the reversed flow performance of a three-stage axial-flow compressor are presented. A one dimensional lumped parameter description of the dynamics of a simple compression system was found to be capable of simulating the circumstances under which the imposition of a periodic external excitation can force a normally surging compression system into a small amplitude oscillation about the nonrecoverable stall point. This forced oscillation can then decay into a system stagnation upon termination of the external excitation. It was also found, however, that predictions of compression system forced response behavior were heavily dependent upon the model used for defining compressor post-stall performance, both steady state and transient, especially in the reverse flow and mass flow and shutoff operating regimes. The complete set of pressure rise and torque characteristics of a three-stage axial-flow compressor are presented. Two stable stalled flow modes have been observed in the multi-stage axial compressor builds tested: (1) rotating stall, and (2) full annulus stalled flow. The transition to each of the two stalled modes is accompanied by a discontinuous drop in overall time-averaged pressure rise and torque performance. Although a large hysteresis is associated with the unstall-rotating stall transition (which occurs at a relatively large positive flow coefficient), the transition from rotating stall to the annulus stall mode (which occurs at a negative flow coefficient near shutoff) has no hysteresis. GRA

08 AIRCRAFT STABILITY AND CONTROL

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

CURRENT WIND TUNNEL CAPABILITY AND PLANNED IMPROVEMENTS AT LEWIS RESEARCH CENTER
David N. Bowditch [1986] 24 p refs Prepared for presentation at the 14th Aerodynamic Testing Conference, West Palm Beach, Fla., 5-7 Mar. 1986; sponsored by AIAA
(NASA-TM-87190; E-2844; NAS 1.15:87190) Avail: NTIS HC A02/MF A01 CSCL 14B

As the propulsion and power generation center of NASA, Lewis has designed its wind tunnels for propulsion research. Therefore, the 8 by 6 Foot Supersonic Wind Tunnel and the 10 by 10 Foot Supersonic Wind Tunnel provide the capability to test operating propulsion systems from Mach 0.4 to 3.5. The 9 by 15 Foot Wind Tunnel can investigate propulsion installation problems at the lower takeoff and landing speeds and provides an excellent anechoic environment to measure propeller and fan noise. The Lewis Central Air System provides steady air supplies to 450 psi, and exhaust to 3 in. of mercury absolute, which are available to the wind tunnels for simulation of jets and engine induced flows. The Lewis Icing Research Tunnel is the largest in the free world that can produce icing conditions throughout the year. Rehabilitation of the Altitude Wind Tunnel at Lewis would allow testing of propulsion systems in the upper left hand corner which would be a unique capability. Also, in a mothballed state at Lewis, the Hypersonic Tunnel Facility could provide the best simulation of nonvitiated Mach 5-7 test conditions available. Studies are currently being made of the Lewis facilities to identify enhancements of their research potential for the 1990's and beyond. Author

ANALYSIS OF HEAT-TRANSFER MEASUREMENTS FROM TWO AEDC WIND TUNNELS ON THE SHUTTLE EXTERNAL TANK Final Report, 1 Oct. 1982 - 30 Nov. 1983
K. W. Nutt Oct. 1985 82 p Prepared in cooperation with Calspan Field Services, Inc., Arnold AFS, Tenn.
(AD-A160406; AEDC-TR-84-3) Avail: NTIS HC A05/MF A01 CSCL 20/13

Previous aerodynamic heating tests were conducted in the AEDC/VKF Supersonic Wind Tunnel (A) to aid in defining the design thermal environment for the Space Shuttle external tank. The quality of these data has been under discussion because of the effects of low tunnel enthalpy and slow model-injection rates. Recently the AEDC/VKF Hypersonic Wind Tunnel (C) was modified to provide a Mach 4 capability that has significantly higher tunnel enthalpy with more rapid model-injection rates. Tests were conducted in Tunnel C at Mach 4 to obtain data on the external tank for comparison with Tunnel A results. Data were obtained on a 0.0175-scale model of the Space Shuttle Integrated Vehicle at Re/ft = 4 million with the tunnel stagnation temperature varying from 740 to 1440 R. Model attitude varied from an angle of attack of -5 to 5 deg and an angle of sideslip of -3 to 3 deg. One set of data was obtained in Tunnel C at Re/Ft = 69 million for comparison with flight data. This report presents data comparisons betwen the two tunnels for numerous regions on the external tank. Tunnel-to-flight data comparisons are presented for a small number of locations on the nose of the external tank. GRA

THE MINITUFT SURFACE FLOW VISUALISATION METHOD: EXPERIENCE OF USE IN THE RAE 5m PRESSURISED LOW-SPEED WIND TUNNEL
D. G. Dobney, P. Hanson, and S. P. Fiddes Apr. 1985 21 p
(AD-A160715; RAE-TM-AERO-2038; DRIC-BR-96537) Avail: NTIS HC A02/MF A01 CSCL 14/2

The development and use of a minituft surface flow visualization technique in the RAE 5m Pressurized Low-Speed Wind Tunnel is described. The method uses very fine nylon monofilaments to show surface flow direction. These tufts are made visible by coating them in a fluorescent dye and then illuminating them with a powerful ultra-violet light source. Because of their small size, a large number of tufts may be used without interfering with the flow to a great extent. However, it is shown that if accurate force measurements are required, then it is advisable to test the model in the absence of tufts. GRA

FLIGHT TRAINING SIMULATORS. EFFECTS OF TERRAIN ACCURACY ON SIMULATED RADAR IMAGE QUALITY Interim Technical Paper, Sep. 1984 - May 1985
P. M. Crane Sep. 1985 18 p
(AF Proj. 614)
(AD-A160905; AFHRL-TP-85-28) Avail: NTIS HC A02/MF A01 CSCL 17/9

This experiment evaluated the effect of terrain vertical accuracy on the quality and perceived training effectiveness of simulated radar images. Seven Air Force navigators judged the quality and training value of digital radar landmass imagery produced at six different levels of terrain vertical accuracy. Each image represented the simulated ground mapping radar image of a mountainous area viewed from an altitude of 10,000 feet. The results indicated that: (1) increasing terrain vertical accuracy above the current production standard did not significantly increase either the judged quality of the imagery or its perceived training value; and (2) decreasing terrain vertical accuracy below the current production standard significantly increased either the judged quality of the imagery or the perceived training value of the imagery. Although the results of this experiment do not provide any justification for more stringent accuracy requirements, it is recommended that this experiment be replicated using lower altitude imagery in which the effects of terrain evaluation are more pronounced. ACCOMMODATION REQUIREMENTS FOR MICROGRAVITY SCIENCE AND APPLICATIONS RESEARCH ON SPACE STATION Interim Report, 24 May - 24 Dec. 1985
Mark L. Uhran, Lawrence R. Holland, and William O. Wear Dec. 1985 225 p
(Contract NAS3-24654)
(NASA-CR-175038; NAS 1.26:175038; JN67801) Avail: NTIS HC A10/MF A01 CSCL 22A

Scientific research conducted in the microgravity environment of space represents a unique opportunity to explore and exploit

the benefits of materials processing in the virtual absence of gravity induced forces. NASA has initiated the preliminary design of a permanently manned space station that will support technological advances in process science and stimulate the development of new and improved materials having applications across the commercial spectrum. A study is performed to define from the researchers' perspective, the requirements for laboratory equipment to accommodate microgravity experiments on the space station. The accommodation requirements focus on the microgravity science disciplines including combustion science, electronic materials, metals and alloys, fluids and transport phenomena, glasses and ceramics, and polymer science. User requirements have been identified in eleven research classes, each of which contain an envelope of functional requirements for related experiments having similar characteristics, objectives, and equipment needs. Based on these functional requirements seventeen items of experiment apparatus and twenty items of core supporting equipment have been defined which represent currently identified equipment requirements for a pressurized laboratory module at the initial operating capability of the NASA space station. POLAR MOMENTS AND BALLISTIC PROPERTIES OF TRI-FOIL PENETRATORS Final Technical Report
D. N. Hansen Sep. 1985 25 p
(DA Proj. 1L1-62618-AH-80)
(AD-A159870; BRL-TR-2677) Avail: NTIS HC A02/MF A01 CSCL 19/4

Early design tools for tri-foils involved the use of ersatz structures for analysis purposes. This paper presents a method that employs the actual shape to calculate the polar moments of inertia relative to a rod of equal cross sectional area. The method also degrades at its extrema into two logical shapes for this calculation, namely the circle and the equilateral triangle. A ballistic test was performed on a tri-foil having an effective aspect ratio of 14. Performance comparisons with a rod of aspect ratio 16 shows the ballistic performance of the tri-foil to be of the same order but marginally poorer. Systems considerations using tri-foils could make the tri-foil more attractive than the rod. GRA

PNS (PARABOLIZED NAVIER-STOKES) COMPUTATIONS FOR SPINNING AND FIN-STABILIZED PROJECTILES AT SUPERSONIC VELOCITIES
P. Weinacht, B. J. Guidos, L. D. Kayser, and W. B. Sturek Sep. 1985 42 p
(DA Proj. 1L1-62618-AH-80)
(AD-A160393; BRL-MR-3464) Avail: NTIS HC A03/MF A01 CSCL 19/4

The Parabolized Navier-Stokes (PNS) computational technique has been applied to calculate the three-dimensional viscous flow about a standard spinning projectile and a long L/D finned projectile. The results for the spinning projectile are compared with past PNS computations and wind tunnel pressure and force measurements in order to benchmark the update version of the code. Excellent agreement is found and the improvements to the code are shown to provide greater computational efficiency. Results are then presented for the finned projectile configuration and comparison made with predictions from an inviscid code and values from a data base compiled from range firings. GRA

DEVELOPMENT AND APPLICATION OF DYNAMIC SIMULATIONS OF A SUBSONIC WIND TUNNEL
John R. Szuch, Gary L. Cole, Robert C. Seidel, and Dale J. Arpasi [1986] 16 p refs Prepared for presentation at the 14th Aerodynamic Testing Conference, West Palm Beach, Fla., 5-7 Mar. 1986; sponsored by AIAA
(NASA-TM-87211; E-2870; NAS 1.15:87211) Avail: NTIS HC A02/MF A01 CSCL 14B

Efforts are currently underway at NASA Lewis to improve and expand ground test facilities and to develop supporting technologies to meet anticipated aeropropulsion research needs. Many of these efforts have been focused on a proposed rehabilitation of the Altitude Wind Tunnel (AWT). In order to insure a technically sound design, an AWT modeling program (both analytical and physical) was initiated to provide input to the AWT final design process. This paper describes the approach taken to develop analytical, dynamic computer simulations of the AWT, and the use of these simulations as test-beds for: (1) predicting the dynamic response characteristics of the AWT, and (2) evaluating proposed AWT control concepts. Plans for developing a portable, real-time simulator for the AWT facility are also described. Author

STS (SPACE TRANSPORTATION SYSTEM) LAUNCH-INDUCED VIBRATION FORECASTS FOR VANDENBERG AFB
J. C. Battis 7 Oct. 1985 9 p
(AF Proj. 7600)
(AD-A160561; AD-E301825; AFGL-TR-85-0227) Avail: NTIS HC A02/MF A01 CSCL 16/1

Launch-induced vibration environment forecasts have been made for locations in major Ground Support System (GSS) structures at the Vandenberg AFB Shuttle launch facility (V23). These forecasts were made by coupling a model for the Shuttle rocket acoustics with observed vibrations of GSS structures due to charge detonations over the Launch Mount. The forecasts indicate that launch environments at two locations will exceed levels of concern established for this study. First, the potential exists for pounding between the Payload Changeout Room (PCR) and the transfer tower of the Payload Preparation Room (PPR). Second, accelerations exceeding 1 g are forecast for the floor of the Orbiter Functional Simulator Room (OFS) in the Administration Building (AB). At all other locations motion levels were found to be significantly below the criteria established for the respective sites. Author (GRA)

HC A03/MF A01 CSCL 17B

A relationship is derived, on a single-entry interference basis, for the minimum allowable spacing between two satellites as a function of electrical parameters and service-area geometries. For circular beams, universal curves relate the topocentric satellite spacing angle to the service-area separation angle measured at the satellite. The corresponding geocentric spacing depends only weakly on the mean longitude of the two satellites, and this is true also for elliptical antenna beams. As a consequence, if frequency channels are preassigned, the orbital assignment synthesis of a satellite system can be formulated as a mixed-integer programming (MIP) problem or approximated by a linear programming (LP) problem, with the interference protection requirements enforced by constraints while some linear function is optimized. Possible objective-function choices are discussed and explicit formulations are presented for the choice of the sum of the absolute deviations of the orbital locations from some prescribed ideal location set. A test problem is posed consisting of six service areas, each served by one satellite, all using elliptical antenna beams and the same frequency channels. Numerical results are given for the three ideal location prescriptions for both the MIP and LP formulations. The resulting scenarios also satisfy reasonable aggregate interference protection requirements. Author

A COMPARISON OF 8.415-, 32.0- AND 565646-GHz DEEP SPACE TELEMETRY LINKS
R. M. Dickinson 15 Oct. 1985 71 p refs
(Contract NAS7-100)
(NASA-CR-176532; JPL-Pub-85-71; NAS 1.26:176532) Avail: NTIS HC A04/MF A01 CSCL 09F

An economic and performance comparison is made of spacecraft telecommunication links at 8.415, 32.0, and 565646 GHz (0.53-micron wavelength) for the return of 3.43 x 10 to the 11th power bits from a Saturn Orbiter/Titan Probe mission in year 2000. Technical performance and costs for both ends of the links are included. Spacecraft antenna or telescope efficiencies, pointing losses, ground-based or Earth-orbiting relay terminals efficiencies, noise temperatures, recurring and nonrecurring engineering, and maintenance and operations costs are modeled. Weather effects, dc-to-RF or laser power conversion efficiencies, gravity and other environment distortions gain reductions, and the cost of pointing and tracking are analyzed. The effort is focused primarily on the microwave frequency links. There are large uncertainties in the cost results, but conclusions indicate that for a mid-1990's launch, the Ka-band system is as cost effective as X-band. The Ka-band system has a data rate advantage as compared to the X-band system for the same dc power input to the spacecraft. The magnitude of the advantage is a complex function of the weather at the DSN stations and the elevation angle of the ground antenna. A simple numerical comparison of the advantage is difficult and curves are provided. The optical frequency link is more costly based on the launch-to-orbit costs for the orbiting terminal. A more detailed study of the optical system is recommended to quantify astrometric tracking benefits and improve the accuracy of the cost estimate. Author

BIT ERROR RATE TESTING OF A PROOF-OF-CONCEPT MODEL BASEBAND PROCESSOR
John B. Stover and Gene Fujikawa Jan. 1986 41 p refs
(NASA-TM-87206; E-2861; NAS 1.15:87206) Avail: NTIS HC A03/MF A01 CSCL 09F

Bit-error-rate tests were performed on a proof-of-concept baseband processor. The BBP, which operates at an intermediate frequency in the C-Band, demodulates, demultiplexes, routes, remultiplexes, and remodulates digital message segments received from one ground station for retransmission to another. Test methods are discussed and test results are compared with the Contractor's test results. Author

ASTRO-ARRAY: A SPACE-BASED, COHERENT RADIO INTERFEROMETER ARRAY
K. W. Weiler, J. H. Spencer, and K. J. Johnston 31 Oct. 1985 49 p
(RR0-3406)
(AD-A160763; AD-E401375; NRL-MR-5657) Avail: NTIS HC A03/MF A01 CSCL 03/2

With the proven techniques of radio astronomy and the rapidly advancing technology of space science, it is clear that the expansion of radio astronomy arrays beyond the limits of the Earth's surface is called for. Therefore, a preliminary discussion of the design and capability of a purely space based array is presented. The science which can be done with such a high resolution, high sensitivity radio telescope array is discussed and a number of the parameters of a system are developed. A coherent interferometer array is possible with reasonable extensions of present technology and such a telescope will lead to major advances in the areas of astrometry, the study of radio stars and radio supernovae, the investigation of astronomical masers, and the determination of the properties of the Milky Way nucleus and the active regions of normal galaxies, radio galaxies, and quasars. It is clear that an array of high orbit radio antennas linked to the low orbit space station represents the next logical step in the progression to continually higher resolution and sensitivity for radio astronomy. THE OTS: SIXTH YEAR IN ORBIT Progress Report
Feb. 1985 164 p
Avail: NTIS HC A08/MF A01

The Orbital Test Program and operational uses of OTS, particularly for European television transmission, before its use by EUTELSAT ended in December 1983 are described. The performance of spacecraft subsystems is reviewed. End of service tests were conducted, and the satellite proceeded, fully functional in virtually all aspects, into its seventh year in orbit; it continues to provide long-life data, while having, in 1983, overlapped the entry into service of the European communications satellite ECS-F1. Author (ESA)

THE OTS: SEVENTH YEAR IN ORBIT Progress Report
D. Howle, comp., L. vanHoltz, P. Leggett, S. Strijk, E. Ashford, and H. Agterhuis, comp. Aug. 1985 75 p
Avail: NTIS HC A04/MF A01

The performance during the seventh year in orbit of the OTS spacecraft subsystems is described. The satellite proceeded fully functional in virtually all aspects throughout its seventh year in orbit and continues to provide long-life data. Following successful execution of the main part of the end of service test program on subsystems, a few of the most risky ones e.g., thermal control coatings, and attitude control are still outstanding and the satellite is kept available for additional technological platform tests before being boosted out of the geosynchronous orbit. Author (ESA)

AN ANALYTICAL INVESTIGATION OF A CONCEPTUAL DESIGN FOR THE STATION TRANSVERSE BOOM ROTARY JOINT STRUCTURE
Mark S. Lake and Harold G. Bush Jan. 1986 34 p refs
(NASA-TM-87665; NAS 1.15:87665) Avail: NTIS HC A03/MF A01 CSCL 22B

A study was conducted to define an annular ring, discrete roller assembly concept for the space station transverse boom rotary joint. The concept was analyzed using closed-form and finite element techniques, to size structural members for a range of joint diameters and to determine necessary equivalent stiffnesses for the roller assemblies. Also, a mass study of the system was conducted to determine its practicality, and maximum loads in the joint were identified. To obtain the optimum balance between high stiffness and low structural mass in the design of the rotary joint, it is necessary to maximize the diameter of the annular ring within operational constraints (i.e., shuttle cargo bay size). Further, a rotary joint designed with the largest possible ring diameter will result in minimum operational loads in both the roller assemblies and the transition truss members while also allowing minimum design stiffnesses for the roller assemblies. SPACE STATION COMMON MODULE POWER SYSTEM NETWORK TOPOLOGY AND HARDWARE DEVELOPMENT
David M. Landis Apr. 1985 21 p
(Contract NAS8-36583)
(NASA-CR-178587; NAS 1.26:178587; MCR-85-621-000) Avail: NTIS HC A02/MF A01 CSCL 22B

Candidate power system newtork topologies for the space station common module are defined and developed and the necessary hardware for test and evaluation is provided. Martin Marietta's approach to performing the proposed program is presented. Performance of the tasks described will assure systematic development and evaluation of program results, and will provide the necessary management tools, visibility, and control techniques for performance assessment. The plan is submitted in accordance with the data requirements given and includes a comprehensive task logic flow diagram, time phased manpower requirements, a program milestone schedule, and detailed descriptions of each program task. CRRES/SPACERAD (COMBINED RELEASE AND RADIATION EFFECTS SATELLITE/SPACE RADIATION EFFECTS PRO-

GRAM) EXPERIMENT DESCRIPTIONS Environmental Research Papers, 1 Oct. 1984 - 15 Jan. 1985
M. S. Gussenhoven, E. G. Mullen, and R. C. Sagalyn 24 Jan. 1985 196 p
(AD-A160504; AFGL-TR-85-0017; AFGL-ERP-906) Avail: NTIS HC A09/MF A01 CSCL 22/1

The Space Radiation Effects (SPACERAD) Program is a comprehensive space program whose purposes, among other things, are to: (1) measure radiation-induced single event upsets (SEUs) and total-dose degradation of state-of-the-art microelectronic devices (to include VHSIC and GaAs devices) in a known space environment; (2) space qualify advanced technology microelectronic devices for operational DOD satellite systems; and (3) update the static models of the radiation belts and develop the first dynamic models of the high energy particle populations in the near-Earth environment. To accomplish these goals, AFGL has developed a space experiment complement consisting of a microelectronics experiment package (MEP), dosimeters, energetic-particle detectors, space plasma detectors, and wave and field (electric and magnetic) instruments. The experiments are to be flown as a package on the Joint Air Force/NASA Combined Release and Radiation Effects Satellite (CRRES) in FY87. The MEP will record SEUs and radiation degradation as a function of orbital position, particle type, device geometry, device technology, device material, device operating conditions, etc. The other instrumentation will be used to simultaneously measure the space environment. This document gives a brief description of the SPACERAD Program and the instruments to be flown on CRRES. GRA

A RADAR ALTIMETER AND THE VALIDATION OF ITS DATA PRODUCTS OVER ICE SURFACES c35
N. F. McIntyre, R. J. Powell (Science Research Council, Chilton, England), and V. A. Squire (Scott Polar Research Inst., Cambridge, England) *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 3-11 refs Sponsored by UK National Environment Council and UK Science and Engineering Research Council (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

A 13.81 GHz pulsed radar altimeter was flown on a Convair 990 during the Marginal Ice Zone Experiment in the Bering Sea and Greenland Sea. It was used in 10 different operating modes involving combinations of transmit/receive polarizations, nadir-pointing horn antennas and a steerable parabolic antenna. Averaging of returned pulses over nonuniform surfaces was studied in a program to validate altimeter data products over ice surfaces. Correlations of altimeter waveforms with helicopter photography indicate that algorithms for extracting concentration and other sea ice parameters are feasible. Coverage of previously surveyed profiles may also enable better characterization of ice sheet surfaces. The application of results is useful for geophysical interpretation of ERS-1's radar altimeter. THE DEVELOPMENT OF AUTOMATIC METHODS FOR HANDLING SAR IMAGES OVER LAND c35
S. Quegan, N. J. Veck, A. Wright, D. Cruse, and J. Skingley *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 23-29 refs Sponsored by ESA (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Aspects of image handling relevant to a SAR producing images over land, particularly for monitoring agriculture and forestry, are discussed. Identification of ground cover type (classification); change detection; and change interpretation are considered. Segment-growing methods, algorithm performance, and thin line detection as part of the segmentation process are treated. After segmentation, shape and texture of segments can be measured. Work on the former and a comparison of man and machine perceptions of texture are described. Registration requires feature extraction, and results indicate that automatic correlation methods appear viable for speckled images. Calibration, classification, and interpretation of change require more experimental data,

and merging of data from sources apart from the SAR.

DATA COMPRESSION TECHNIQUES FOR REMOTE SENSING DATA HANDLING c60
V. Cappellini and E. Delre *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 31-36 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The application of high efficiency data reduction techniques to remote sensing data processing is presented. Data compression techniques such as using adaptive space sampling, prediction-interpolation, differential pulse code modulation, delta modulation, digital filtering, and transformations (Fourier, Walsh, Haar, Karhunen-Loeve) are reviewed. A technique using the discrete cosine transform, implemented in a fast form is presented. The efficiency of the techniques is evaluated by taking into account the compression ratio, the peak error, and the root-mean-square error with implementation complexity and cost. Results obtained by applying techniques to remote sensing images are reported. Author (ESA)

USE OF SATELLITE IMAGES IN THE DESIGN OF A STANDARD METEOROLOGICAL STATION NETWORK c47
V. Caselles and J. Melia *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 37-40 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The design of the standard meteorological stations of the National Institute of Meteorology of Spain within a thermally heterogeneous area was studied, using temperature and thermal inertia images from the HCMM satellite. The accuracy of the temperature values obtained by correcting the apparent temperature images supplied by satellites depends on the representativity of the places in which a measurement in situ of the temperature is made. It is concluded that although some of the stations are adequately located, others should be relocated. Author (ESA)

APPLICATION OF METEOSAT DATA FOR REMOTE SENSING OF EARTH RESOURCES: EARSEL WORKING GROUP 7 REPORT c47
R. Gombeer *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 43-44 (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Algorithms to map rainfall, net radiation, evapotranspiration, soil moisture availability, thermal inertia, and germination were developed, using METEOSAT data and standard reports from synoptic weather and rainfall stations in arid zones. The algorithms were applied to a test area in Mali to map and monitor these variables during a test period of 18 days at the beginning of the growing season. Results demonstrate the ability of METEOSAT to provide consistent surface meteorological maps over large areas, and unique information in areas where ground stations are scarce or existing measurements unreliable. Results on rainfall, evapotranspiration, germination and biomass were represented in color maps. Author (ESA)

OUTSTANDING RESULTS FROM ONE YEAR'S ACTIVITIES OF THE ESA METRIC CAMERA WORKING GROUP c35
G. Togliatti *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 57-61 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Results of the Spacelab Metric Camera experiment on STS-9 in photogrammetry: (precision, triangulations, point identification and mapping, orthophotos); thematic interpretations; and geological interpretation are summarized. Performance is fairly satisfactory in topographic mapping and in geological and thematic applications, with shortcomings in features identification, mainly due to poor lighting conditions and absence of image motion compensation. The metric accuracy of the images is very good, and in several cases better than expected. Author (ESA)

N86-18360# Technische Univ., Hanover (West Germany). Inst. for Photogrammetry and Engineering Surveys.
AEROTRIANGULATION WITH SPACELAB METRIC CAMERA IMAGES c35
K. Jacobsen and H. Engel *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 63-67 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The geometric conditions of the photogrammetric handling of the Spacelab Metric Camera images are described. Two bundle block adjustments with photos taken by the camera result in sufficient accuracy levels. Unlike usual aerial photographs, Earth curvature has to be respected by adjustment in an orthogonal coordinate system. Author (ESA)

LINE MAP PRODUCTION WITH METRIC CAMERA DATA c35
G. Konecny and W. Schuhr *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 69-73 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The way to derive empiric exposure functions for optimal picture quality and to get the Modulation Transfer Function (MTF) from edge analysis; and photogrammetric evaluations of Spacelab Metric Camera imagery to derive line maps and quasi line maps are dealt with. It is possible to derive sufficient information from high altitude photography to estimate an empiric solar angle and diaphragm depending empiric exposure function for space photography. From edge analyses the MTF shows 40 line pairs per mm for extremely high constrast, which is equivalent to 10 m pixel size on the ground. The imagery is sufficient for topographic mapping on scales of 1:100 000, and meets all requirements of a reference data base for medium scale mapping purposes. Conventional line maps derived from photogrammetric evaluation with analytical plotters and quasi line maps from digital edge-enhanced Metric Camera imagery are promising for map production in developing countries. USE OF METRIC CAMERA FOR LANDSCAPE UNITS: DESCRIP-

TION AND MAPPING c35
Colette M. Girard *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 75-78 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Data from a Spacelab Metric Camera flight in winter over France were used to describe landscape units. The use of stereoscopy enabled the description of data concerning geomorphology, which was not possible when using LANDSAT images. The color infrared film enabled to distinguish and evaluate vegetation. The high resolution permitted to evaluate the field size and the presence of hedges. The main types of land use were recognized and the comparison of landscape units with government publications is encouraging. Author (ESA)

FUTURE MODULAR OPTOELECTRONIC MULTISPECTRAL SCANNER (MOMS) DEVELOPMENTS: DISCUSSION OF IMPROVEMENTS AND POSSIBILITIES TO BE EXPECTED FOR GEOLOGICAL APPLICATIONS c43
J. Bodechtel (Technische Univ., Munich, West Germany) and H. Kaufmann *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 93-96 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

On the basis of digital terrain models and corresponding thematic mapper data, the impact of MOMS instrument developments like Stereo-MOMS and SWIR-MOMS are discussed to optimize parameters especially for geology applications. Choice and width of bands, and application oriented processing concepts are considered. Author (ESA)

N86-18367# Institute for Land and Water Management Research, Wageningen (Netherlands).
EVAPORATION IN DESERTS: PHYSICAL ASPECTS AND REMOTE SENSING TECHNIQUES c47
M. Menenti *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Oppportunities: Systems, Sensors, and Applications Jun. 1985 p 99-106 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Physical processes which contribute to evaporation of bare soil under desert conditions are discussed. A combination equation to calculate actual evaporation when the evaporation front is located below the soil surface is presented. It is shown that thermal convection of soil air in the top soil can occur and that heat and vapor flow can be contrary, because of the density gradient induced by vapor production. The concept of thermal admittance of the surface is discussed in relation to the thermal properties of soil layers. Knowledge of the thermal properties of the soil layers is needed, since soil heat flux is the driving force for evaporation when it takes place below the soil surface. The application of satellite data to study these processes is discussed, and a case-study in the Lybian desert is presented. The relevance of groundwater losses by evaporation for a proper appraisal of groundwater resources in deserts is emphasized. Author (ESA)

Avail: NTIS HC A12/MF A01

The application possibilities of thermal infrared laser spectroscopy for remote sensing were investigated in laboratory and flight campaigns. For the flight measurements, a profiling laser spectrometer with 2 tunable CO2 lasers was used. In the laboratory, the reflection spectra of minerals, soils, rocks, vegetation, water, moistened surfaces and oil spills on water were taken. Flight measurements (soil, rock surfaces, water, irrigated field, vegetation, asphalt) agree with the laboratory results (in-situ measurements). Based on these results, a program for the development of an optical multisensor, combining mid IR laser scanner and near IR-multispectral scanner was started. Author (ESA)

REMOTE SENSING OF OIL ON SEA: LIDAR AND PASSIVE IR EXPERIMENTS c36
F. Castagnoli, G. Cecchi, L. Pantani, I. Pippi, B. Radicati, C. Susini, P. Mazzinghi, and A. Barbaro *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 121-126 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

A compact system for detecting and monitoring oil pollution on the sea from light aircraft using passive infrared remote sensing was developed. Lidar marine environment and pollution monitoring potential was assessed in the laboratory. The low-power airborne system is suitable for day and night operations in quite good weather. It performs a real time detection of the oil, a mapping of the spill, and an identification of its thickest parts. A suitable Lidar system can be composed by an XeCl excimer laser with small dimensions, a low energy consumption, and 50 mJ energy per pulse. The detection system does not require an optical multichannel analyzer, but it is possible to operate with only three interferential filters: one for Raman scattering signal, the others for fluorescence signals, which are sufficient to identify the oil class. SYNTHETIC APERTURE RADAR IMAGING OF THE SEA SURFACE DURING THE PROMESS EXPERIMENT
P. Piau and L. Gray (Canadian Center for Remote Sensing, Ottawa) *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 131-138 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The PROMESS experiment carried out wind and wave measurements on the sea surface with radars operating in the C-band, as with the Active Microwave Instrument aboard ERS-1. A good range of wave heights (ranging from 1 to 7 m) and wind speeds were encountered. The SAR 580 performed measurements with different azimuth angles in C and X-bands simultaneously. Images were obtained from a digital processor and from an optical one. The two sets of images were processed with Fourier and speckle removal technics. The wave length and direction of the long waves is determined with good accuracy. One day featured two wave systems at the same time with different wave lengths and directions. The two systems are well separated and measured by the SAR. The shape of the equivalent monodirectional wave spectrum obtained is very close to the one measured by the waverider. Author (ESA)

THE JOINT RESEARCH COMMITTEE (JRC) PROGRAM ON REMOTE SENSING c43
S. R. GallideParatesi *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 141-150 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The European Economic Communities' Program on Remote Sensing for 1984 to 1987 is oriented towards land and marine applications to contribute to the feasibility study and concept of an advanced information system for agriculture, and of an advanced coastal pollution monitoring system, both using satellite and/or aircraft remote sensing data to be integrated with conventional data. Projects are: Rural Land Use Applied to European Less Favored Areas; Food Agriculture Resources in Sahelian Countries; and Coastal Transport of Pollutants and Oil Characterization by Laser-induced Fluorescence. Exercices of oil detection at sea are organized. A feasibility study on the use of space remotely sensed data as an aid to management of natural disasters is outlined. Author (ESA)

EUROPEAN REMOTE SENSING: FUTURE NEEDS IN EDUCATION c80
Richard K. Bullard *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 151-156 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The education of people in Europe in the subject remote sensing is discussed. The range of education should extend from primary to tertiary and beyond to the public at large. The promotional role of education is to bring remote sensing to public attention in a less formal way and to achieve this there is a need for wide publicity including the press, television, radio, articles in journals and newspapers, videos, books, and slide sets. The cost of promotion may be directly related to the product while the reaction and response to it from the media and the public interest depend partly on its continuing inclusion in National programs and the justification of its applications. GEOPHYSICAL RADAR ALTIMETERS FOR THE 1990'S
H. D. Griffiths and C. G. Rapley *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 157-165 refs Sponsored by ESA (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Satellite-borne altimeter concepts for altimetric mission are described. These include developments in on-board adaptive processing algorithms and advances in radar hardware technology, which allow significantly-increased coverage of land and land ice surfaces. Beam-limited altimeters overcome the fundamental disadvantages of pulse-limited instruments over these surfaces, and allow considerably lower transmitter powers, though at the expense of large antenna structures and severe spacecraft pointing constraints. Concepts for antenna signal processing utilizing multiple antenna beams to give increased spatial coverage as well as improved performance over nonocean surfaces are presented. Author (ESA)

THE VARAN-S: AN AIRBORNE SYNTHETIC APERTURE RADAR FOR RESEARCH IN MICROWAVE REMOTE SENSING c32
D. Vaillant *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 167-174 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The VARAN-S X-Band side-looking airborne radar was designed to simulate satellite-borne radar images to prepare microwave remote sensing users for future satellite data analyses, and to help in the development of satellite-borne SAR. It was experimented in real aperture mode during the Marginal Ice Zone experiment. The VARAN-S is planned to work in SAR mode. The digital raw data, recorded on-board over a swath width > 10 km, gives 3 m resolution without multilook, or 9 m using 9 looks. Two polarizations (H and V) are available. Author (ESA)

TECHNIQUES FOR ACHIEVING WIDE SWATH COVERAGE WITH SPACEBORNE SAR SYSTEMS
M. A. Brown and D. J. Smith *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 175-180 refs (For primary document see N86-18351 09-19)
(Contract ESTEC-5672/83/NL-GM(SC))
Avail: NTIS HC A12/MF A01

Designs for increasing SAR coverage beyond 200 km are discussed using figures for ERS-1 as baseline. The technological demands of each concept are assessed. Although for the extended antenna system the critical area is antenna technology, processing also needs to include multiple range looks. Squinted SAR systems require significantly more complex processing, increased pulse bandwidth, and slightly longer antennas. These two systems provide continuous coverage of a wide swath unlike the others which only cover discrete swaths. The multiple receive beam technique requires little new technology except for signal reception where two (or more) antennas or complex multiple beam formation is required. The dual pulse system requires large amounts of power which could prove difficult to produce. The multiple SAR systems require isolation of separate systems and storage and deployment of two antennas. Author (ESA)

DIFFERENT PROBLEMS OF SPACE STEREOSCOPIC OBSERVATION
A. Moccia and S. Vetrella *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 181-187 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Geometric aspects connected to along and cross-track stereoscopic observation from space using solid state linear arrays are discussed. In considering along-track viewing, the procedure adopted to simulate the geometric observation from the fore and aft sensors is described, and residual geometric errors, present in each pair of homologous ground lines, are examined. It is shown that the nature of the residual geometric errors, deriving mainly from the different projections of the fore and aft cameras on the Earth's ellipsoid, requires per line and per pixel corrections of the stereoscopic pair. For cross-track viewing, the geometric errors deriving from the perspectives relative to different orbits are computed. These perspectives cause a rotation between the steroscopic pair, and a considerable tangential scale distortion. The need to elaborate preprocessing systems which take into account the development of satellite position and attitude determination systems and use few ground control points is emphasized. REMOTE SENSING AND ARCHAEOLOGICAL RESEARCH IN THESSALY, GREECE. NEW PROSPECTS IN ARCHAEOLOGICAL LANDSCAPE c43
E. Barisano and B. Helly *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 203-209 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

The use of satellite data in archaeological research in Thessaly (Greece) in a methodological study to determine the interpretation processes concerning spatial imagery is described. The study involved determining the physical factors in order to understand the ancient spatial organization in the lower Enipeus valley, connected with the distribution and density of identified sites with signs of human occupation. An archaeological prospection strategy was formulated from spectral, textural, and structural indicators deduced from satellite data in the eastern plain of Larisa (ancient lake Karla). Author (ESA)

LONG LINEAR FEATURES OBSERVED ON THE ALPINE OROGEN AND THEIR COMPARISON WITH SOME GEOPHYSICAL DATA c48
R. Cassinis, C. M. Marino, and F. Pinali *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 217-219 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

A map of linear features observed on the Alpine orogen was drawn on 1:1,000,000 scale, using multitemporal and multispectral satellite imagery (MSS LANDSAT). The total field, containing linears with L > or = 15 km, was filtered in length and azimuth, obtaining different maps (6 azimuthal and 1 of long linears with L > or = 50 km. The filtered maps were compared with geophysical data having a similar uniformity of information and drawn on the same scale. All maps were analyzed according to geological domains. It is believed that the long linears are the surface reflection of deep crustal structures. Author (ESA)

MONITORING OF GROUND FRACTURES CAUSED BY VOLCANIC ERUPTIONS USING REMOTE SENSING TECHNIQUES c46
A. L. Geraci, G. LaRosa, T. Caltabiano (CNR, Catania, Italy), and E. LoGiudice (CNR, Catania, Italy) *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 221-227 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

During the 1983 eruption of Mt Etna in Sicily, an investigation using remote sensing techniques was carried out over the southern side of the volcano to look at the linear development and the thermal behavior of ground fractures connected with active vents. The survey used thermal infrared imagery. It is proved that this kind of investigation makes it possible to locate thermal active fractures in the ground in active volcanic areas. It is possible to determine the length and direction of the fractures. It is also useful for the surveillance, study, and clearer representation of the eruption. Author (ESA)

THE ERS-1 OBSERVATIONS OF LAKES FOR CLIMATE RESEARCH c47
I. M. Mason, C. G. Rapley, F. A. Street-Perrott (Oxford Univ.), and M. Guzkowska (Oxford Univ.) *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 235-241 refs Sponsored by ESA and UK Science and Engineering Research Council (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

Prospects for remote sensing of lake volume fluctuations for climate research using ERS-1 are reviewed. The importance of monitoring lake volumes for climate and paleoclimate research, and how closed lakes respond to climate are considered. It is shown that it is necessary to monitor levels and areas simultaneously, which can be achieved using the Radar Altimeter (RA) and the Along Tracking Scanning Radiometer (ATSR) on ERS-1. For any frequency band the ATSR and RA can measure small (< 10 %) aridity variations. The ATSR has virtually global coverage, and with a reasonably long repeat track period (35 days) the RA could measure up to 100 closed lakes globally and many more open ones. The ERS-1 can provide an important climate record on a global scale. Author (ESA)

RELATIVE VERTICAL POSITIONING USING GROUND-LEVEL TRANSPONDERS WITH THE ERS-1 ALTIMETER
R. J. Powell *In* ESA Proceedings of EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications Jun. 1985 p 243-246 refs (For primary document see N86-18351 09-19)
Avail: NTIS HC A12/MF A01

A technique for using the ERS-1 altimeter to measure the relative vertical position of land-based transponders and the ocean geoid on 2000 km long segments of the satellite ground track is proposed. The absolute position accuracy is similar to that of the laser tracking stations, relative accuracy may be of the order of a few centimeters, and measurements of changes in transponder elevation during the 3 yr satellite life may be at the sub-centimeter level. The opportunity for such measurements is provided by exploiting together very accurate range measurements made to ground-based transponders and the demonstrated constancy of form of satellite short-arc orbits repeated over an identical ground track. Altimetric vertical position measurements of this accuracy make possible techniques for altimeter calibration, sea-state bias measurements, orbit measurement and seismic/geodetic study. Author (ESA)

Avail: NTIS HC A12/MF A01

An astronomical data base, offering on-line query, consisting of a cross-identifications dictionary for astromonical object names, observational data, and bibliographical references collected since 1950, for 600,000 stars and 70,000 galaxies is presented. Use in the HIPPARCOS project is described. Author (ESA)

N86-18395# Observatoire de Paris-Meudon (France).
PRESENT STATUS OF THE INPUT CATALOG c60
A. E. Gomez and F. Crifo *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 57-61 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The HIPPARCOS Input Catalog will contain 100,000 stars. About 700,000 stars (with redundancies), from 214 proposals, were received, and 60,000 stars were added for the survey; but, for different reasons (stars deleted by proposers, unsuitable proposals, etc.) only 520,000 stars were considered. The procedure to handle these stars and merge them into a unique list without repetitions is described. This work progressed very quickly thanks to the intensive use of the SIMBAD Data Base. The present status of the list which integrates 99% of the proposed stars (including the survey) is given as well as statistics on magnitude and sky and spectral type distributions. The next step to construct the first version of the Input Catalog is discussed using two examples of realistic lists. This analysis shows that the inclusion of faint stars has to be reviewed carefully. Author (ESA)

N86-18396# Observatoire de Paris-Meudon (France).
THE INCA DATA BASE: SUB-BASE FROM SET OF IDENTIFICATIONS, MEASUREMENTS AND BIBLIOGRAPHY FOR ASTRONOMICAL DATA (SIMBAD) c60
D. Morin and F. Arenou *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 63-66 (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The INCA Data Base contains all proposed HIPPARCOS stars, including survey stars (around 210,000 stars). It is a subset of the SIMBAD data base. Information contained within the INCA Data Base for SIMBAD stars and non SIMBAD stars (data taken from SIMBAD and specific INCA data being progressively added during the preparation of the mission) is described. The SIMBAD software as well as specific INCA software are mentioned. Author (ESA)

DEFINITION OF THE SURVEY c60
F. Crifo, C. Turon, and M. Grenon (Geneva Observatory) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 67-70 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The need to define a limiting magnitude for the 60,000 bright stars, regularly distributed over the whole sky, requested in the HIPPARCOS Input Catalog for satellite real time attitude determination and data reduction is discussed. The limiting magnitude of this survey should be clearly defined in order to preserve further statistical uses of the sample. The limiting magnitude will be a function of galactic latitude and spectral types. The behavior of various spectral types through the first step simulation process (use of the pressures) is studied; the influence of other proposals on survey star selection is pointed out. Author (ESA)

N86-18398# Geneva Observatory (Switzerland).
SIMULATIONS: THE ROLE PLAYED BY STATIC PRESSURES c60
B. Nicolet and M. Creze (Observatoire de Besancon, France) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 75-77 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

A fast procedure to evaluate the pressure borne by a star S proposed for HIPPARCOS is proposed. The pressure is the quotient of the sum of target-times for stars with a better priority than S in a neighborhood of S by the available observing time in this neighborhood. Although rather crude, this concept proves to be very useful for refined simulations and to prepare programs of ground-based observations. Author (ESA)

N86-18399# Observatoire de Besancon (France).
OPTIMIZING THE INPUT CATALOG THROUGH SIMULATIONS **c60**
A. Creze *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 79-82 ref (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Three simulation packages and an iterative process were developed to assist the choice of 100,000 stars from 250,000 candidates for the HIPPARCOS Input Catalog. Star densities and observing time allocations are initially imposed from overall a priori considerations (ecliptic latitude, total observing time) but, after iterations, when trying to include high priority stars, distortions to the a priori distributions are imposed. Distortions can create bad observability conditions so that target accuracy is not reached. The larger the accepted deviations to target accuracies, the closer the star selection will match scientific targets. It is possible to control pressure threshold modifications to set accuracy degradation limits. Author (ESA)

N86-18400# Observatoire de Paris-Meudon (France).
EXPECTED FULFILLMENTS OF OBSERVATION PROPOSALS VERSUS ESA PRIORITY **c60**
C. Turon, B. Nicolet (Geneva Observatory), and M. Creze (Observatoire de Besancon, France) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 83-86 (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The results of the HIPPARCOS mission static simulation on L3-1 are examined with respect ot ESA priority levels, magnitudes, and proposals. The fulfillment of survey, International Reference Star Program, and stars for extragalactic links is studied. The main trends are strong drops in fulfillment with ESA priority and with magnitude. The effect on proposals of these two tendencies is shown, and actions suggested. Author (ESA)

N86-18401# Observatoire de Strasbourg (France). Centre de Donnees Stellaires.
ASTROPHYSICAL ASPECTS OF THE CONTENTS OF THE INPUT CATALOG **c60**
D. Egret and E. Gomez (Observatoire de Paris-Meudon, France) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 87-90 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Aspects of the astrophysical contents of the HIPPARCOS Input Catalog are illustrated through comparison of the complete merged file L3 with the file L3/SIM obtained from the first simulation. The upper part of the HR diagram; the red nearby stars; the distance scale; problems of galactic structure; old population stars; and binary stars with known orbit are considered. Analysis shows, besides a general satisfactory percentage of inclusion for most important programs, an important limitation affecting the faintest red stars, good candidates for parallaxes, but penalized by the observing strategy. Author (ESA)

N86-18402# Centre National d'Etudes Spatiales, Toulouse (France).
THE HIPPARCOS INPUT CATALOG (INCA): SIMULATION OF OBSERVATIONS OVER A LONG PERIOD [HIPPARCOS-INCA: SIMULATION DES OBSERVATIONS SUR UNE LONGUE PERIODE] **c60**
J.-C. Feaugas *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 91-96 refs In FRENCH (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Preparation of a HIPPARCOS simulation catalog; the observation simulation programs; and sample results (maps, statistics) are discussed. The program for allocating observing time is outlined. Static pressure and ESA priority attribution of selected and rejected stars are shown. Number of observations as a function of priority, pressure, and magnitude is given. Author (ESA)

N86-18403# Observatoire de Besancon (France).
OPTIMIZING THE OBSERVING STRATEGY THROUGH SIMULATIONS **c60**
M. Creze, M. Chareton, and E. Oblak *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 97-99 ref (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The HIPPARCOS onboard observing strategy was simulated assuming various policies for assigning values to parameters. Simulations work all along the mission for small test regions. The efficiency of the policy is assessed by the final distribution of accuracy amongst test stars. Results suggest that simple rules of parameter allocation may partly correct the distortion of the observing strategy response on dense fields. Additional optimization based on time dependent parameters and special rules for overcrowded fields are discussed. Author (ESA)

EXISTING DATA ON CANDIDATE STARS FOR THE HIPPARCOS INPUT CATALOG: PRESENT STATUS AND DEVELOPMENTS [LES DONNEES EXISTANTES POUR LES ETOILES CANDIDATES AU CATALOGUE D'ENTREE: STATUT ACTUEL ET DEVELOPPEMENTS] **c60**
D. Egret *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 105-107 refs In FRENCH; ENGLISH summary (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The analysis and the compilation of photometric and astrophysical data for the HIPPARCOS Input Catalog stars is described. Statistics regarding the number of available measurements for the HIPPARCOS stars in the main catalogs of astrophysical interest are given. Author (ESA)

N86-18405# Lausanne Univ. (Switzerland). Inst. d'Astronomie.
PHOTOMETRIC DATA RELATED TO THE FORMATION OF THE INPUT CATALOG **c60**
J.-C. Mermilliod and M. Mermilliod *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 111-112 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Files for the photometric systems presenting a significant number of stars with respect to the formation of the Input Catalog were obtained: UBV, uvby, WUBVL, DDO, RO systems. The processing of the UBV data is described. No quantitative information is given as concerns the available photometric data for the Input Catalog since the intersection is not done. Author (ESA)

N86-18406# Geneva Observatory (Switzerland).
STANDARD STARS FOR THE ON-ORBIT PHOTOMETRIC PAYLOAD CALIBRATION **c60**
M. Grenon *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 113-116 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The needs on photometric data for the HIPPARCOS prelaunch, mission and postmission phases are presentd. The new observations tend to optimize the mHp prediction as well as the

derivation of physical stellar parameters complementary to HIPPARCOS astrometric results. The observing programs are defined according to spectral type, magnitude, declination, and right ascension intervals adapted to the selected photometric system, telescope size and site, and observing period.

NEW GROUND-BASED PHOTOMETRIC OBSERVATIONS c35
M. Grenon *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 117-122 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

It is shown that using existing ground based photometric data it is feasible to produce a set of secondary standard stars for HIPPARCOS photometric calibrations, with a density over the sky sufficient for monitoring the short and long-term variations of the main mission detection chain. The final accuracy on Hp is slightly lower than required for red stars, i.e., 0.03 instead of 0.02, whereas that on (B-V) is better with se = 0.01 mag. The faint standards problem can be solved by ground based observations prior to satellite launch. The Tycho calibration should not present any difficulty regarding standard availability as the expected number of standards is more than double when the conditions on pressure and Input Catalog inclusion are relaxed.

SPECIFIC PROBLEMS RELATED TO VARIABILITY c90
M.-O. Mennessier *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 127-129 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The discordance between the predicted and observed maxima and minima of stellar luminosity is discussed. A sample of light curves observed for 30yr shows how they deviate from the mean curves. About 1200 HIPPARCOS stars present a large amplitude of variability and their luminosity can be lower than the threshold of the satellite detection during a part of their period. These problems limit the capacities of observation according to the types of variability.

CORRECTION OF VEILING GLARE IN HIPPARCOS OBSERVATIONS [LES CORRECTIONS DE L'EFFET DE VOILE (VEILING GLARE) DANS LES OBSERVATIONS HIPPARCOS]
M. Froeschle, J. Kovalevsky, and F. Mignard *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 133-136 refs In FRENCH; ENGLISH summary (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The impact of veiling glare on HIPPARCOS Input Catalog and data reduction is discussed. The expected number of veiling glare stars as a function of the magnitude of the program star for a unique field of view and for the combined fields is investigated. An algorithm to process observations perturbed with veiling glare, which allows the five parameters of the program star to be obtained is outlined. The structure of the algorithm leads to an estimation of the phase extraction allowing for the signal of the perturbing star and the uncertainty of its actual position on the IFOV. The results are plotted as contour lines in a (Delta m,r) diagram giving the degradation of the phase determination with respect to the theoretical accuracy which could be obtained were the star unaffected by veiling glare.

STARS IN THE DIRECTION OF THE MAGELLANIC CLOUDS c90
L. Prevot *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 137-139 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The use of HIPPARCOS to estimate of systemic tangential motions of the Magellanic Clouds (MC) is discussed. In the most favorable case, it is possible to detect motions of 250 to 300 km/sec on the basis of a 2.5 yr mission. If obtained, these data would allow to correct the rotation of the LMC for its transverse motion, to assess possible two-body structure of the SMC, and to investigate the nature of the inter-Clouds bridge and the reality of a connection between the LMC and the Galaxy.

N86-18414# Belgian Royal Observatory, Uccle.
NEW WIDE DOUBLE STARS IN THE HIPPARCOS INPUT CATALOG c90
O. Nys *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 161-163 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The identification of all double stars in the HIPPARCOS Input Catalog is described. By using a Catalog of the Components of

Double and Multiple stars (CCDM) established on the basis of the Index (1976,5), 22,952 of the 206,999 entries of the provisional list L2-V were identified. In order to ensure that all double and multiple stars existing in the L2-V list are properly detected, the list of all couples of entries of the L2-V, showing separations < 100' was compiled. Comparison of this list with the CCDM identified L2-V stars reveals 2,124 pairs of stars which do not exist in the CCDM. Examination shows that : 224 pairs are redundancies left in the L2-V list; 300 pairs have insufficiently accurate positions to make possible their consideration, and 1,300 real wide double stars are found. Author (ESA)

N86-18415# Belgian Royal Observatory, Uccle.
OBSERVABILITY OF SPECTROSCOPIC DOUBLE STARS BY HIPPARCOS [OBSERVABILITE PAR HIPPARCOS DES ETOILES DOUBLES SPECTROSCOPIQUES] **c90**
J. Dommanget *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 165-170 refs In FRENCH; ENGLISH summary (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Spectroscopic binaries were proposed for observation by HIPPARCOS. Their admittance in the Input Catalog is subordinated to the behavior of their photocenters of which the orbital oscillation on the sky must remain inside narrow limits bound to the accuracy of the HIPPARCOS observation technique. It is shown that at least 90% of the known spectroscopic orbital binaries fulfill this requirement. Author (ESA)

N86-18416# Bureau des Longitudes, Paris (France).
MINOR PLANETS IN THE HIPPARCOS PROGRAM [PETITES PLANETES DU PROGRAMME HIPPARCOS] **c91**
A. Bec-Borsenberger *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 175-177 refs In FRENCH; ENGLISH summary (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Seven proposals for HIPPARCOS concerning 63 minor planets were accepted by ESA. Owing to the motion of these objects, their positions are entered into the Input Catalog as ephemerides. These ephemerides are computed by numerical integration; the initial conditions are published orbital elements. A Chebychev polynomial representation is used for the coordinates and the magnitude of the minor planets. The ephemerides were compared with 500 observations. For some minor planets the O-C are > 1.5'. For improving the integration constants by least squares method, the observations of three observatories were compared with the observations published by the Minor Planet Center in Cincinnati. The magnitude epheremis is computed by the classical formula, but it is possible to include in rhe program the procedure for calculation of magnitude. Author (ESA)

CARLSBERG AUTOMATIC TRANSIT CIRCLE OBSERVATIONS FOR INCA **c90**
L. V. Morrison and P. Gibbs *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 197-199 (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

For the HIPPARCOS mission, the Carlsberg Automatic Transit Circle (CATC) of the La Palma observatory is observing 2700 stars between 0 and -25 deg which have little or no astrometric history. The list mainly comprises BD/CD positions which have an accuracy of 1'. The CATC program also includes 143 radio stars, 858 stars for linking extragalactic sources for ground based astrometry, and 15,000 SAO stars with poor positions. Author (ESA)

N86-18422# Copenhagen Univ. (Denmark).
MERIDIAN OBSERVATION OF THE FAINT STARS PROPOSED FOR HIPPARCOS **c90**
E. Hoeg *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 201-202 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

It is proposed to release the whole list of 210,000 stars proposed for HIPPARCOS so that meridian observers could obtain positions, especially of those non-HIPPARCOS stars which are too faint for observation with TYCHO. Only half of the proposed stars can be accomodated in the final observing list. The other

half is, however, also a sample of stars for which it would be of great astrophysical and astrometric interest to obtain positions and proper motions. Author (ESA)

N86-18423# Naval Observatory, Washington, D.C.
THE STATUS OF THE SRS **c90**
J. A. Hugues and C. A. Smith *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 203-205 (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The current status of the Southern Reference Stars (SRS) Program insofar as it may impact upon the Input Catalog for HIPPARCOS is reviewed. The background of the program, scientific considerations regarding the reference system, and a meeting of the SRS committee are described. Author (ESA)

N86-18424# Observatoire de Haute Provence, Forcalquier (France).
RADIAL VELOCITIES FOR HIPPARCOS WITH THE FEHRENBACH OBJECTIVE PRISMS [VITESSES RADIALES POUR HIPPARCOS AVEC LES PRISMES-OBJECTIFS DE FEHRENBACH] **c35**
C. Fehrenbach, R. Burnage, and M. Duflot (Observatoire de Marseille) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 213-216 refs In FRENCH (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

A 60 cm objective prism was used to obtain stellar radial velocities for the HIPPARCOS mission. An 18 cm prism, and a spectrograph were also used. Data for hot stars (< or = F5) of magnitude < 9.5 are collected. Author (ESA)

N86-18425# Geneva Observatory (Switzerland).
RADIAL VELOCITY MEASUREMENTS OF LATE-SPECTRAL-TYPE STARS **c90**
M. Mayor *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 217-218 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Two spectrometers yielded 25,000 measurements for 10,000 stars likely to be included in the Input Catalog for the HIPPARCOS mission. The measurements represent 20% of the total of cold stars of the catalog. The programs covered deficient F-stars, evolved F-stars, the solar neighborhood, halo stars, late spectral supergiant stars, and dwarfs and giants in open clusters. Author (ESA)

N86-18426# Barcelona Univ. (Spain). Dept. de Fisica de la Tierra y del Cosmos.
COMPLEMENTARY PHOTOMETRIC OBSERVATIONS FOR HIPPARCOS **c90**
J. Torra, F. Figueras, J. M. Paredes, G. Rossello, and F. Sala *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 219-221 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The results for 5 colors U, B, V, R, I photometry of 90 stars belonging to Gliese's Catalog of Nearby Stars or to its supplements and not having a complete set of photometric data are presented. The observational program was undertaken to enlarge the photometric data necessary for the HIPPARCOS mission through a list of stars which by their special interest should be included in the HIPPARCOS observing list. Author (ESA)

N86-18427# Copenhagen Univ. (Denmark).
OVERVIEW OF TYCHO DATA ANALYSIS **c90**
E. Hoeg *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 225-230 refs Sponsored by Danish Space Board (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

In TYCHO data analysis (2 million stars) photon counts are processed to detect slit transits exceeding a certain signal-to-noise ratio. These detections or transits, collected from, e.g., 6 months of observation, are identified with stars of a TYCHO Input Catalog (TIC) in a subsequent process. A limiting magnitude of (B+V)/2 = 11-0 is expected within small areas of 12 x 12 arcsec sq centered on each TIC position, corresponding to a TYCHO output catalog of at least 500,000 stars. The typical accuracy of a mean value in the output catalog is 0.03 arcsec and 0.03 mag for TYCHO astrometry and photometry, respectively. Author (ESA)

N86-18428# Observatoire de Strasbourg (France). Centre de Donnees Stellaires.
THE TYCHO INPUT CATALOG AND THE GUIDE STAR CATALOG OF THE SPACE TELESCOPE **c60**
D. Egret *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 231-233 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

The identification of the stars observed by TYCHO is based on an a priori catalog of stars, the TYCHO Input Catalogue (TIC) complete to B = 12.5 and containing 2 million stars. The main source for TIC is the Guide Star Catalog (GSC) being produced for the Space Telescope, which is expected to be complete up to 15th magnitude. It will be cross-identified (for the bright part) with the SIMBAD database. The production and the contents of the TIC is presented and the possible use of the GSC for checking the coordinate of the final HIPPARCOS Input Catalog is discussed. Author (ESA)

N86-18429# Cambridge Univ. (England). Inst. of Astronomy.
REPORT BY SUBGROUP 2130 (LINK TO EXTRAGALACTIC REFERENCE OBJECTS) **c90**
A. N. Argue *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 237-240 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Methods for linking the positions and proper motions of stars measured by HIPPARCOS to a quasi-inertial system based on extragalactic objects are reviewed. The core catalog of extragalactic objects is a list of 235 radio sources. Virtually every source in this list is optically too faint for direct measurement by HIPPARCOS so that the link must be established indirectly using large ground based telescopes or the Hubble Space Telescope. Bright optical quasars and the Lick and Tautenburg photographic measurements of proper motions of stars relative to galaxies also provide useful links for proper motions (rotation stoppers). Certain radio stars and masers are directly observable by HIPPARCOS. Those having suitable radio and optical properties provide a very powerful method of linkage. Author (ESA)

N86-18430# Astronomische Rechen-Institut, Heidelberg (West Germany).
A CRITICAL EXAMINATION OF RADIO STAR DATA **c90**
H. G. Walter, C. deVegt (Hamburger Sternwarte), and Th. Kleine (Hamburger Sternwarte) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 241-245 refs (For primary document see N86-18388 09-19)
(Contracts BMFT-01000421; BMFT-01000138)
Avail: NTIS HC A12/MF A01

Data on 275 objects subdivided into confirmed, suspected, and potential radio stars was examined for selection of stars which under HIPPARCOS observing conditions promise results accurate enough to compete with positions and proper motins expected from radio interferometric techniques. Optical suitability is assessed by apparent magnitude and by taking into account the effects of very narrow binary components, but also of those several seconds of arc apart. Stars showing strong magnitude variations combined with long periods of the light curve are considered objects deserving special caution, as are masers due

to possible noncoincidence of radio spots and optical emission centers. Radio suitability is inferred from the estimated total fluxes unless details on the radio structure are known. The consequences of the step by step application of the criteria on number and distribution of the radio star in the current list established for HIPPARCOS observations are illustrated. Author (ESA)

N86-18431# Hamburger Sternwarte (West Germany).
RELATING THE HIPPARCOS REFERENCE FRAME TO THE RADIO REFERENCE FRAME VIA VERY LARGE ARRAY (VLA) MEASUREMENTS OF THE PRECISE POSITION OF STELLAR RADIO EMISSION **c89**
C. deVegt (Naval Research Lab., Washington D.C.), K. J. Johnston, and D. P. Florkowski (Naval Observatory, Washington D.C.) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 247-249 refs (For primary document see N86-18388 09-19)
(Contract BMFT-01000138)
Avail: NTIS HC A12/MF A01

Use of precise radio positions for a large number of stars from the Very Large Array for HIPPARCOS is proposed. From the emission of 100 stars relative to background extragalactic radio sources, the HIPPARCOS reference frame can be related statistically to the radio reference frame at the fraction of a mas level. Using radio stars, the two principal problems of the linking process, i.e., determining residual rotation and position zero point, can be solved. Techniques, and results from measurements are discussed. The lack of observations in the Southern Hemisphere is considered. Author (ESA)

MILLIARCSECOND STRUCTURES, VLBI AND OPTICAL POSITIONS OF 8 HIPPARCOS RADIO STARS **c90**
J.-F. Lestrade, R. A. Preston, Y. Requieme (Observatoire de Bordeaux), M. Rapaport (Observatoire de Bordeaux), and R. L. Mutel (Iowa Univ.) *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 251-253 refs Sponsored by NASA (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01 CSCL 22B

Mark 3 VLBI observations show evidence for complex radio structures on the milliarcsecond angular scale of 8 HIPPARCOS radio stars. Their VLBI positions and optical positions measured with the automatic meridian circle in Bordeaux are presented. Comparison between the optical and VLBI positions of these stars shows that the JPL VLBI reference frame and the FK4 fundamental catalog are aligned at the level of precision of the optical measurements (0".05). Author (ESA)

N86-18433# Barcelona Univ. (Spain). Dept. de Fisica de la Tierray del Cosmos.
RADIO OBSERVATIONS OF HIPPARCOS STARS **c89**
R. Estalella, J. M. Paredes (Inst. Nacional de Tecnico Aeroespacial, Madrid), and A. Rius *In* ESA The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation Aug. 1985 p 255-257 refs (For primary document see N86-18388 09-19)
Avail: NTIS HC A12/MF A01

Use of radio stars to link the HIPPARCOS reference frame to extragalactic objects through VLBI observations is discussed. An observational program monitoring flux density of radio stars was carried out. From a preliminary list of radio stars with optical characteristics suitable for HIPPARCOS observation objects with good characteristics for VLBI observation were selected, mainly RSCVn stars. The NASA DSN 64 m antenna in Madrid was used for stimultaneous flux density determination at 13 and 3.6 cm or at 2 circular polarizations at 3.6 cm. A total of 30 radio stars were observed. Radaio stars are found to be circular polarized up to 20%. Author (ESA)

REAL TIME: AUTOMATIC VEHICLE POTENTIAL DETERMINATION FROM ESA MEASUREMENTS. PART 1. THE COUNT RATIO ALGORITHM
S. L. Spiegel, R. J. Saistrick, N. A. Saflekos, M. S. Gussenhoven, and H. A. Cohen 8 May 1985 20 p
(AF Proj. 7661)
(AD-A160459; AFGL-TR-85-0103(1); AFGL-ERP-916(1)) Avail: NTIS HC A02/MF A01 CSCL 09/2

The problem of spacecraft charging at high altitudes is an important one for Air Force applications; indeed a major effort (SCATHA Project) has been undertaken to understand this phenomenon. Quite simply, when a space vehicle at geosynchronous orbit, interacting with its plasma environment, acquires a high negative potential (of the order of 1/2 kV), it is possible that onboard instrumentation will be damaged by electrical discharge between differentially charged surfaces of the spacecraft. Thus it is important to activate a discharge mechanism as soon as a dangerously high potential develops. This means it is necessay to have a reliable method of determining the real time vehicle potential, or more specifically, distinguishing whether or not the potential has reached or exceeded critical levels. An algorithm incorporating an onboard microprocessor to analyze data obtained by the vehicle, and determine the extent of charging, is desirable. Computational simplicity and speed are important considerations in the design of such an algorithm. Examination of data from the P78-2 satellite has indicated that electrostatic analyzer (ESA) ion count data, could serve as input to an algorithm designed to fulfill the aforementioned objectives. The development and testing of one such algorithm, referred to as the count ration algorithm, are described. GRA

METALLIC INDUCTION REACTION ENGINE Final Report, 1 Jul. 1983 - 30 Jun. 1984
P. P. Mongeau and D. P. Hart 28 Dec. 1984 143 p
(Contract F49620-83-C-0126)
(AD-A160137; EML-85-AF001; AFOSR-85-0773TR) Avail: NTIS HC A07/MF A01 CSCL 21/3

Advances in electrical propulsion technology have inspired a variety of approaches for orbit raising propulsion. One such technique, the metallic induction reaction engine, uses a solid metallic reaction mass rather than a gas or plasma to achieve high thrust density and efficiency. The reaction mass is inductively accelerated by a magnetic pulse coil, thereby eliminating the problems of erosion and wear. The basic mechanisms and limits of the conversion of electrical energy into kinetic energy by the metallic induction reaction engine are analyzed. To facilitate this, a single shot experimental engine was constructed and operated over one hundred times, including several tests with conversion efficiencies greater than 50%. Further analyses were performed by developing a numerical model. The velocity and current predicted by this model agree to within 15% of the experimental data over the entire range of operation. Extrapolation to higher performance operation has revealed that there are adverse coupling effects and circuit impedance effects which can limit the ultimate performance of the metallic induction reaction engine. GRA

ANTIPROTON ANNIHILATION PROPULSION Final Report, 1 Apr. 1984 - 31 Jan. 1985
R. L. Forward Sep. 1985 212 p
(Contract F04611-83-C-0046)
(AD-A160734; UDR-TR-85-55; AFRPL-TR-85-034) Avail: NTIS HC A10/MF A01 CSCL 21/3

Antiproton annihilation propulsion is a new form of space propulsion, where milligrams of antimatter are used to heat tons of reaction fluid to high temperatures. The hot reaction fluid is exhausted from a nozzle to produce high thrust at high specific impulse. This study was to determine the physical, engineering, and economic feasibility of antiproton annihilation propulsion. The conclusion of the study is that antiproton propulsion is feasible, but expensive. Because the low mass of the antimatter fuel more than compensates for its high price, comparative mission studies show that antimatter fuel can be cost effective in space, where even normal chemical fuel is expensive because its mass must be lifted into orbit before it can be used. Antiproton annihilation propulsion is mission enabling, in that it allows missions to be performed that cannot be performed by any other propulsion system. GRA

FIRE-RETARDANT DECORATIVE INKS FOR AIRCRAFT INTERIORS
D. A. Kourtides, Z. Nir (Makhteshim, Ltd., Beersheeba, Israel), and J. A. Mikroyannidis (Patras Univ., Greece) Dec. 1985 14 p refs
(NASA-TM-88198; A-85414; NAS 1.15:88198) Avail: NTIS HC A02/MF A01 CSCL 07C

Commercial and experimental fire retardants were screened as potential fire retardants for acrylic printing inks used on aircraft interior sandwich panels. The fire retardants are selected according to their physical properties and their thermostabilities. A criterion for selecting a more stable fire retardant is established. Thermogravimetric analysis (TGA) and differential scanning calorimetry (DSC) are used to determine thermostabilities. Results show that the fire retardant formulations are more thermally stable than the acrylic ink control. It is determined that an ink formulation containing a brominated phenol and carboxy-terminated butadiene acrylonitrile which has been modified with a brominated polymeric additive (BPA), yields the highest limiting oxygen index (LOI) of all the compounds tested. All of the fire-retardant formulations have a higher oxygen index than the baseline acrylic ink. Author

GRAPHITE FIBER INTERCALATION: BASIC PROPERTIES OF COPPER CHLORIDE INTERCALATED FIBERS
Donald A. Jaworske and John D. Miller (Kenyon Coll., Gambier, Ohio) 1986 16 p refs Presented at the Spring Meeting of the American Physical Society, Las Vegas, Nev., 31 Mar. - 4 Apr. 1986
(NASA-TM-87217; E-2877; NAS 1.15:87217) Avail: NTIS HC A02/MF A01 CSCL 07D

In situ resistance measurements were used to follow the intercalation of copper chloride in pitch-based fibers. Subsequent single fiber resistivity measurements reveal a large range of resistivities, from 13 to 160 micro-ohms cm. Additional density measurements reveal a bimodal distribution of mass densities. The dense fibers have lower resistivities and correspond to the stage III compound identified by X-ray diffraction. Neither resistivity nor density correlate with diameter. Both energy dispersive spectroscopy and mass density data suggest that excess chlorine resides in the intercalated fiber, resulting in a stoichiometry of C4.9n CuCl2.5 (where n is the stage number) for the denser fibers. Finally, thermogravimetric analysis shows a 33 percent loss in mass upon heating to 700C. This loss in mass is attributed to loss of both chlorine and carbon. Author

PREPARATION OF P-N-H AND p-p COMPOUNDS FROM A SILYLATED AMINO(METHYLENE) PHOSPHINE
B. L. Li and R. H. Neilson 3 Oct. 1985 17 p
(Contract N00014-79-C-0632)
(AD-A159829; TCU/DC/TR-85-01) Avail: NTIS HC A02/MF A01 CSCL 07/2

Secondary amines react with the silylated amino(methylene)-phosphine (Me3Si)2NP=CHSiMe3 doublebond (1) by a complex process involving Si-N bond cleavage as well as addition tot he P-C doublebond. Thus, treatment of 1 with Et2NH yields either the N-H phosphine Me3SiN(H)P(NEt2)CH2SiMe3 (2) or the unexpected P super V-pIII product Me3SiN-doublebond P(NEt2)(CH2Me3)-P(CH2SiMe3)N(SiMe3)2 (3), depending upon the reaction stoichiometry. In two separate experiments with mechanistic implications: (a) 2 was prepared from the reaction of Et2NH with (Me3Si)2NP(NEt)CH2SiMe3 (la), the presumed intermediate in the Et2NH/1 reaction, and (2) 3 was prepared directly by addition of the N-H compound 2 to the (methylene)phosphine 1. Compound 2 is smoothly oxidized by CCl4 to the P-chlorophosphoranimine Me3SiN-P(Cl)(NEt2)CH2SiMe3 doublebond (4) or deprotonated by n-BuLi. The ambident anion thus formed reacts with the chlorophosphines Ph2PCl and (Me3Si)2NP(Cl)CH2SiMe3 to yield the P-P products Me3SiN-doublebond P(NEt2)(CHSiMe3)-PPh2 (5) and compound 3, respectively. VISCOSITY RISE DURING FREE RADICAL CROSSLINKING POLYMERIZATION WITH INHIBITION
V. M. Gonzalez-Romero and C. W. Macosko 1985 9 p
(Contract DAAG29-83-K-0149)
(AD-A159842; ARO-20678.7-CH) Avail: NTIS HC A02/MF A01 CSCL 07/3

A study of the viscosity rise during free radical crosslinking polymerization is presented. Techniques were developed for monitoring isothermal viscosity rise during fast polymerization reactions. The chemical system used was composed of a dimethacrylate resin in styrene monomer, t-butyl perbenzoate initiator, and hydroquinone as the inhibitor. When reduced viscosity is plotted versus conversion, data at all temperatures collapsed into a single curve. A theoretical equation is suggested for the time required to reach the gel point in free radical crosslinking polymerization with inhibition. This equation showed good agreement with experimental observations. Author (GRA)

PRODUCTION OF CN (A2pi I) IN THE PHOTOLYSIS OF ACETONITRILE AT 158 NM
J. B. Halpern and X. Tang 30 Sep. 1985 21 p
(Contracts N00014-80-C-0305; DE-AS05-76ER-05056; Grant NSF CHE-82-19255)
(AD-A160175; ONR-TR-18) Avail: NTIS HC A02/MF A01 CSCL 07/5

The primary product of the photolysis of acetonitrile and d sub 3- acetonitrile in the first Rydberg system absorption at 158 nm is shown to be CN (A superscript 2 pi sub i). Near collision free measurements of the quantum state distributions in the A superscript 2 Pi sub i v' = 0 level detect little rotational excitation in the CN fragment. The population of the V' = 1 level of the CN (A superscript 2 pi sub i) state is less than 10% of that in the v' = 0 level. The occupation of the Pi sub 3/2 and pi sub 1/2 manifolds seems to be statistical. GRA

SYNTHESIS OF SYNTHETIC HYDROCARBONS VIA ALPHA OLEFINS Final Report, 17 Aug. 1981 - 31 Dec. 1984
G. L. Driscoll and S. J. G. Linkletter May 1985 96 p
(Contract F33615-81-C-5058)
(AD-A160386; AFWAL-TR-85-4066) Avail: NTIS HC A05/MF A01 CSCL 11/8

Alpha olefins have been used for some timo as a starting point to produce oligomers in the C20 -C40(+) range. As lubricants, these materialsl exhibit unique properties in some respects, while in others, are demonstratively poorer than lubricants derived from mineral oils. Thermal and oxidative stability of commercially available decene oligomer is compared to oligomer prepared by anionic catalylsis. The latter oligomers show somewhat improved stabilities as well as more well-defined isomeric hydrocarbon species. Thermal stressing of oligomers at 350 C in and atmosphere of hydrogen and, alternatively, deuterium, suggest that thermal decompostion is a true bulk property. Normal alkanes were observed as decomposition products, while only small amounts of deuterium were found in the decompostion products, suggesting that radical recombination is a predominate mechanism. NMR analysis of oligomer prepared form 1 decene-2-C-13 with boron trifluoride catalyst suggests that oligomerization involves secondary carboniumn ions resulting from a rapid isomerization of the alpha olefin. Anionic addition (telomerization) of ethylene to mesitylene and meta xylene yields straight chain alkyl, aromatic oils in which the chain length, structure and point of attachment to the aromatic ring can be controlled. These oils exhibited characteristic poor oxidation stability, however, hydrogenation of the aromatic ring in the m-xylene telomer produced a marked improvement in oxidation stability producing an oil equivalent to polydecene. VAPOR PRESSURE OF METHYLPHOSPHONIC DICHLORIDE: A COMPENDIUM Special Publication, May - Aug. 1984
A. Brozena and D. Fielder Sep. 1985 13 p
(DA Proj. 1L1-62706-A-553)
(AD-A160613; CRDC-SP-85012) Avail: NTIS HC A02/MF A01 CSCL 07/3

Vapor-pressure data for methylphosphonic dichloride from many sources are reviewed and analyzed to obtain a best-fit predictive Antoine equation. Also given are the heat of vaporization and volatility at various temperatures. Zeffert published an Antoine equation for dichlor in 1960. However, no experimental data were given in the report. Several British technical reports contained some experimental vapor pressure data for dichlor, and several Edgewood Arsenal contractor reports also contained vapor-pressure data for the compound. The data from these various sources were combined into a set and evaluated, using Penski and Latour's method of computation. Zeffert's equation was used to calculate values for his experimental data and these values were used when all data were combined into a set. GRA

(NASA-CR-177929; NAS 1.26:177929; D6-53020) Avail: NTIS HC A05/MF A01 CSCL 11D

The effects of environmental exposure on composite materials are determined. The environments considered are representative of those experienced by commercial jet aircraft. Initial results have been compiled for the following material systems: T300/5208, T300/5209, and T300/934. Future results will include AS-1/3501-6 and Kevlar 49/F161-188. Specimens are exposed on the exterior and interior of 737 airplanes of three airlines, and to continuous ground-level exposure at four locations. In addition, specimens are exposed in the laboratory to conditions such as: simulated ground-air-ground, weatherometer, and moisture. Residual strength results are presented for specimens exposed for up to five years at five ground-level exposure locations and on airplanes from one airline. Author

CONSTRUCTION OF NON-LINEAR MODEL FOR BINARY METAL-MATRIX COMPOSITES Annual Report, 1 Jul. 1984 - 30 Jun. 1985
H. Murakami and G. A. Hegemier Aug. 1985 104 p
(Contract N00014-84-K-0468)
(AD-A159721) Avail: NTIS HC A06/MF A01 CSCL 11/4

The research is conducted in response to the need for microstructural-based theories which furnish increased simulation capabilities of metal-matrix composite structures in both static and dynamic regimes with a minimum of model parameters to be experimentally determined. The objective of the research is to develop a nonlinear model of binary metal-matrix composites that will provide greater accuracy than existing models in linear and nonlinear regimes for static and dynamic loading. Furthermore, in an effort to accommodate practical structural configurations a plate theory is developed for fiber-reinforced composite plates. The progress made during the first year's effort toward achieving the above objectives includes: (1) the development and validation of a linear mixture model which accounts for effective moduli and harmonic wave dispersion, (2) testing of methodologies for including nonlinear material responses, and (3) a significant improvement of existing laminated composite theories to account for inelastic responses driven by in-plane strains. (AD-A159974; NAEC-92-190) Avail: NTIS HC A06/MF A01 CSCL 17/1

Composites are being used in high-strength, low-weight applications such as the aircraft industry. Difficulties arise in the nondestructive testing and evaluation of these materials because of their fibrous nature. Therefore, a study was connected to evaluate, improve, and optimize ultrasonic techniques for the detection of programmed delaminations and other defects in graphite/epoxy composite laminates. A pulse echo testing mode was used and C-scan results were analyzed. To overcome the limits of traditional C-scan, F-scanning (Feature scanning) was also used. This method examines many characteristic features of the ultrasonic waveform such as amplitude, frequency shifts, etc. Feature scanning has the potential to precisely locate and characterize the defects. Micrographic analyses were made to determine defective and good areas for correlation with the results obtain in the F-scan process. The results of the C-scan, F-scan, and photomicrographs showed an excellent correlation. Specific conclusions are drawn to assist future operators in conducting consistent and reliable C-scans. Situations where F-scanning might be suitable are also reviewed. Author (GRA)

THREE-DIMENSIONAL STRESS SINGULARITIES IN ANISOTROPIC MATERIALS AND COMPOSITES Final Report, 15 Mar. 1983 - 15 Aug. 1984
N. Somaratna and T. C. T. Ting Aug. 1985 65 p
(Contract DAAG46-83-K-0159)
(AD-A160433; AMMRC-TR-85-24) Avail: NTIS HC A04/MF A01 CSCL 12/1

A general numerical procedure is presented for determining the 3-dimensional stresses singularities in anisotropic materials and composites. The geometry near the singular point can be represented by a conical wedge whose lateral surface is generated by straight lines passing through the wedge apex. The shape S sub 1 of the cross section of the conical wedge at any constant radial distance defines the geometry of the 3-dimensional singular point in the material. If S sub 1 consists of two regions each occupied by a different material, we have a 3-dimensional composite conical wedge. A finite element scheme based on variational principles is used to find the order of stress singularities at the wedge apex. The method can be applied to any shape of S sub 1. Several examples are presented. For comparisons with the existing numerical schemes for isotropic materials, the method is applied to special geometry and to isotropic materials. It is shown that the 8 node higher order isoparametric elements employed here is very efficient in obtaining a fairly accurate result. GRA

DEVELOPMENT OF A REDUCED MINDLIN HYBRID STRESS THIN MULTILAYER PLATE ELEMENT WITH APPLICATION TO EDGE CONTACT PROBLEMS Final Report, 15 Aug. 1981 - 15 Jun. 1983
R. L. Spilker and D. M. Jakobs Aug. 1985 152 p
(Contract DAAG46-82-K-0004; DA Proj. 8X3-63304-D-215)
(AD-A160453; AMMRC-TR-85-23) Avail: NTIS HC A08/MF A01 CSCL 04/2

A hybrid-stress formulation of isoparametric elements for the analysis of thin multilayer laminated composite plates is presented, and is applied to edge contact analyses. The element displacement behavior is characterized by laminate reference surface inplane and transverse displacements and laminate non-normal cross-section rotations; as a result, the number of degrees of freedom is independent of the number of layers. All components of stress are included and are related to a set of laminate stress parameters, the number of which is independent of the number of layers. Attention is restricted here to thin laminates: for thin laminates it is shown that the contributions of transverse shear stress and transverse normal stress to the internal complementary strain energy can be neglected. As a result, a modified stiffness-formation-algorithm can be used which provides a significant improvement in computation efficiency. The formulation is used to develop an 8-node isoparametric thin multilayer plate element. The resulting element is naturally invariant, of correct rank, and non-locking in the thin plate limit. Element performance is documented here for several illustrative examples. GRA

DRILLING RISERS FOR GREAT WATER DEPTHS: ADVANTAGE FOR MASS REDUCTION BY MEANS OF COMPOSITE MATERIALS
P. Odru (Institut Francais du Petrole, Gnenoble, France) and J. C. Guichard 1985 12 p refs Presented at Deep Offshore Technology (DOT) Conference, Sorrente, Italy, 21 Oct. 1985
(SNIAS-852-430-101) Avail: NTIS HC A02/MF A01

Composite material lines processed from carbon and glass fiber composites were manufactured in pieces of 15 m length and then fitted to an operational drilling riser, in parallel with the working lines. A reduction of dynamic stress was expected. The

lines were routinely subjected to 10,000 psi. The results prove satisfactory for high pressure lines. However, the greater fragility of composite hardware versus steel is a factor to be considered when handling the riser. Author (ESA)

TEMPORAL STABILITY OF OXIDIZER SOLUTIONS: A SURVEY OF CANDIDATE DECON MATERIALS IN SEAWATER Memorandum Report
R. E. Pellenbarg and D. A. Dotson 30 Sep. 1985 19 p
(NR Proj. F64-561)
(AD-A159734; NRL-MR-5668) Avail: NTIS HC A02/MF A01 CSCL 07/4

Aqueous solutions (0.1 N or less) of various potential decon agents were examined for long term stability in seawater at 6 C, 23 C, and 70 C. The following compounds were tested: the hypochlorite salts of sodium, calcium, and lithium; sodium dichloroisocyanuarate; the peroxygen compounds sodium perborate, sodium peroxydisulfate, hydrogen peroxide, and magnesium monoperoxyphthalate. The inorganic hypochlorite solutions were stable for up to 4 days at 6 and 20 C. The solutions were unstable at 70 C, deteriorating markedly in as little as 12 hours. The isocyanurate solutions were stable at low and ambient temperatures, but decomposed within 3 to 4 hours at 70 C. The perborate and peroxide solutions showed stability at all temperatures for up to 24 hours. The peroxydisulfate solutions decomposed rapidly at 70 C, and the magnesium monoperoxyphtalate solutions were unstable at all temperatures, decomposing within 0.5 hours. These solution stability data, monitored by iodometric titrimetry, provide information on the long term stability of potential decontamination fluids formulated with seawater. These data are of importance, should one or more of the examined candidates prove efficacious for decontamination applications. GRA

TEMPORAL STABILITY OF SOLID OXIDIZERS AT HIGH TEMPERATURE AND HUMIDITY Memorandum Report
R. E. Pellenbarg and D. A. Dotson 30 Sep. 1985 11 p
(NR Proj. F64-561)
(AD-A159735; NRL-MR-5672) Avail: NTIS HC A02/MF A01 CSCL 11/6

Chemical Warfare/Biological Warfare (CW/BW) decontamination operations may rely on aqueous solutions prepared from stored solid oxidizers. Needed are data defining the shipboard storage stability of candidate oxidizers. Therefore, the stability of a series of potential decontaminants has been examined at high temperature (90 + C) and humidity (95 + % R.H.). The loss of oxidizing capacity in aliquots of the oxidizers was followed with time by iodometric titration. Calcium hypochlorite lost over 99% of its oxidizing capacity in less than two days, whereas lithium hypochlorite retained one-third oxidizing capacity for approximately twenty days. Sodium perborate, and sodium persulfate were very hygroscopic and unstable with time. H-48 decomposed in approximately two days, while sodium isocyanurate lost about 80% of its oxidizing capacity in two weeks. The data presented documents severe stability problems of one sort or another with all the materials tested, although overall the sodium isocyanurate appeared to be the more stable candidate under extreme conditions. In any case, packaging and storage considerations are shown to be important for any potential decontaminant to be stored under environmentally severe conditions. GRA

COMPLEX MOLECULAR MOTIONS IN BULK HARD SEGMENT POLYURETHANES: A DEUTERIUM NMR STUDY Technical Report
A. Kintanar, L. W. Jelinski, I. Gancarz, and J. T. Koberstein 30 Sep. 1985 42 p Prepared in cooperation with Bell Telephone Labs.,

Inc., Murray Hill, N.J.
(Contract N00014-84-K-0534)
(AD-A159760; TR-2) Avail: NTIS HC A03/MF A01 CSCL 07/4

Solid state deuterium NMR spectroscopy is used to characterize molecular motion in two specifically deuterated polyurethane hard segment polymers. The polyurethanes consist of 4,4'-diphenylmethane diisocyanate (MDI) chain extended with (2,2,3,3-d subscript 4) butanediol (BDO), and 2,4 toluene diisocyanate (TDI) chain extended with (2,2,3,3-d subscript 4) butanediol. Lineshape and relaxation T subscript 1 data were obtained as a function of temperature. The results indicate a broad distribution of motional correlation times, in both materials. In the semicrystalline MDI-BDO polymer, the distribution divides cleanly into two components that are attributable to the crystalline and amorphous regions of the material. In the TDI-BDO polymer, there is only a single broad distribution in keeping with the completely amorphous nature of this material. The results also show that the predominant large-scale motion of the alkyl chain is a gauche-trans conformational hop. The central methylene carbons of the butanediol undergo librations about their equilibrium positions, in addition to the large scale conformational transitions. Above approx. 60 C, additional larger-scale diffusion of the entire butanediol moiety occurs within a cone of semiangle approx. 15. The results are consistent with the existence of kinked conformations in the alkyl chain of this material. Author (GRA)

AUTOMATED ION CHROMATOGRAPHY Technical Report, for Period Ending 1983
S. H. Hoke and L. J. Baxter Jun. 1985 14 p
(DA Proj. 3A1-61101-A-91-C)
(AD-A159764; USAMBRDL-TR-8501) Avail: NTIS HC A02/MF A01 CSCL 07/4

An ion chromatograph and an automatic sampler have been interfaced with a data station and a minicomputer. This arrangement allows for ease of operation and automatic integration of chromatographic peaks, calculations, and storage and retrieval of data. It also permits the use of special analytical techniques which could not easily be performed manually. Three applications of this configuration are discussed: anionic stripping of interfering ions, simplified determination of phenoxy acid herbicides, and computer-aided comparisons of simultaneously-processed chromatogram calibrations. EFFECTS OF CURVATURE AND DILUTION ON UNSTEADY, PREMIXED, LAMINAR FLAME PROPAGATION
K. Kailasanath and E. S. Oran 30 Sep. 1985 22 p
(AD-A159934; NRL-MR-5659) Avail: NTIS HC A02/MF A01 CSCL 21/2

We have used a time-dependent, one-dimensional, Lagrangian model to study laminar flames in stoichiometric hydrogen-oxygen mixtures diluted with nitrogen. For stoichiometric hydrogen-air mixtures we have seen that spherically expanding flame first decelerates until the velocity reaches a minimum value, and then it accelerates. For large radii, the burning velocity approaches the planar burning velocity. These same trends are also observed as the amount of diluent is increased. With increasing dilution, the flames reach their minimum velocities at larger times and larger radii. These observations are explained on the basis of flame stretch. The spherical geometry results are compared to be results from another set of calculations in planar flame in the same mixture. In both planar and spherical geometries, the effect of increasing the dilution is to lower the burning velocities. Since the burning velocity is smaller in the spherical geometry, the flame is less than that of a planar flame in the same mixture. In both planar and spherical geometries, the effect of increasing the dilution is to lower the burning velocities. Since the burning velocity is smaller in the spherical geometry, the flame can be extinguished (or quenched) with less dilution in the spherical geometry than in the planar geometry. We also discuss the implications of these results to laminar flame quenching and flammability limits. Author (GRA)

COMPARISON BETWEEN SURFACE-ENHANCED RAMAN AND SURFACE INFRARED SPECTROSCOPIES FOR STRONGLY PERTURBED ADSORBATES: THIOCYANATE AT GOLD ELECTRODES
D. S. Corrigan, J. K. Foley, P. Gao, S. Pons, and M. J. Weaver Aug. 1985 20 p Prepared in cooperation with Utah Univ., Salt Lake City
(Contract N00014-79-C-0670)
(AD-A159954; TR-46) Avail: NTIS HC A02/MF A01 CSCL 07/4

The potential-dependent C-N stretching mode, v sub CN, for thiocyanate adsorbed at the gold-aqueous interface is examined by both surface-enhanced Raman spectroscopy (SERS) and subtractively normalized interfacial Fourier transform infrared spectroscopy (SNIFTIRS). Both SERS and SNIFTIRS exhibit a v sub CN frequencies were very similar (within ca. 5/cm) for the SNIFTIRS at smooth and electrochemically roughened gold, as well as for SNIFTIRS and SERS on the latter surface. This suggests that the SERS-active sites do not differ substantially from the preponderant sites sensed by SNIFTIRS. Some features of the SER spectra suggest that N- as well as S-bound adsorbed thiocyanate exists at far negative potentials. Author (GRA)

SURFACE-ENHANCED RAMAN SPECTROSCOPY AS A PROBE OR ADSORBATE-SURFACE BONDING: BENZENE AND MONOSUBSTITUTED BENZENES ADSORBED AT GOLD ELECTRODES
P. Gao and M. J. Weaver Aug. 1985 31 p
(Contract N00014-79-C-0670)
(AD-A159978; TR-51) Avail: NTIS HC A03/MF A01 CSCL 07/4

Surface-enhanced Raman spectra of benzene and eight monosubstituted benzenes adsorbed at gold electrodes have been examined in order to probe the nature of adsorbate-surface bonding for simple aromatic molecules. Benzene appears to adsorb flat via pi adsorbate-surface interactions as evidenced by the significant (20 to 30/cm) downshifts in the symmetric rig breathing mode (v sub 1) and the absence of other ring modes in the SER spectra. Similar results were obtained using gold surfaces prepared by electroplating or anodic-cathodic potential sweeps in chloride, although much more stable SERS was obtained by using the latter procedure. The ring substituents -CHD3, -CH(CH3)2, -C(CH3)3, -Cl, -Br, -CN, -NO2, -COO(-) and -CHO were chosen so to provide steric perturbations or alternative binding modes to the metal surface. With the alkyl, benzoate, and aldehyde substituents, small yet significant (ca. 5 to 15/cm) decreases in the v sub 12 and v sub 18a characteristic ring modes along with band broadening were observed upon adsorption, consistent with attachment via the benzene ring. For the halogen substituents, smaller such downshifts were obtained along with the appearance of low-frequency modes associated with halogen-surface vibrations, implicating the role of substituent bonding in the adsorption. For the nitrile and nitro substituents, the ring modes were unaltered in frequency or bandshape upon adsorption while intense internal substituent modes were observed. GRA

INTERACTION EFFECTS IN PREMIXED TURBULENT COMBUSTION Final Report, 1 Mar. 1982 - 30 Sep. 1985
P. A. Libby 24 Sep. 1985 4 p
(Contract N00014-79-C-0355)
(AD-A160077) Avail: NTIS HC A02/MF A01 CSCL 21/2

The research has been concerned with two topics in premixed turbulent combustion. One relates to a continuation of the research on the discovery of new mechanisms for turbulent transport and turbulence generation arising from the interaction of

mean force fields due to gradients of either pressure or shear stresses and density variations. These earlier studies consider infinite planar flames and since the mechanisms in question are confined to the flames themselves, the question arises as to their applied significance and importance in determining global features of turbulent flows consisting of two regions of uniform density on each side of a flame. To examine this question we have extended the analysis to provide a unified theory for the description of all three regions. The second topics relates to the consideration of the length and time scales of the temperature field in a premixed turbulent flame. The time history of the temperature at a point within such a flame involves alternately high and low values corresponding respectively to the passage of products and reactants. By appropriate normalization such a history can be made into a telegraph signal whose statistical characteristics provide information on the time scales of the temperature field. We have shown that an analysis of these characteristics leads to a model for an important quantity in the phenomenology of premixed turbulent combustion, namely the mean rate of chemical reaction. SURFACE ENHANCEMENT FACTORS FOR RAMAN SCATTERING AT SILVER ELECTRODES. ROLE OF ADSORBATE-SURFACE INTERACTIONS AND ELECTRONIC STRUCTURE
M. J. Weaver, S. Farquharson, and M. A. Tadayyoni Aug. 1985 31 p
(Contract N00014-79-C-0670)
(AD-A160120; TR-44) Avail: NTIS HC A03/MF A01 CSCL 07/4

The integrated Raman band intensities for internal vibrational modes of various adsorbates at roughened silver electrodes are combined with surface concentrations obtained electrochemically to yield surface Raman scattering cross sections. These data together with the corresponding bulk-phase Raman intensities provide estimates of the degree of enhancement of the vibrational bands at the silver surface with respect to the bulk medium, i.e., the surface enhancement factors (SEF). For surface-attached thiocyanate, isothiocyanate-bridged Cr(III) complexes, and also for Cr(III) and Co(III) hexammines that are electrostatically attracted to chloride-coated silver, SEF values are obtained that are relatively insensitive to both the vibrational mode and the adsorbate, even though substantial (up to 500 fold) variations are observed in the Raman cross sections. This finding applies to stretching modes involving nonbridging ammine groups as well as to bridging thiocyanate modes, although the frequencies of the latter, but not of the former, are perturbed strongly by the silver surface. Comparisons were also made between Raman cross sections, surface enhancement factors, and excitation profiles for pyrazine-pentaammineosmium(III) and (II) to explore the influence of electronic resonance since the Os(II) form displays an intense charge-transfer band in the vicinity of the laser wavelengths (460-650 nm) employed. A pronounced peak in the Os(II) excitation profile, absent for Os(III), is obtained that is markedly (ca. 100 nm) red shifted for the adsorbed versus bulk complex. GRA

MOLECULAR TRANSMISSION BAND MODELS FOR THE UNIFORMLY MIXED AND THE TRACE GASES
J. H. Pierluissi and C. E. Maragoudakis 31 Dec. 1984 144 p
(Contract F19628-82-C-0078)
(AD-A160442; AFGL-TR-84-0320; SR-1) Avail: NTIS HC A07/MF A01 CSCL 04/1

This report deals with the theory, development and validation of molecular transmission band models for the uniformly mixed nitric oxide methane, carbon monoxide, oxygen, and carbon dioxide, and for the trace nitrogen oxide, nitrogen dioxide, ammonia, and sulfur dioxide gases. The models were specifically designed for direct incorporation into the LOWTRAN atmospheric transmission code. The transmission function adopted for each gas, acting individually consists of a double exponential function defined by three gas dependent parameters and a single spectrally-dependent parameter. All of these parameters were determined optimally through a numerical procedure that generally incorporates line-by-line and measured transmittance spectra. The resulting nine models were defined at 5/cm intervals throughout their absorber bands, for transmittance calculations of 20/cm spectral resolution at typical atmospheric conditions. Averaged vertical mixing ration profiles for these gases were obtained for direct use with the 33-level standard atmospheric models in the calculation of slantpath transmittance. Comparisons are presented between line-by-line and measured transmittance spectra, and between these spectra, and model calculations using LOWTRAN 6. GRA

CONDUCTIVITY, DSC, FTIR, AND NMR STUDIES OF POLY (VINYL ACETATE) COMPLEXED WITH ALKALI METAL SALTS
J. J. Fontanella and M. C. Wintersgill 1 Sep. 1985 15 p
(Contract N00014-85-AF-00001)
(AD-A160450) Avail: NTIS HC A02/MF A01 CSCL 07/3

Electrical conductivity, differential scanning calorimetry, and nuclear magnetic resonance studies have been carried out on poly(vinyl acetate) after the addition of various lithium salts. In the case of lithium triflate, the resultant polymer is poly(vinyl alcohol). Relatively large conductivities are observed after initial preparation, but these decrease with time when the material is in vacuum. The conductivities exhibit approximately Arrhenius behavior and increases with salt concentration. In addition to the conductivity, NMR, FTIR, and DSC results are presented. All results are interpreted in terms of the model of Wissbrun and Hannon where water is the solvating species. Author (GRA)

Recent work on the transient absorption spectra induced by the dynamic shock-loading of carbon disulfide has shown a shock-induced shift of the UV absorption edge up to a pressure of 8.0 to 9.0 GPa followed by irreversible chemistry in which the CS2 becomes opaque. This document describes the spectroscopic link between shock-induced and the static high pressure experiments for CS2. We have used diamond-anvil cells and a combination of Raman, infrared, and UV-vis-NIR absorption spectroscopies to analyze the behavior of CS2 in the pressure range 0.2 to 10.0 GPa and have compared one of these spectroscopic observables, the UV-absorption edge shift prior to the onset of irreversible chemistry, with that measured in the shock experiment. The absorption-edge shift as a function of high pressure is reported for carbon disulfide for the range 1.8 to 8.3 GPa. The absorption edge shift compares favorably with the isothermal ramp-wave results of other workers. The absorption edge shift with a temperature of the step-shock experiments of 220 C versus 350 C was predicted on the basis of previous EOS calculations. The libron modes show strong dependence on crystal orientation at high pressure and an irreversible polymerization is noted at 8.3 GPa. The CS2 product shows some of the infrared characteristics of Bridgeman's Black, which has been formed at 185 C and 5.5 GPa. The rather small pressure-induced shift of V sub 1 and V sub 3 is explained on the basis of compensating effects involving intermolecular repulsive versus electronic overlap between adjacent CS2's. CHEMICAL APPLICATIONS OF TOPOLOGY AND GROUP THEORY. TWENTY 8-VERTEX POLYHEDRA AND THEIR REARRANGEMENTS
R. B. King 14 Oct. 1985 24 p
(Contract N00014-84-K-0365)
(AD-A160589; TR-5) Avail: NTIS HC A02/MF A01 CSCL 07/4

There are 257 combinatorially distinct eight-vertex polyhedra, of which 14 are deltahedra. Of the 14 deltahedra only the

bisdisphenoid, commonly known as the D2d or triangular dodecahedron, both lacks tetrahedral chambers and can be formed by the hybridization of only s,p, and d orbitals. Degenerate single and symmetrical parallel multiple diamond-square-diamond processes involving the 14 eight-vertex deltahedra are tabulated. Among the eleven such processes (six single, two symmetrical double, one fully symmetrical triple, and two fully symmetrical quadruple) those relating the bisdisphenoid to the 4,4-bicapped trigonal prim and square antiprism are of current chemical significance. Single, double, and quadrupole dsd rearrangements of the bidisphenoid are depicted as topologically equivalent cubes with added diagonals so that the pivot faces are faces of the underlying cube and the dsd processes involve shifting only the positions of selected diagonals without disturbing the 12 edges of the underlying cube. THERMAL AND MECHANICAL PROPERTIES OF CALCIUM LANTHANUM SULFIDE Final Report
J. R. Koenig Apr. 1985 71 p
(Contract N00014-83-K-0195)
(AD-A160611; SORI-EAS-85-401-5267-I-F) Avail: NTIS HC A04/MF A01 CSCL 20/6

The purpose of this effort was the determination of the mechanical and thermal properties of specimens fabricated from calcium lanthanium sulfide (CaLa2S4) by Raytheon Company, Research Division. The test matrix used was designed to obtain sufficient information for comparative design studies and screening of the material with emphasis on those properties which are anticipated to be most critical for a thermostructural environment. The thermal stress resistance was investigated using thermal expansion, thermal conductivity, specific heat and flexure. Sensitivity studies conducted on this class of materials show the critical properties which control the thermal stress response for the general heating rates and geometries of interest here to be the thermal expansion, tensile strength or strain to failure and the ratio of the high temperature compressive modulus to low temperature tensile modulus. The other properties measured have a second order effect on the thermal stress response, but are important for other critical responses. GRA

MNDO CALCULATIONS OF IONS IN CHLOROALUMINATE MOLTEN SALTS Interim Report, Jan. - Dec. 1984
L. P. Davis, C. J. Dymek, Jr., J. J. P. Stewart, H. P. Clark, and W. J. Lauderdale 4 Sep. 1985 7 p
(AD-A160620; FJSRL-JR-85-0009) Avail: NTIS HC A02/MF A01 CSCL 07/4

We have performed MNDO calculations on the anions in molten chloroaluminate salts. Calculated geometries for AlCl4- and Al2Cl7- agree in most respects with available data. The vibrational spectrum of Al2Cl7- calculated by MNDO is consistent with the observed IR spectrum and leads to assignment of C2 symmetry for this ion. The 27Al NMR exchange reaction between the two anions was also studied. The calculated energy of activation in the most realistic model used was 13 kcal/mol compared to the experimental value of 10 kcal/mol. GRA

BINARY LIQUID GELS
J. V. Maher 1985 14 p refs Presented at the Workshop on the Physics of Finely-Divided Matter, Les Houches, France, 1 Mar. 1985
(Contract DE-FG02-84ER-45131)
(DE85-014953; CONF-8503178-2) Avail: NTIS HC A02/MF A01

A recent paper reported the fabrication of several binary liquid gels, swollen gels whose solvent is a binary liquid mixture near its critical temperature. One might expect novel features for such gels since the presence of polymer strands spaced on average at something like the gel pore size should inhibit hydrodynamic degrees of freedom in the liquid's phase separation and the polymer strands in turn should have a preference for one of the separated liquid phases. The minimum effect one might expect is a slowing down of the gravitationally induced late stages of spinodal decomposition by the mechanical presence of the polymer network. Much more dramatic effects would be expected if the polymer plays a more active role and forms a ternary thermodynamic system with the solvents. Our observation is that the polymer strands interact with the liquid mixture strongly enough to frustrate the phase separation and dramatically alter the light scattering properties of the system in the critical region; however, the interaction is sufficiently weak that light scattering does not resemble that expected of a ternary system. PICOGRAM FT-IR: ULTRAMICROSAMPLING AND GC-IR
T. Hirschfeld Jul. 1985 6 p Presented at the International Conference on Fourier and Computerized Infrared Spectroscopy, Ottawa, Canada, 24 Jun. 1985
(Contract W-7405-eng-48)
(DE85-016440; UCRL-92445; CONF-8506118-3) Avail: NTIS HC A02/MF A01

The commonality between ultramicrosampling and GC-IR is far deeper than the desire for picogram detection levels in both cases. Both techniques also need small area light spots: in ultramicrosampling, for spatial resolution; and in GC-IR, to match limited sample volumes. Fast response is needed for real-time measurements on the fly GC-IR, and for mapping analysis of extended samples in a finite line in ultramicrosampling. And finally, the fly fast processing is required for real-time recognition of significant success in GC-IR (presence of peaks) and in ultramicrosampling (presence of local anomalies in sample). A small FT-IR interferometer benefiting from the counter-Jacquinot advantage, immersion optics for microsampling and optimized sample cells for GC-IR, high efficiency sources and detectors and the systematic application of information theory to data processing algorithms can be used to bring both these techniques into the middle picogram domain. (DE86-001547; DOE/ER-13133/2) Avail: NTIS HC A02/MF A01

The principal objective of this program is to learn how to utilize the unique porperties of Rhodium porphyrins in achieving catalytic hydrogenation of carbon monoxide at mild conditions. Rhodium porphyrins react with H2 and CO at pressures less than one atmosphere to produce the first intermediate in the hydrogenation of CO and provide a realistic opportunity to participate in the catalytic hydrogenation of CO at low gas pressures. Several catalytic schemes are porposed which take advantage of the unique reactivity of Rhodium porphyrins coupled with the aldehyde-like character of the metallo formyl intermediate. Multifunctional catalysts that utilize Rhodium porphyrins and a second catalyst known to promote the hydrogenation of aldehydes are particularly promising candidates for achieving low pressure hydrogenation of CO. Solvent effects will be explored as one means for tuning the thermodynamic and kinetic parameters for optimum catalytic behavior. Comparative studies used in identifying the essential features required to obtain a catalyst system based on metallo macrocycles. DOE

ANALYSIS FOR IMPURITIES IN HELIUM USING THE HELIUM IONIZATION DETECTOR, REPORT OF INVESTIGATIONS 1985
C. A. Seitz 1985 37 p
(PB85-245157; BM-RI-8941; LC-84-600325) Avail: NTIS HC A03/MF A01 CSCL 14B

The Bureau of Mines report describes a chromatographic method for analyzing impurities in helium that utilizes a helium carrier gas containing 25 to 30 ppm Ne. An example of the effect of trace amounts of nitrogen, methane, and moisture on the detector's response is shown. The added neon in the carrier does away with irregularities of the analysis that were experienced when the carrier contained up to 3 ppm Ne. The addition of 25 to 30 ppm Ne causes a loss of sensitivity, but the remaining sensitivity is adequate for routine analyses. The high-neon carrier allows positive and more linear responses for eight impurities: neon, hydrogen, argon, oxygen, nitrogen, methane, carbon dioxide, and ethane. Neon concentration levels of 0.02 to 125 ppm in helium carrier gases were studied. Author (GRA)

Experimental results from metal-metal adhesion were analyzed. The adhesion coefficients of aluminum, lead and zinc obtained from heating experiments in air increase with decreasing load; excepting some of the data for lead, the relation can be expressed by a simple formula. The relationship between degree of intrusion of the contact surface and load was deduced on the assumption that projections obeying a normal distribution make plastic contact. The relation obtained showed that intrusion is greater the smaller the load, implying that, when the load is small, there is greater apparent deformation of the projections per unit load. The relation between adhesion coefficient and temperature for aluminum and lead in heating experiments conducted in air may be expressed in simple form. A relation of this kind should also exist for other metals, in which case the activation energy for adhesion will be useful in assessing the adhesiveness of materials. Author

TASKS OF ACCELERATING SCIENTIFIC AND TECHNICAL PROGRESS IN METAL SCIENCE OF HIGH-GRADE STEELS
S. A. Golovanenko 1985 22 p Transl. into ENGLISH from Stal, no. 4, 1985 p 73-78 Presented at the All-Union Conference for Heads of Specialized Councils of VAK SSSR and Representatives of Industry, USSR
(BLL-M-36465-(5828.4)) Avail: Issuing Activity

A general review of tasks and possible methods of scientific and technical progress in the field of metal science of high grade steels are analyzed. Carbon and low-alloy steels of high volume use, structural steels for engineering, corrosion resistant steels, high temperature, thermally stable, and heat resistant steels and alloys, and tool steels are discussed. The need for improvement in the grade range of steels and in the process of developing and assimilating new grades of steel is indicated. Author

TESTING OF STEEL 03Kh11N10M2T1-VD FOR SPRINGS OF INERTIA SAFETY BELTS
V. B. Lenyashin, V. P. Pavlov, and I. Ya. Sokol 1985 5 p refs Transl. into ENGLISH from Stal (USSR), no. 4, 1985 p 72-73
(BLL-M-36464-(5828.4)) Avail: Issuing Activity

Narrow strip of cobalt free maraging steel 03Kh11N10M2T1-VD was tested to establish the possibility of using this material for manufacture of the springs of safety belts. Comparative examination indicates that this steel ensures a higher spring life than the currently used high alloy austenitic-martensitic steel 12KhN-MKTYu. Author

CERTAIN FEATURES OF FINE STRUCTURE IN Fe-Ni ALLOYS
I. V. Sidash and A. G. Savchenko [1985] 4 p refs Transl. into ENGLISH from Izvestiya Vysshikh Uchebnykh Zavedenii Chernaya Metallurgiya (USSR), no. 3, 1985 p 152
Avail: British Library Lending Div., Boston Spa, Engl.

Nuclear gamma resonance spectroscopy was used to investigate an Fe-Ni alloy of equiatomic composition in the deformed state, after high temperature annealing, and after different low temperature annealing schedules. It was concluded that the alloy is inhomogeneous in composition. There are high iron regions similar in composition to the stoichiometry on Ni3Fe with the degree of order in them depending on the treatment schedule. Regions with an Ni-Fe type short range order were revealed. E.R.

STRUCTURAL CHANGES IN FERRITE-AUSTENITE STEEL

O3Kh26N6 DURING HOT TORSION
S. V. Lobatkin, M. Ya. Pakhomova, and I. D. Arinushkin [1985] 4 p Transl. into ENGLISH from Izvestiya Vysshikh Uchebnykh Zavedenii Chernaya Metallurgiya (USSR), no. 3, 1985 p 153-154 (BLL-M-36451-(5828.4F)) Avail: British Library Lending Div., Boston Spa, Engl.

The correspondence of ferrite to austenite components in the steel was studied with regard to torsion deformation and the preservation of superplasticity. The structure of the steel was investigated with torsion deformation on a seteram torsion machine with a special arrangement for rapid cooling of the samples. The correspondence of phases in the composition of the steel does not depend on the course of heating and was defined by the final temperature. Metallographic and electron microscope studies of the structure of steel after hot torsion allowed the establishment of the fact that at temperature intervals of 850 to 1200 C steel ferrite softens by the mechanism of dynamic recrystallization, while austenite softens by the mechanism of dynamic polygonization. E.R.

TREATMENT OF METAL POWDERS IN ATTRITION MACHINES
V. N. Plechev, Zh. I. Dzneladze, V. F. Lykova, R. P. Shchegoleva, and I. P. Zakharova [1985] 9 p refs Transl. into ENGLISH from Stal (USSR), no. 3, 1985 p 78-82
(BLL-M-36420-(5282.4F)) Avail: British Library Lending Div., Boston Spa, Engl.

An attrition machine was used to grind metal powders poduced by the calcium hybride method and to change their macro- and micromorphology in order to make them suitable for use as components of the fillers of paint and varnish coatings and enamels. Tests were conducted on powders of chromium, Ni-Cr alloy PKh20N80, and ferroaluminum high resistance alloys PKh25Yu6 and PKh25Yu10. The influence was studied of treatment in argon and in ethyl alcohol in an attrition machine on the chemical composition and particle size distribution of powders, their specific surface, and their bulk density, and also on the magnitudes of the coherent scattering units, microdistortions, and dislocation density. It was established that treatment in ethyl alcohol in an attrition machine is an effective method of grinding powders and changing the shape of particles. Author

EVALUATION OF THE FATIGUE STRENGTH OF AUSTENITIC STEELS AT TEMPERATURES OF 293 AND 77 K
G. A. Styepanov 2 Dec. 1985 8 p Transl. into ENGLISH from the book "K Otsenke Ustalostnoi Prochnosti Austenitnykh Stalei pri Temperaturakh 293 i 77 K" USSR, Nauka
(BLL-Risley-Tr-5231-(9091.9F)) Avail: British Library Lending Division, Boston Spa, Engl.

The effects of temperature on the fatigue strength of austenitic steels is evaluated. Of special concern is the strength of welded seams. By complex alloying with manganese and nitrogen and a simultaneous reduction in nickel content, it is possible to increase not only the static but also the cyclic strength of austenitic steels at room and cryogenic temperatures. The presence of welding in the event of subsequent heat treatment of welded parts being impossible, destroys the effect achieved. E.R.

EXAMPLES OF THE APPLICATION OF TITANIUM NITRIDE COATINGS ON 6-5-2 STEEL TOOLS FOR CUTTING STEELS WITH CONTROLLED INCLUSIONS
D. Robat and J. Bellot 7 Nov. 1985 13 p Transl. into ENGLISH from Traitement Thermique (Paris, France), no. 184, Jun. - Jul. 1984 p 33-37
(BLL-Risley-Tr-5221-(9091.9F)) Avail: British Library Lending Division, Boston Spa, Engl.

Observations made confirm the significance of the nature of the tool-metal link in the general problem of metal cutting. The results obtained with the coated high speed steel tool, summarized in the table form, show that it was possible, at low cutting speeds, to find the phenomena of anti-wear deposition already observed on carbide tools at higher cutting speeds. The nature of these deposits and their stability field also confirmed the value of simultaneous control of inclusions of sulphides and oxides in steels to achieve high machinability in a very wide range of cutting speeds. CONTRIBUTION TO THE STUDY OF TITANIUM NITRIDE AND CARBIDE COATINGS OBTAINED BY PHYSICAL VAPOUR DEPOSITION (PVD) ON 6-5-2 STEEL TOOLS
P. Jacquot, J. M. Poirson, H. Michel, M. Gantois, and J. P. Peyre 7 Nov. 1985 15 p refs Transl. into ENGLISH from Traitement Thermique (Nancy, France) no. 184, Jun. - Jul. 1984 p 25-30
(BLL-Risley-Tr-5220-(9091.9F)) Avail: British Library Lending Division, Boston Spa, Engl.

Among the many compounds suitable for coating tools, deposition has so far mainly been of TiN and possibly TiC. Titanium nitride and carbide obtained in the form of very thin coatings are more and more frequently being used for the wear resisting properties they confer on high speed steel tools. Their thickness does not generally exceed 5 microns, so that their physico-chemical and mechanical characterization is difficult, and demands the use of numerous additional physical analysis techniques. The process which is being developed is presented and its use on a pilot scale for depositing pure metals, alloys or interstitial compounds is described. Its use for producing deposits of TiN and TiC on steel, and some physical, chemical and mechanical characteristics of the products obtained is given. Author

METHOD FOR MAKING ALLOY ADDITIONS TO BASE METALS HAVING HIGHER MELTING POINTS Patent
H. B. Bomberger and F. H. Froes, inventors (to Air Force) Issued 13 Aug. 1985 3 p Supersedes AD-D011403
(AD-D011928; US-Patent-4,534,938; US-Patent-Appl-SN-640916; US-Patent-Class-420-590) Avail: US Patent and Trademark Office CSCL 11/6

This document describes a method for adding alloying elements having relatively low boiling points to base metal shaving relatively high melting points. The base metal is combined with the melting point-lowering metal; or metalloid and to this mixture is added the desired alloying metal or metals. No special equipment is required for this method. The first metals included within the scope of this invention are selected from the group consisting of Ba, Ca, Li, Mg and An. Each of these metals has a relatively low boiling point and, with the exception of Zn, a relatively low density. The more refractory base metals included within the scope of this invention are selected from the group consisting of IB, IVB, VB, VIB and VIII of the Periodic Table of the Elements. Of particular interest are Cu from IB, Ti and Zr from IVB, Nba and Ta from VB, Cr and W from VIB and Fe, Co and Ni from VIII. GRA

OPTICAL PROPERTIES OF THE METALS Al, Co, Cu, Au, Fe, Pb, Ni, Pd, Pt, Ag, Ti AND W IN THE INFRARED AND FAR INFRARED Contractor Report, May 1982 - May 1984
M. A. Ordal, L. L. Long, R. J. Bell, S. E. Bell, and R. R. Bell Sep. 1985 55 p
(Contract DAAK11-82-C-0052; DA Proj. 121-62622-A-552)
(AD-A159736; CRDC-CR-84011) Avail: NTIS HC A04/MF A01 CSCL 15/2

Infrared optical constants collected from the literature are tabulated. Many measurements of the optical constants of metals have been made, primarily at near infrared, visible and ultraviolet wavelengths. Sievers and his coworkers have measured Au and Pb in the far infrared. We have compiled this data and have tabulated the real and imaginary parts of the dielectric function, epsilon sub 1 and epsilon sub 2, respectively, the index of refraction, n, and the extinction index, k, for each metal in the infrared. Drude model parameters giving a reasonable fit to the data are given for Au, Ag, Cu, Al, Pb, and W. In general, the Drude model is not expected to be appropriate for transition metals in the near and middle infrared, but a good fit to the measurements can be obtained for W with a Drude model dielectric function. A table of epsilon sub 1, epsilon 2, n and k is given for each metal, calculated from the Drude model using parameters obtained from fitting the measured values. GRA

THE DENSIFICATION OF MOLYBDENUM AND MOLYBDENUM ALLOY POWDERS USING HOT ISOSTATIC PRESSING Final Technical Report
J. Barranco, I. Ahmad, S. Isserow, and R. Warenchak Aug. 1985 66 p Presented at the TMS-AIME Meeting, Detroit, Mich., 16-20 Sep. 1984
(AD-A159886; AD-E440299; ARLCB-TR-85025) Avail: NTIS HC A04/MF A01 CSCL 11/6

This study was conducted to determine a superior erosion resistant gun barrel liner material with improved properties at higher temperatures. Four categories of powders were examined: (1) TZM spherical containing 0.5 titanium, 0.08 zirconium, and 0.02 carbon (wt. % nominally), balance molybdenum (Mo), produced by REP (Rotating Electrode Process), PREP (Plasma Rotating Electrode Process), and PMRS (Plasma Melted and Rapidly Solidified); (2) Mo reduced 2 and 5 microns; (3) Mo-0.1% cobalt, co-reduced; (4) Mo-5 wt. % alumina (Al_2O_3), dispersion strengthened. Hot Isostatic Pressing (HIP) densification occurred at 15-30 Ksi, 1300-1600 C, for 1.5 to 3.0 hours. The TZM REP/PREP powders (220/74 microns) were not fully densified even at 1600 C, 30 Ksi, 3 hours. Point particle contact prevented complete void elimination. TZM PMRS powder (24.7 microns) achieved 99 percent of theoretical density while maintaining a small grain size (10.4 ASTM eq.) Bend deflection and fracture energies were approximately three times those for PREP powder at a bend rupture strength of about 1 Ksi. Mo reduced and Mo-0.1% Co powders showed less (or the same) ductility with increasing HIP temperatures. Fractures were intergranular with decreased bend rupture and compression strength. The Mo-5Al_2O_3 powder maintained a fine grain size (13 ASTM eq.), but with fracture energies usually less than 0.6 in.-lbs. Included are results from bending and compression testing with metallographic and fracture mode interpretation. GRA

INVESTIGATION OF RAPIDLY QUENCHED RARE EARTH IRON ALLOYS FOR PERMANENT MAGNETS Final Technical Report
G. C. Hadjipanayis Jun. 1985 5 p
(Contract N00014-83-K-0290)
(AD-A159946) Avail: NTIS HC A02/MF A01 CSCL 11/6

In early 1985 the potential of FeNd (Pr) B (Si) alloys for permanent magnet development was demonstrated. The progress under consideration was initiated in April 1983, to study the properties of these materials in more details and in particular to understand the origin of magnetic hardening by correlating the magnetic properties with the microstructure determined by transmission electron microscopy. The magnetic properties of melt-spun Fe-R-B alloys have been examined in the whole rare-earth series. The tetragonal $Fe_{14}R_2B$ phase occurs in all alloys studied except in Eu and Yb containing alloys. The Curie temperature of this phase increases from about 170C in $Fe_{14}CeB$ to 375 for $Fe_{14}Gd_2B$ and then decreases for the heavier rare-earths and is only 320 C in $Fe_{14}Ho_2B$. In heavy rare-earths, a second phase with a higher Curie temperature approx. (470 C) has also been observed. The nature of this phase is not yet known. The magnetic hysteresis properties of melt-spun Fe-light rare-earth-boron alloys were examined and maximum coercivities were found to scale with the anisotropy fields. GRA

OPTICAL SURFACE ROUGHNESS AND SELECTIVE ETCHING OF INTERDENDRITIC REXILLIUM III PHASES(S)
J. R. Kelly and V. P. Thompson Aug. 1985 29 p
(DA Proj. M00-95)
(AD-A159949; NDRI-PR-85-08) Avail: NTIS HC A03/MF A01 CSCL 11/6

Reflection of light from electrolytically etched casting alloys is empirically related to the incident light angle, viewing and solid cone angles, absorption and the root mean square surface and solid cone angles, absorption and the root mean square surface roughness. These factors were evaluated for the further development of a fiber optic photometer to quantitate base metal etching. Dental laboratory etching variables studied include: current density, sulfuric acid and methanol concentrations, temperature, etch time and aging of the etch solution. Resin tensile bond strengths and reflection values were correlated by regression analysis. Peak light intensity occurs above the angle of incidence. Increasing the viewing solid cone angle enhanced reflection sensitivity. Reflection measurements showed current density, acid concentration, etch time and temperature to be critical in controlling the selective removal of interdendritic phase(s). Bond strength values tended to be related to reflection values for some sets of castings. Bond strength values, however, were much lower overall than expected. A significant relationship between clinically meaningful bond strengths and reflection values remains to be determined. GRA

The uptake of CO by Ni/TiO2 and Ni/Ti2O3 was investigated at 25 and 125 C following low-temperature (LT = 250 C) and high-temperature (HT = 450 C) reduction. Infrared spectroscopy was used to identify the onset of nickel carbonyl (Ni(CO)4) formation under various conditions of temperature and pressure. The CO uptake data were modeled using the Langmuir equation for isothermal adsorption. Monolayer coverages and equilibrium constants for CO adsorption were obtained from the uptake data. Carbon monoxide monolayer coverages were not affected by the reduction temperature of either Ni/TiO2 or Ni/Ti2O3. Methanation activity at 275C was approximately a factor of 2 greater for the Ni/TiO2 (LT) than the NiTO2 (HT) catalyst. This correlated well with the relative strength of the CO-metal surface bond, which also decreased by a factor of approximately 2. These findings suggest that the enhanced methanation rate observed on TiO2 supported catalysts is not due to the presence or absence of a strong metal-support interaction condition of the TiO2 but to other properties of TiO2 as compared to other supports. Thin film models of catalysts known to show strong metal support interactions were investigated. These consist of vapor-deposited Pt or Rh on TiO2 films prepared in ultrahigh vacuum by oxidation of Ti(000 + or -). TDS, AES and static SIMS were used to characterize the surfaces before and after thermal treatment in vacuum and with or without chemisorbed CO. The results indicate that heating in vacuum to near 750K leads to migration of a reduced form of titania to the metal film surface, accompanied by suppression of CO and hydrogen chemisorption. In 1 to 2 ML metal films with no surface titania species, no significant suppression of hydrogen chemisorption is seen, indicating that surface segregation alone is not responsible for the changes in hydrogen chemisorption extent and energetics. GRA

EFFECT OF HEAT TREATMENT ON MECHANICAL PROPERTIES AND MICROSTRUCTURE OF FOUR DIFFERENT HEATS OF ASTM A710 STEEL Final Report
G. E. Hicho, C. H. Brady, L. C. Smith, and R. J. Fields Sep. 1985 58 p
(AD-A160831; DTNSRDC/SME-CR-05-85) Avail: NTIS HC A04/MF A01 CSCL 11/6

A710 is a high strength low alloy steel whose strength is a result of both a fine grained microstructure and a dispersion of copper precipitates. For these reasons, the tensile and impact properties of an A710 plate depend as much on the thermo-mechanical history of each plate as on the chemistry of each heat. Since plates shipped from steel suppliers are frequently heat treated under different conditions, it is difficult to attribute property differences to chemistry variations rather than to heat treatment variations or vice versa. Heat to heat property differences must be determined for a specific, known heat treatment. This report describes the variability in the mechanical properties of four plates (representing four heats of steel) that have received known, and carefully controlled, heat treatments at the National Bureau of Standards. The sensitivity of these properties to heat treatment variations within each heat of steel is also reported here. Optical and electron metallographic techniques were used to determine as-received and heat treated microstructures. Scanning electron fractography was used to ascertain the fracture mechanism in the tensile and impact tests. This report also contains two appendices in which splitting fracture and microchemistry observations in A710 are discussed. Author (GRA)

THE BENEFITS OF RECYCLING SILVER: A PRECIOUS METAL M.S. Thesis
M. C. Doyle Sep. 1985 69 p
(AD-A160895; AFIT/GLM/LSM/85S-20) Avail: NTIS HC A04/MF A01 CSCL 11/6

Acquiring precious metals is an important issue within the Department of Defense when producing and sustaining major weapons systems. Due to precious metal shortages, effective deployment of the national defense preparedness program is in jeopardy in case of serious or continuous national emergency. The overall objective of this research study was to explore and determine the benefits of silver recycling. An extensive literature review was necessary to understand the Defense Logistics Agency Precious Metals Recovery Program. Through extensive research of the Precious Metals Recovery Program, it is evident that there are substantial cost savings which transfer into huge benefits resulting from recycling silver. Precious metals are vital in satisfying the United States' contractual and specification requirements needed for strategic arms, ammunition and equipment. Recycling silver is a valid way of satisfying these requirements. Author (GRA)

MICROSTRUCTURE AND PROPERTIES OF SELECTED HIGH STRENGTH FERRITIC WELD METALS
S. P. Abeln, G. S. Huppi, E. L. Brown, D. K. Matlock, and G. R. Edwards 1985 23 p Presented at the International Metallographic Society Conference, Denver, Colo., 21 Jul. 1985 Prepared in cooperation with Colorado School of Mines, Golden
(Contract DE-AC04-76DP-03533)
(DE85-015107; RFP-3856; CONF-850753-4) Avail: NTIS HC A02/MF A01

The fusion zone microstructures of bead on plate welds made on 19mm high strength low alloy (HSLA) steel plates with yield strengths greater than 550MPa (80ksi) were characterized employing optical and transmission electron microscopy. Weld metal composition was varied by base plate and consumable selection. Quantitative metallographic analysis of the weld metal was performed following the International Institute for Welding (IIW) guidelines. Details of the microstructure were further evaluated with the transmission electron microscope. In addition to the ferritic constituents in low alloy steels, significant amounts of retained austenite were present. The microstructural variations are correlated with limited mechanical property data. DOE

CORROSION RESISTANT MATERIALS IN MCFC ENVIRONMENT Technical Quarterly Progress Report No. 3, Apr. - Jun. 1985
1985 29 p refs
(Contract DE-AC21-84MC-21186)
(DE85-017808; DOE/MC-21186/T1; TQPR-3) Avail: NTIS HC A03/MF A01

Corrosion behavior of several alloys has been studied under MCFC exposure conditions. Corrosion tests indicate that the selected higher alloys show protective oxidation and oxide adherence during the thermal cyclic tests, whereas lower alloy steels show localized corrosion and oxide spalling. The oxide formed on high chromium steels containing nickel and rare earth additives shows a uniform growth and uneven metal-scale interface development, whereas a smooth interface has been observed for lower alloy steels. Tests on single alloy materials during the dual atmosphere test indicate that oxides formed in the fuel gas atmosphere act as a barrier against hydrogen corrosion of the metal in the oxidant gas atmosphere. Low temperature conductivity measurements indicate a purely resistive nature of the oxide, demonstrating a dense, uniform oxide layer. Further high temperature measurements are in progress. DOE

PRECIPITATION OF Kr AFTER IMPLANTATION INTO Al
R. C. Birtcher and W. Jaeger Sep. 1985 14 p Presented at the 7th International Conference on Ion Beam Analysis, Berlin, West Germany, 7 Jul. 1985
(Contract W-31-109-eng-38)
(DE85-018344; CONF-850716-3) Avail: NTIS HC A02/MF A01

Transmission electron microscopy (TEM) was used to perform a systematic study of the microstructural evolution in Al as a function of the fluence received during 65 keV Kr(+) ion implantation at room temperature. At the lower fluences (2 x 10(16) to 2 x 10(19) Kr(+)m(-2)), isolated dislocation loops and the evolution of a dislocation network was observed by TEM. Above fluences of 10(19) Kr(+)m(-2), the microstructure is dominated by a high density of Kr bubbles whose average size increases with dose. The appearance of additional electron diffraction reflections indicates that the majority of the bubbles contain solid fcc Kr that is epitaxially aligned with the fcc Al matrix. Above fluences of 2 x 10(20) Kr(+)m(-2) an increasing fraction of the Kr is in a liquid or gas-like phase. The thermal stability of the microstructure, characteristic of the different fluence regimes, was investigated up to 640(0)C by in situ TEM annealing experiments. DOE

EFFECT OF ION IMPLANTATION ON SUBSEQUENT EROSION AND WEAR BEHAVIOR OF SOLIDS
C. J. McHargue 1985 24 p Presented at the North Atlantic Treaty Organization Advanced Study Institute, Heraklion Crete, Greece, 16 Sep. 1985
(Contract DE-AC05-84OR-21400)
(DE86-000088; CONF-8509175-1) Avail: NTIS HC A02/MF A01

The removal of material from a solid surface by mechanical forces is influenced by material properties (hardness, fracture toughness, yield strength, surface free energy) as well as system parameters (force, velocity of loading, environment). Ion implantation can modify many of the material properties either by directly affecting the deformation characteristics or indirectly by affecting the chemical or phase composition at the surface. The various forms of wear and erosion are analyzed to determine the material and system parameters which control material removal. The effects of implantation on these critical parameters are noted and examples of changes in surface topography under various test conditions are discussed. DOE

SURFACE STRESS MODIFICATION FOR REPAIR OF STRESS-RELIEVED CARBON STEEL FABRICATIONS
C. F. Jenkins 1985 19 p refs Presented at the ASM Metals Congress: International Conference on Surface Modifications, Toronto, Ontario, 13 Oct. 1985
(Contract DE-AC09-76SR-00001)
(DE86-000563; DP-MS-85-3; CONF-8510160-1) Avail: NTIS HC A02/MF A01

Pitting corrosion was observed in welded carbon steel tanks which had been stress relieved to improve resistance to stress corrosion cracking. Successful repair required the development of a cleaning and repair method which would not increase residual tensile stresses at the steel surface. An experimental study indicated that uniform residual tensile stresses of 27.6 to 34.5 megapascals (4000 to 5000 psi) remained in the plate after the original stress relief. Grinding, shot peening, and grit blasting were evaluated. In laboratory tests, metal grit blasting changed the average residual stresses at the surface to 34.5 to 69 megapascals (5000 to 10,000 psi) compressive. Moreover, the depth of the compressive zone was substantial - perhaps 138 megapascals (20,000 psi) at 0.25 mm (0.010 inch). This is beneficial and will contribute to an increase in resistance to stress corrosion cracking. The repair technique employed on the tanks consisted of blast cleaning the entire surface to a uniform Class II finish with minimum change in the configuration of the pits. DOE

CADMIUM ZINC SULFIDE/COPPER INDIUM DISELENIDE MODULE DESIGN AND COST ASSESSMENT
B. Jackson Sep. 1985 99 p
(Contract DE-AC02-83CH-10093)
(DE85-016854; SERI/TR-216-2633) Avail: NTIS HC A05/MF A01

The report presents the results of a cadmium zinc sulfide/copper indium diselenide. The primary objective of the research was to clarify several of the technical issues facing the technology development. The design work focused on a large four-foot-square module suited for utility or large scale commercial applications. Cost estimates were developed from detailed descriptions of each manufacturing process step. DOE

A DEVICE FOR TESTING METAL HARDNESS AT HIGH TEMPERATURES Abstract Only
V. I. Zmiyevskiy, Ye. P. Zamilatskiy, and G. N. Smirnov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 4 Transl. into ENGLISH from Zavodskaya Laboratoriya (Moscow, USSR), v. 31, no. 8, Aug. 1985 p 81-82 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

This device consists of a vacuum chamber equipped with a heating unit, a load device, a specimen loading mechanism, a lifting mechanism, and a work platform. Design modifications in the specimen loading mechanism and in the work platform have made it possible to securely load and hold the specimen being tested in the center of the work platform. The loading mechanism was made in the form of two coaxially rotating disks. Rods of varying length are incorporated into the surface of the platform to hold the specimen. The lifting mechanism consists of an electric motor with a reduction gear and a screw mechanism for ease in handling the specimens. This device is capable of consecutive testing of 15 cylindrical specimens 16 millimeters in diameter within a temperature range of 293 to 2200 K. Each specimen can be pricked 300 to 400 times without having to renew the hermetic seal of the chamber. This device was used to test various refractory materials such as 5VTs niobic alloys. Some of the properties tested were hardness, tensile strength, and yield stress as functions of temperature. A practically linear reduction in hardness was observed with an increase in temperature. The other functions behaved in similar fashion. The correlation curves for tensile strength and hardness as a function of temperature were similar to curves obtained from experimental results. This device demonstrated that it can eficiently and reliably evaluate metal hardness at elevated temperatures. Author

KINETICS OF DEFORMATION AND DAMAGE ACCUMULATION IN CONCENTRATION ZONES UPON NONISOTHERMAL LOW-CYCLE LOADING Abstract Only
A. G. Kazantsev, A. P. Gusenkov, and A. N. Chernykh *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 4-5 Transl. into ENGLISH from Problemy Prochnosti (Kiev, USSR), no. 8, Aug. 1985 p 19-24 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

Data are presented on durability of specimens of steel type 15Kh2MFA with elastic stress concentration coefficients of 2.5 and 3.5 under nonisothermal loading. Specimens used had gage sections 1.5 mm thick and 40 mm wide, with sharp side notches and circular central apertures. The specimens were heated in a low-inertia furnace with type KGM quartz-halogen lamps. The specimens were held in water-cooled clamps. Test temperatures varied from 100 to 500 C. The number of cycles to failure was found to depend on the phase of application of the temperature cycle to the loading cycle. Durabilities with loading and temperature in phase were close to the data for a constant temperature of 500 C. In counterphase, the number of cycles to failure averaged two to five times higher. In all cases the divergence of durability calculated considering quasistatic damage accumulation from experimental durability values did not exceed the corresponding divergence of smooth specimens. The differences in durabilities with isothermal and nonisothermal loading conditions resulted only from the deformation properties of the material in the temperature range studied. Author

INFLUENCE OF STRESS CONCENTRATION ON FATIGUE AND CORROSION-FATIGUE PROPERTIES OF VAL10 ALUMINUM CASTING ALLOY AND AK6 ALUMINUM FORGING ALLOY Abstract Only
A. V. Karlashov, V. M. Polishchuk, A. D. Gnatyuk, and V. M. Beletskiy *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 5 Transl. into ENGLISH from Problemy Prochnosti (Kiev, USSR), no. 8, Aug. 1985 p 24-29 Original language document was announced in IAA as A85-48367 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

Experimental data are presented on the effect of a corrosive environment and stress concentration on the fatigue resistance of cast (VAL1:00) and wrought (AK6) aluminum alloys. It is found that the fatigue resistance of VAL10 depends on the porosity of the casting. In the case of AK6 alloy, the anisotropy of its fatigue properties associated with the texture orientation is insignificant. A 1-mm notch reduces the fatigue life of AK6 by 36-40 percent, irrespective of the est base. For notched specimens of VAL10, the decrease in fatigue life is 24 to 40 percent depending on the test base. V.L. (AIAA)

INFLUENCE OF TEMPERATURE ON MICROPLASTICITY AND CYCLICAL STRENGTH OF 1201 ALLOY Abstract Only
G. V. Seregin *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 6 Transl. into ENGLISH from Problemy Prochnosti (Kiev, USSR), no. 8, Aug. 1985 p 29-31 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A study was made of the influence of test temperature on microplasticity and fatigue durability of aluminum alloy type 1201. Diagrams of cyclical deformation of cylindrical specimens by tortion were compiled to study the microplastic properties of the alloy. Microplasticity parameters produced by this method were compared with results of fatigue testing of flat specimens by extension. Microdeformation by tortion was conducted at 77, 173, 223, 292, 323, 373, 423 and 473 K, with a deformation rate of 10 to the -5/s. The fraction stress preventing movement of dislocations was found to be practically independent of test temperature. There is a safe cycle stress amplitude for which the cyclical durability of the specimens approaches infinity. At temperatures above room temperature, this amplitude has little to do with test temperature and correlates well with friction stress. Author

LOW-CYCLE FATIGUE AND CRACK RESISTANCE OF BOILER PIPES AND STEAM LINES MADE OF 12Kh1MF STEEL Abstract Only
V. G. Zelenskiy, A. V. Fedoseyenko, V. A. Sarkisyan and V. V. Sevryugin *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 6 Transl. into ENGLISH from Problemy Prochnosti (Kiev, USSR), no. 8, Aug. 1985 p 6 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A study is made of the characteristics of low-cycle fatigue and crack resistance of 12Kh1MF steel by testing specimens and actual sections of steam lines made from a single batch of pipe with 194 mm outside diameter and wall 36-39 mm thickness. Low-cycle fatigue and crack resistance tests were performed, plus standard long-term strength tests and tests of chemical composition and mechanical properties. The test results all corresponded to the technical requirements for steam lines and were average for this type of steel. At all stress levels, failure occurred without deformation. The ratio of the number of load cycles to failure after formation of cracks to the total number of cycles to failure was 0.2 to 0.5, varying with the stress level. Crack development rate in steam lines during testing with mean crack depth 13 to 17 mm was significant, 1.76 to 3.5 x .0 mm per cycle. Author

STUDY OF CRACK RESISTANCE OF CORROSION-RESISTANT GLASS-REINFORCED PLASTICS BY ACOUSTICAL EMISSION METHODS Abstract Only
V. N. Naumets, A. T. Nikiforov, I. S. Guz, V. V. Bulakh, L. T. Berezhnitskiy, and L. V. Nagirnyy *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 7 Transl. into ENGLISH from Problemy Prochnosti (Kiev, USSR), no. 8, Aug. 1985 p 35-39 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The crack resistance of corrosion-resistant glass-reinforced plastics (CRGRP), the resistance of the material to formation of cracks and resistance to propagation of existing cracks, is determined by an acoustical emissions method. Studies were performed on flat wedge-shaped specimens. Composite specimens were exposed in the unstressed state to aqueous solutions of alkali and hydrochloric acid by immersion in the corrosive media in glass desiccators contained in heat chambers. The specimens were tensile-tested before and after exposure to the corrosive media. Acoustical emission signals were recorded in analog form in the 100 to 2,000 kHz band. The signals were used to establish the stages of formation and propagation of cracks for all types of CRGRP. The experiments indicate that the theoretical defined variation between coefficients expressing the rate of formation and of development of cracks in CRGRP composites needs further study. Author

CONTACT FATIGUE UPON LOW-CYCLE LOADING OF WC-Co HARD ALLOYS DESIGNED FOR PRESSURE WORKING OF METALS Abstract Only
V. A. Falkovskiy, M. V. Kuralina, G. G. Travushkin, and Yu. Ye. Tyablikov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 7 Transl. into ENGLISH from Problemy Prochnosti (Kiev, USSR), no. 8, Aug. 1985 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

Results are presented from studies of contact fatigue with continuous recording of damage upon compression loading of hard alloys designed for the manufacture of punching dyes. New alloys were studied, made of high temperature powders -- large grain materials with tungsten carbide grain size 3.5-4.0 microns (VK10KS, VK15KS and VK20KS) and medium grain with grain size 2.2 to 2.5 microns (VK15S). For comparison, the standard alloy VK20 with grain size 2.2 to 2.5 microns was also studied. The longest life between reworking was that of VK15-S (about 990,000 stamps). The test method allows an approximation under laboratory conditions of the actual loading conditions of the dyes, permitting prediction of the behavior of the alloy under operating conditions. All of the alloys made with high temperature tungsten and tungsten carbide powders had better resistance to microfracture than the VK20 alloy based on low-temperature powder. Author

DEFORMATION AND VARIABLE LOADING OF METAL-POLYMER TWO-LAYER PLATES Abstract Only c27
V. V. Moskvitin and E. I. Starovoytov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 11 Transl. into ENGLISH from Mekhanika Kompozitnykh Materialov (Riga, USSR), no. 3, May - Jun. 1985 p 409-416 Original language document was announced in IAA as A85-44168 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A new formulation of the problem concerning the variable loading of metal-polymer plates is examined, with allowance made for transverse deformation in the polymer layer. Physical equations of state are used which describe the viscoelastoplastic properties of the metal and the nonlinearly viscoelastic properties of the polymer, allowing for the presence of zones with linear material properties during deformation. The problem of arbitrary variable loading is reduced to that of determining the deformation of a plate in the case of loading from the natural state, with specific boundary value problems solved by the method of successive approximation. The bending problem for a circular two-layer metal-polymer plate is solved analytically and numerically to illustrate the proposed approach. V.L. (AIAA)

PROPERTIES OF CARBON-GLASS PLASTIC MATERIAL UNDER PURE FLEXURE Abstract Only c24
I. G. Zhigyn, G. A. Pavlov, V. G. Gorban, and V. A. Polyakov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 12 Transl. into ENGLISH from Mekhanika Kompozitnykh Materialov (Riga, USSR), no. 3, May - Jun. 1985 p 417-422 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A representative series of hybrid composite plastic materials, namely combinations of T-P-GVS-9 glass cloth and LU-P-0.2 carbon tape with PN-609-27 polyester resin as binder, was tested for load capacity under pure flexure depending on the volume (thickness) ratio and the distribution of components. The feasibility of testing such materials by simple methods applicable to nonhomogeneous beams was studied. The test specimens were 3.2 to 3.5 mm thick plates consisting of carbon-fiber and glass-fiber layers, the carbon fibers oriented parallel to the cloth substrate and impregnated with resin. These plates were vacuum-pressed in special molds for uniform buildup of pressure from the center to the edges so as to ensure a stable thickness of monolayers with the maximum volume fraction of reinforcement. Three kinds of structures were thus produced and tested: (1) double-layer plates with a carbon-fiber upper layer and a glass-fiber lower layer; (2) symmetric triple-layer plates with a glass-fiber layer between two carbon-fiber layers of same thickness; (3) asymmetric triple-layer plates with a glass-fiber layer between two carbon-fiber layers of different thicknesses. In each case increasing the thickness of the carbon-fiber layers at the expense of the glass-fiber so as to maintain the same total plate thickness was found to increase the effective modulus of elasticity and the load capacity of the plate. A symmetric triple-layer plate was, moreover, found to have consistently a higher load capacity than an asymmetric one. The experimental data correlate well with theoretical values of the modulus of elasticity based on the relations of beam mechanics with known physical properties of the materials and geometrical dimensions of the layers. STRESSED-STRAINED STATE OF TRIPLE-LAYER HONEY-COMB PANELS WITH CARBON-PLASTIC SHEATHS Abstract Only c24
V. T. Shcherbakov, V. S. Vedneva, Yu. V. Kirillov, and V. M. Muratov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 14 Transl. into ENGLISH from Mekhanika Kompozitnykh Materialov (Riga, USSR), no. 3, May - Jun. 1985 p 486-491 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The load capacity of triple-layer flat and cylindrical panels containing a low-modulus honeycomb filler between two high-modulus carbonplastic sheaths is determined theoretically and from experimental data, following an analysis of their stressed-strained state under a compound four-point flexural and axial compressive loads. Tests were performed on girders, which are much more easily clamped and tested in tension or compression than plain panels with relatively thin carbon-plastic sheaths. Calculations were made by the finite method, including a triangular triplelayer panel as a special finite element, according to the FRONT program. The data thus obtained, including the effective moduli of elasticity

and Poisson ratios, cover three reinforcement schemes: (+ or - 30 deg/0 deg sub 1/2)s, (+ or - 45 deg/0 deg sub 1/2)s, (+ or - 60 deg/ 0 deg sub 1/2)s with 0.65 or 0.63 mm thick sheaths and correspondingly 5 or 10 mm high filler. Anisotropic carbon filler KMU-4L and orthotropic fillers of PSP-2N polystyrene foam, aluminum, and paper were considered for both testing and calculations. Author

CORROSION RESISTANCE OF JOINTS MADE BY DIFFUSION WELDING Abstract Only c37
A. A. Mikheyev, N. F. Kazakov, and A. V. Finkelshteyn *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 16 Transl. into ENGLISH from Avtomaticheskaya Svarka (Kiev, USSR), no. 8, Aug. 1985 p 59-61 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The corrosion of joints obtained by diffusion welding is studied. The significance of the diffusion process responsible for formation of the heterogeneous seam metal structure is determined. The influence of technological welding parameters on corrosion resistance of joints is studied. The corrosion resistant steel type 12Kh18N10T and the magnetic alloy 49K2F, containing 48 to 50% Co, 1.7 to 2.1% V, remainder iron was examined. Bimetallic joints of these materials are widely used in industry. Specimens were welded at 1170, 1220, 1270 and 1320 K, pressure 9.8 MPa, welding time 20 minutes. It was determined that the degree and nature of the change of electrode potential in the welding zone are determined to a great extent by electrode composition, i.e., are dependent on diffusion processes. Microscopic X-ray spectral analysis showed that the diffusion of chromium and titanium from the corrosion resistant steel into the magnetic alloy leads to the formation of a transition zone between the two metals with corrosion resistance higher than that of the magnetic alloy. The corrosion resistance of the joint is influenced by other factors than diffusion as well, resulting from thermal deformation processes during welding. An increased tendency toward corrosion is observed in welded joints obtained at temperatures less than 1270 K, a result of insufficient development of diffusion processes at the lower temperatures. Author

INCREASING THE CORROSION RESISTANCE OF WELDED JOINTS IN A85 ALUMINUM Abstract Only
M. I. Zotov, I. V. Dovbishchenko, and A. I. Trush *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 17 Transl. into ENGLISH from Avtomaticheskaya Svarka (Kiev, USSR), no. 8, Aug. 1985 p 62-64 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A comparison is presented of the effectiveness of various methods of eliminating edge incomplete melting defects in explosively welded lap joints in A85 aluminum. Methods compared include melting of the defect area by manual and mechanized argon-arc welding in combination with cold hardening of the metal and without cold hardening, as well as mechanical working. The criterion of effectiveness of the method was the corrosion resistance of joints in 50% nitric acid at the boiling point, test time 20 hours. Melting of the edges with mechanized argon-arc welding and subsequent cold hardening of the melted metal is judged effective. Elimination of defects by mechanical working can prevent extension of corrosion along the straight interface edge. If the plate which is thrown by the explosion contains 0.22% iron and 0.1 silicon, its corrosion resistance decreases, making this composition unsuitable for nitric acid production equipment. Author

EFFECT OF MEDIUM pH ON HYDROGEN PERMEABILITY OF PASSIVATING FILMS AND RATE OF GROWTH OF CORROSION CRACKS IN 40KhN STEEL Abstract Only
I. N. Dmytrakh and R. S. Grabovskiy *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 17-18 Transl. into ENGLISH from Fiziko-Khimicheskaya Mekhanika Materialov (Kiev, USSR), v. 21, no. 4, Jul. - Aug. 1985 p 22-25 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

Scholarly opinion holds that hydrogen embrittlement is the key force behind formation of corrosion cracks in high-durability steels under static loads. Electrochemical reactions on the surface related to the pH factor of a corrosive medium are a contributing factor. The connection between medium pH and hydrogen permeability of the passive layer at the electrolyte-metal interface is discussed. Highly durable, rigid 40KhN tempered at 860 C was subjected to an aqueous solution of NaCl with pH of 6.5 to 6.7. Tests were conducted at 25 C. Static corrosion resistance to cracking was studied by pure bending under load. Experimental results indicated that the pH of the medium not only played a role in hydrogen formation, but also altered the hydrogen permeability of passive films at the medium-metal interface. As pH increased, hydrogen permeability declined, especially in the range of $3<pH<4$. Development of corrosion cracks was analogous. Author

ROLE OF MARTENSITE CONVERSION IN HYDROGEN EMBRITTLEMENT OF UNSTABLE AUSTENITE STEELS Abstract Only
G. G. Maksimovich, I. Yu. Tretyak, L. M. Ivaskevich, and T. V. Slipchenko *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 18 Transl. into ENGLISH from Fiziko-Khimicheskaya Mekhanika Materialov (Kiev, USSR), v. 21, no. 4, Jul. - Aug. 1983 p 29-32 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The plasticity and durability of unstable austenite steels depend on the intensity of martensite conversions during deformation; these processes are regulated by alloying parameters and mechanical and thermomechanical factors. The present article reports on features of deformation martensite conversions and hydrogen embrittlement of 12Kh18N10T and 06Kh18N5G9AB steels with various procedures for hydrogen application. Samples tempered at 1273 K, some of which were hydrogenated at 35 MPa and 623 K for 5 hours were subjected to short-term tension. Phase transformations during hydrogen embrittlement were attributed to preliminary deformation in air at room temperature at 10 to the -4/s. Results showed that martensite conversion in 12Kh18N10T steel began at about 20% deformation regardless of test conditions. A correlation between changes in the quantity of alpha-martensite and the degree of embrittlement is suggested. In 06Kh18N5G9AB steel, martensite conversion in hydrogenated samples was more intensive, so that relaxation limits were reached more quickly. Its plasticity did not decline appreciably in an external hydrogen medium, but fell noticeably after prior hydrogenation during tension in either a hydrogen or a neutral medium. This steel had better durability and plasticity than the 12Kh18N10T steel. Author

EFFECT OF INHIBITORS ON ELECTROCHEMICAL CONDITIONS DURING TESTS OF SPECIMENS OF 40 Kh STEEL FOR STATIC CORROSION CRACKING RESISTANCE Abstract Only
L. V. Ratych and I. M. Slobodyan *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 19 Transl. into ENGLISH from Fiziko-Khimicheskaya Mekhanika Materialov (Kiev, USSR), v. 21, no. 4, Jul. - Aug. 1985 p 32-37 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

Study of inhibitors of corrosion cracking that retard both the initiation and spread of cracks has been based on tests of cracking resistance without consideration of surface electrochemical factors. Various inhibiting mechanisms affecting electrochemical conditions on the surface and at the top of stationary cracks were studied. The methodology involved drilling holes for capillaries that contained an antimony oxide pH indicator and an agar-agar conductive mixture for electrolyte contact. Corrosion tests were made on 40 Kh steel, which has 0.44% C, 0.45 Mn, 0.22 Si, 0.022 P, 0.020 S, and 0.79% Cr. After oil hardening at 860 C and subsequent tempering at 200 C for a total of two hours, inhibitors with anode action ($K_2Cr_2O_7$ and $NaNO_2$) or cathode

action ($ZnSO_4$) were tested on the steel specimens. Results showed that in distilled water, the pH factor gradually declined while the differences in electrical potential increased, intensifying corrosive processes. Significant amounts of anodic-action inhibitors (more than 0.04 M of potassium bichromate, and 0.1 M of sodium nitrite) were required in order to prevent formation of atomic hydrogen and subsequent embrittlement. Regardless of the concentration, zinc sulfate increased H_2 formation and resultant corrosion. Author

PHOTON EMISSION IN DEFORMATION AND FAILURE OF METALS Abstract Only
A. A. Tupik, N. P. Valuyev, and A. Ya. Belenkiy *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 19-20 Transl. into ENGLISH from Fiziko-Khimicheskaya Mekhanika Materialov (Kiev, USSR), v. 21, no. 4, Jul. - Aug. 1985 p 51-57 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The present article reports on study of the temporal features of photon emission and its possible physical mechanisms. The procedure used involved registration of electromagnetic radiation, light isolation, and thermostatic control. Samples in the form of parallelepipeds were scored to provide a starting point for cracking, then loaded symmetrically while the physical factors enumerated above were measured. All of the steels and ferrous alloys tested, as well as other elements with varying chemical activity and bonding energy, showed evidence of the electromagnetic radiation, in the spectral range of 300 to 1100 nm for steels and 650 to 1500 nm for alloy D16. No special radiation was associated with the failure of the metals, since any radiation caused by the failure of interatomic bonds and dislocation motion was simultaneous. Optical radiation related to chemsorption is discussed. Definitive resolution of the question of the origin of radiation during deformation of metals requires further research. Author

CRACKING RESISTANCE OF POLYCARBONATE AND POLYMETHYLMETHACRYLATE AT HIGH LOADING RATES Abstract Only c27
A. S. Yeremenko, S. A. Novikov, V. A. Sinitsyn, and A. A. Girin *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 20 Transl. into ENGLISH from Fiziko-Khimicheskaya Mekhanika Materialov (Kiev, USSR), v. 21, no. 4, Jul. - Aug. 1985 p 80-83 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

Recently the linear mechanics of failure have received considerable attention in regard to the failure characteristics of polymer materials, whose mechanical properties depend greatly on temperature and rate factors in loading. The present article reports on a method for high-speed testing of crack resistance using a Hopkinson compound rod (HCR) and a special split-axis specimen. The HCP provided a diagram of load-shift in the compressed rod in traditional tests. In the present tests, disks of polymethyle methacrylate (PMMA) and polycarbonate (PK-1) were examined in a temperature range of -15 + or - 1 to +20 + or - 1 C, with regulation of the loading rate, and simultaneous analysis of splitting. A linear correlation was observed until the sudden failure. The dependency at -15 C is shifted to the right, indicating the rate of temperature increase as load increases in PMMA. Author

EFFECT OF HARDENING TREATMENTS ON MICROFLUIDITY OF STEELS AND BRONZES Abstract Only
I. I. Ilinskiy *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 21 Transl. into ENGLISH from Fiziko-Khimicheskaya Mekhanika Materialov (Kiev, USSR), v. 21, no. 4, Jul. - Aug. 1985 p 83-86 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The present article reports on study of the effects of heat treatment, including annealing, hardening, hardening tempering, plastic deformation and low-temperature strain aging on microfluidity. One to three stages of deformation tempering were noted in the range of residual deformation of 4.10 to the minus 7 power to 1.10 to the minus 4 power for the test materials. The amount of carbon was a key to the parameters examined. The first stage of microfluidity was observed in armco-steel, while it did not appear in 45, 65G or U8A steel. Up to a certain level, plastic flow was connected to the heterogeneous formation of dislocations and shifts in edge components. In a third stage, microfluidity is defined by the separation of dislocations from impurity clouds, activation of helical components and the development of transverse slippage. Deformation aging of steels markedly increased the critical microfluidity tension (20+150%) and the rate of deformation hardening at stage 2 (9+12%) (the lower values indicate natural aging). Critical microfluidity tension approached the yield point. In contrast to steels, bronzes showed increased resistance to deformation at all stages of microfluidity. Author

TRIBOTECHNICAL CHARACTERISTICS OF BALL BEARING STEEL AFTER CHROMIZING Abstract Only
G. L. Oganesyan and G. N. Dubinin *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 42-43 Transl. into ENGLISH from Izvestiya Vysshikh Uchebnykh Zavedeniy: Chernaya Metallurgiya (Moscow, USSR), no. 8, Aug. 1985 p 89-93 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The present article reports on the effect of chromizing on the tribotechnical features of ShKh15 and 55M5FA steels. A gas method of chromium saturation in a mixture of 50 percent Cr, 47 percent Al_2O_3 and 3 percent NH_4Cl at 850 to 1000 C was used, with a saturation time of 1 to 9 hours. Since the extreme hardness of the carbide layer of test bearings ensured high wear resistance, a corresponding study was made of specimens of the test steels that had undergone chromizing at 950 C for 6 hours, and residual tension in the diffusion zone was determined to correlate the results of the various combinations tested. The data obtained showed that increasing the relative wear resistance of the test steels correlated with increased residual tension of compression and electron emission, thus confirming the importance of both structural and energy states of bearing surfaces in determining wear resistance. Chromizing of ShKh15 steel at 950 C for 6 hours brought about worsened mechanical properties, such as impact strength, but at 850 C, and with subsequent standard heat treatment, those properties improved. For 55SM5FA steel, the process at 950 C, with subsequent standard heat treatment, brought an 18% improvement in impact strength. Author

INFLUENCE OF ELASTIC-STRESS STATE CREATED BY COATINGS ON THE MAGNETIC PROPERTIES OF THE ALLOY Fe-3 PERCENT Si Abstract Only
R. B. Puzhevich, V. G. Borisenko, and V. K. Chistyakov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 43 Transl. into ENGLISH from Izvestiya Akademii Nauk: Seriya Fizicheskaya (Moscow, USSR), v. 49, no. 8, Aug. 1985 p 1576-1580 (For primary document see N86-18510

09-26)
Avail: NTIS HC A06

A study is made of the influence of tensile stress on magnetic properties of the alloy Fe-3%Si as a function of the degree of textural perfection (110) [001], amplitude of magnetic induction upon remagnetization of the material, surface status and specimen thickness. Several groups of specimens measuring 0.30 to 0.35 x 30 x 280 mm with different values of magnetic inducation sub 2500. The value of this parameter was used to judge the degree of perfection of the texture. The effectiveness of the influence of elastic tensile stresses on decreasing magnetic losses in the alloy increases with an increase in textural perfection, crystalline size, amplitude of magnetic inducation used in magnetization of the material and a decrease in specimen thickness. The influence of a magnesium silicate oxide layer on magnetic losses is ambiguous. It is characteristic that losses increase with imperfect crystallographic texture and decrease in a highly textured material. With the proper composition of phosphate electric insulating coatings, the tensile stress created in the matrix and resulting decrease in magnetic losses increase with increasing coating formation temperature. PAINTING STAINLESS STEEL WITH ALTERNATING CURRENT Abstract Only
N. V. Mogorin *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 49 Transl. into ENGLISH from Elektronnaya Obrabotka Materialov (Kishinev, USSR), no. 4, Jul. - Aug. 1983 p 24-27 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

Stainless steels with relatively thick oxide films for protection and appearance receive wide use. The present article reports on a simplified electrolyte with reduced temperature in a variable asymmetrical flow by using a 5% solution of sulfuric acid. Increases in the capacitor current along with increased frequency and reduced polarization resistance caused the electrode to function as a condensor, with a significant decline in Faraday current. This phenomenon was used in testing electrodes with thin oxide films. Films on steel Kh25 formed at a potential of +0.3 V in a 50 Hz current were composed of Fe3O4 oxide. The electronogram for the film on Kh20N80 was amorphous, with no crystalline structure. The films appeared to be highly resistant to corrosion and had an attractive appearance. Author

EFFECT OF PROLONGED HIGH TEMPERATURE AGING ON OPERATING PROPERTIES OF 15Kh1M1F STEEL Abstract Only
A. P. Smirnova, I. I. Mints, and M. M. Shteynberg *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 56 Transl. into ENGLISH from Teploenergetika (Moscow, USSR), no. 6, Jun. 1985 p 45-47 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The effect of prolonged aging was assessed for hot-rolled 15Kh1M1F steel (0.16% C, 0.35% Si, 0.64% Mn, 1.47% Cr, 0.95% Mo, 0.29% V, 0.022% S and 0.020% P). The structure was examined at room temperature, prior to aging at 600 C for 10 to the 9th power hours. X-ray analysis showed no recrystallization. Short-term tests showed that durability decreased slightly while plasticity was retained, impact strength was cut at normal temperature but increased somewhat at 560 C, and the cold brittleness threshold increased markedly. Further testing showed the emergence of reversible temper brittleness in the test steel, which was not attributed to emission of Mo2C particles, but was related to molybdenum loss by the alloy. Aging weakened the effect of the structural state on long-term durability of the material, and aging at 600 C for 10 to the 4th power hours caused a marked decrease in the impact strength of the test steel. Author

EFFECT OF GRAPHITE COCRYSTALLIZATION GROWTH OF DIAMOND SINGLE CRYSTALS IN METAL-CARBON SYSTEM Abstract Only
V. A. Laptev, A. V. Pomchalov, L. D. Belimenko, and M. I. Samoylovich *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 78-79 Transl. into ENGLISH from Noerganicheskiye Material (Moscow, USSR), v. 21, no. 8, Aug. 1985 p 1316-1320 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A study of diamond crystallization in a metal-carbon system was made in order to determine the effect of attendant graphite crystallization on the process. A special series of experiments was performed under conditions favoring spontaneous growth of diamond single crystals, at temperatures of 1150 to 1250 C under pressures of 4.2 to 4.5 GPa. Polycrystalline graphite served as the source of carbon, and binary alloys of Ni, Mn, Co served as solvents. Residual graphite after the process was mechanically separated, whereupon three groups of specimens were further examined: (1) specimens of graphite which had been in contact with the molten metal and did not contain any diamond; (2) specimens of metal, mainly in the form of 0.05 to 0.8 mm thick film, separating diamond from the carbon sources; and (3) specimens taken from the reaction zone and containing metal as well as diamond and recrystallized graphite. Subsequent microstructural examination revealed an inhibiting effect of graphite crystallization on spontaneous growth of diamond single crystals during synthetic production of the latter, with a high probability of graphite single crystals also forming in the process. PROPERTIES OF TiC POWDERS PRODUCED FROM TITANIUM OR TITANIUM-ALLOY CHIPS Abstract Only
S. S. Kiparisov, Yu. V. Levinskiy, O. V. Padalko, A. P. Petrov, and I. P. Deulina *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 85 Transl. into ENGLISH from Poroshkovaya Metallurgiya (Kiev, USSR), no. 8, Aug. 1985 p 12-16 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A low-cost method of producing TiC powders has been developed, namely from titanium or titanium-alloy chips by carbidizing them in two stages in graphite crucibles. This was done experimentally with chips of VT-1, VT-3-1, and VT-20 titanium alloys under three different conditions: (1) under vacuum; (2) in an argon atmosphere; and (3) in a hydrogen atmosphere. Granulometric analysis of the product, after comminution of the sintered mass by tumbling for 15 min with hard-alloy balls in a vibrator-mill containing ethyl alcohol as immersion fluid, revealed an approximately same grain size distribution regardless of the process condition, with the mean size of most carbide grains respectively 7.9, 8.2, and 8.3 micrometer. Chemical analysis revealed an approximately same content of bound carbon regardless of the process condition, and slightly less bound carbon but much more detrimental free carbon in carbide produced in a hydrogen atmosphere. This leaves an argon atmosphere or vacuum as suitable alternatives. The levels of oxygen and nitrogen as well as those of bound and free carbon under those conditions were found to be comparable, whether VT-3-1 or VT-20 chips or technically pure titanium or VT-1 alloy chips had been used. DEFORMATION OF Al-Cu POWDER BODIES DURING LIQUID-PHASE SINTERING Abstract Only
A. P. Savitskiy, G. N. Romanov, and L. S. Martsunova *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 86 Transl. into ENGLISH from Poroshkovaya Metallurgiya (Kiev, USSR), no. 8, Aug. 1985 p 39-43 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A dilatometric study of Al-Cu powders was made for monitoring the volume changes at various temperatures during the sintering process. Powder of ACD-1 aluminum was mixed with powder of electrolytic copper, the latter added in amounts of 1 to 6 wt.% and its grain size not exceeding 50 micrometer, producing a mixture with an initial porosity of 21 to 23%. Temperature and volume were recorded synchronously, also continuously each, for measurement of volume changes over the critical 560 to 640 C temperature range. The results reveal expansion followed by shrinkage at higher temperatures and expansion with negligible or no subsequent shrinkage at lower temperatures. Copper plays a significant role in the volume changes, diffusion of copper atoms from the melt into aluminum particles being the principal mechanisms and the solubility of copper in aluminum being limited. The behavior of these powder mixtures during sintering depends, accordingly, on the copper content in accordance with the Al-Cu constitution diagram: shrinkage never follows expansion at temperatures which correspond to equilibrium within the solid-solution (alpha-phase) range and shrinkage always follows expansion at temperatures which correspond to coexistence of both solid and liquid phases. IMPROVING PERFORMANCE OF HARD-ALLOY PLATES BY THERMOMAGNETIC ABRASION TREATMENT Abstract Only
V. Ya. Shiyuko, T. Ya. Gridasova, V. Ye. Oliker, A. F. Zhornyak, L. A. Karpova, and A. A. Zlenko *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 88-89 Transl. into ENGLISH from Poroshkovaya Metallurgiya (Kiev, USSR), no. 8, Aug. 1985 p 65-70 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The performance of polyhedral plates made of hard alloys with high-resistance coatings, and thus not remachinable, is greatly enhanced by magnetic-abrasive polishing. This treatment not only smoothens and straightens the cutting edges while ensuring the proper rounding radius, but particularly lengthens the tool life and reduces the failure rate associated with chipping. The efficiency of this treatment can, in turn, be enhanced by ensuring a sufficiently large difference between hardness of the abrasive tool component and hardness of the treated material. Increasing the hardness of the former is not practical, inasmuch as the limit has already been approached with inclusions of extra-hard refractive compounds and the use of diamond grains is uneconomical because of their high cost and weak bonding to a ferromagnetic matrix. This combined thermomagnetic-abrasion treatment was evaluated experimentally on plates made of TN20, KNT16, T5K10, T15K6, VK6, VK8 alloys with Fe-TiC, Fe-ZrC, Fe-NbC, Fe-WC, Fe-WC-TiC, Fe-Al2O3 magnetic-abrasive powders. SURFACE HARDENING OF GAS TURBINE ENGINE VANES IN AN ULTRASONIC FIELD Abstract Only
V. K. Yatsenko, I. A. Stebelkov, V. F. Pritchenko, S. B. Mikhaylov, and Yu. P. Kichayev *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 96 Transl. into ENGLISH from Problemy Prochnosti (Kiev, USSR), no. 8, Aug. 1985 p 68-71 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

The effectiveness of hardening of gas turbine vanes by surface plastic deformation in an ultrasonic field is largely determined by the selection of the optimal conditions. The optimal conditions for surface hardening refer to the conditions of deformation providing sufficient durability of the vanes under alternating loadings and the capability to withstand impact bending loads when foreign objects enter the engine. Tests of the fatigue properties of specimens of VT8 and EP718 alloys were undertaken to determine the optimal hardening conditions. Specimens were hardened in an ultrasonic field using balls 2.35 and 1.3 mm in diameter in a special ultrasonic device for ten minutes. Fatigue testing of cantilever mounted specimens was conducted in a type VEDS-200 vibrating test stand on the basis of 10 to the 7th power cycles until the appearance of macroscopic cracks. The greatest effect was observed upon hardening of VT8 or EP718 by 1.3 mm diameter balls. The use of 2.35 mm diameter balls actually decreased the endurance of VT8 by 2%. Strain hardening does not actually increase the resistance of the vanes to impact loading. Author

PRODUCTION OF VACUUM-TIGHT JOINTS IN MATERIALS BY DIFFUSION WELDING Abstract Only c37
G. V. Konyushkov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 98 Transl. into ENGLISH from Avtomaticheskaya Svarka (Kiev, USSR), no. 8, Aug. 1985 p 25-28 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

A study is made of the production of vacuum-tight joints in materials or the electronics industry by diffusion welding. It is found that increasing the vacuum while maintaining a primarily reducing atmosphere intensifies the removal of oxide films at temperatures below 800 C and improves contact formation conditions for diffusion welding. Under conditions typical for diffusion welding pores are healed and crystals deformed, decreasing hydrogen permeability by at least an order of magnitude. Blowing of a mixture of helium and hydrogen through gaps between parts to be welded during welding makes it possible to determine the moment when a joint becomes vacuum-tight. Author

INFLUENCE OF CHEMICAL COMPOSITION OF FLUX ON DUCTILITY OF SEAM METAL IN ELECTROSLAG WELDING Abstract Only c37
M. D. Modzhuk, M. B. Roshchin, and N. N. Potapov *In its* USSR Report: Materials Science and Metallurgy (JPRS-UMS-85-009) 5 Dec. 1985 p 98-99 Transl. into ENGLISH from Avtomaticheskay Svarka (Kiev, USSR), no. 6, Aug. 1985 p 57-58 (For primary document see N86-18510 09-26)
Avail: NTIS HC A06

In order to determine the influence of chemical composition of flux on composition of type 10GN2MFA steel, electroslag remelting of electrodes was performed in a crystallizer using three experimental fluxes plus type OF-6 standard flux. The SiO2 content in the experimental fluxes was 12, 19 and 31%, the CaF2 content 47, 39 and 28%. The content of CaO an Al2O3 in all fluxes was 18 and 22%, respectively. The experimental fluxes had higher SiO2 and lower CaF2 content than type OF-6 flux. The use of fluxes with higher silica content resulted in the formation of silicate inclusions such as spessartite, mullite, etc., in the surfaced metal, which do not cause stresses upon heating as does alumina. This helps to increase the ductility of the metal of the seam upon repeated heating. Author

PLASTICIZATION OF GLASSY POLYMERS BY CO(2)
J. S. Chiou, J. W. Barlow, and D. R. Paul 1985 7 p Repr. from Journal of Applied Polymer Science, v. 30, 1985 p 2633-2642
(Contract DAAG29-84-K-0138)
(AD-A159772; ARO-21387.3-CH) Avail: NTIS HC A02/MF A01 CSCL 11/9

A technique is described which uses differential scanning calorimetry to estimate the glass transition of polymers containing a dissolved gas. The technique is simple and appears to give reliable results. The effects of CO2 sorption at pressures up to 25 atm were examined in detail for poly(methyl methacrylate) and its blends with poly(vinylidene fluoride). Less extensive results for polystyrene, polycarbonate, poly(vinyl chloride), and poly(ethylene terephthalate) are also given. Reductions in T sub g, of up to 50 C are observed. A theoretical relation by Chow predicts results in reasonable agreement with the experimental data. These findings are relevant to various applications such as membrane separation processes for gases. Author (GRA)

BLOCK COPOLYMERS OF ISOTACTIC POLYPROPYLENE AND 1,4 POLYBUTADIENE Technical Report
M. A. Drzewinski and R. E. Cohen 24 Sep. 1985 20 p
(Contract N00014-77-C-0311)
(AD-A160147; TR-16) Avail: NTIS HC A02/MF A01 CSCL 07/3

Two block copolymers of isotactic polypropylene and 1,4 polybutadiene were synthesized using techniques involving a transformation from anionic to Ziegler-Natta polymerization mechanisms. The yield of block copolymer was about fifteen percent (weight basis) in both polymerizations, the remainder being unreacted polybutadiene from the first block synthesis. Molecular characterization experiments and model reactions were consistent with a block-like structure for the copolymers; definitive evidence for the proposed molecular structure was obtained through transmission electron microscopy which clearly revealed microphase-separated morphologies characteristic of block copolymers. AGEING-TIME DEPENDENCE OF MECHANICAL PROPERTIES OF AN ELASTOMERIC GLASS Interim Technical Report
K. D. Pae, K. Vijayan, and C. L. Tang 1 Oct. 1985 11 p
(Contract N00014-82-K-0608)
(AD-A160261; TR-4) Avail: NTIS HC A02/MF A01 CSCL 11/2

Compressive stress-strain curves of two different glasses of a polyurethane based elastomer have been obtained at 3 Kbar and -5.5 C as a function of ageing time. The glasses were formed by two different perturbation jumps of pressure and temperature. The shape and the size of the curves depended on the path and ageing time. Young's modulus increased with ageing time and represents a good mechanical parameter for determining relaxation of polymer glasses. GRA

EFFECT OF SIMPLE STRESS ON THE GLASS TRANSITION OF POLYMERS AT HIGH PRESSURE Interim Technical Report
K. D. Pae, C. L. Tang, and K. Vijayan 1 Oct. 1985 31 p
(Contract N00014-82-K-0608)
(AD-A160282; TR-5) Avail: NTIS HC A03/MF A01 CSCL 11/10

Experimental studies showed the yield strength in tension, compression, and shear in the rubbery and the glassy states increased with increasing hydrostatic pressure. Moreover, the Young's modulus also increased with pressure and the amount of the increase across the glass transition temperature (T sub g) at a given pressure can be as large as three orders of magnitude in case of elastomers. An extension of Gibbs-Dimarzio theory is proposed to account for the effect of applied stress on the glass transition temperature of glass forming polymers. When a simple stress, such as tensile, compressive or shear stress, is applied to a polymer, the T sub g will decrease, compared to the polymer without applied stress. A glass forming polymer in the vicinity of the transition would behave differently than what than what is predicted by rubber elasticity. The Young's modulus increases with increasing pressure range but the increase is rather small at very high pressure range. GRA

The properties of electrically conducting, semiconducting and semiinsulating polymers were surveyed and their conduction mechanism, mechanical properties, and suitability for spacebased use evaluated. Correlations between molecular structure, conductivity, and mechanical properties were drawn, and a comprehensive

model of electrical conductivity in organic polymers was formulated. Although the most widely studied electrically conducting polymers are not robust enough for most space-based uses, several commercial materials, including pyrolyzed Kapton and polyvinyl carbazole, appear to have the necessary combination of electrical, thermal, and mechanical properties. The main obstacle to the selection of new or modified materials for spacecraft use is the lack of strength, thermal stability, and radiation resistance--not their conductivity. Several synthesis procedures are identified that would raise the value of these properties to acceptable levels for materials that have the required electrical properties. The wide range of data reported in the literature can be reconciled by a theory of conductivity in which the limiting feature is the rate at which electrons are transferred between localized charges states. Some of the new polymers identified by this model have been prepared. They possess relatively high electrical conductivities and, unlike the majority of electrically conducting polymers, are processable in organic solvents. GRA

Measurements of dielectric properties have been used to monitor chemical reactions in organic materials for more than fifty years. This review addresses the application of dielectric measurements to thermosetting polymers including basic dielectric properties, the methods used to measure these properties, key experimental artifacts that must be understood by the investigator, the physical origin of those artifacts, and a survey of the current published literature with emphasis on the correlations between dielectric properties and other physical properties of the material. DEVELOPMENT OF A SANDED EXPANSIVE SALT GROUT FOR REPOSITORY SEALING APPLICATION Final Report
A. D. Buck, J. A. Boa, Jr., and D. M. Walley Aug. 1985 38 p
(AD-A160431; WES/MP/SL-85-11) Avail: NTIS HC A03/MF A01 CSCL 18/7

A sanded version of the basic BCT 1-F expansive salt grout was developed by the US Army Engineer Waterways Experiment Station in early 1983 for use in a test by Terra Tek in the Fall of 1983 in Salt Lake City. This grout is known as TT83. Initial laboratory tests showed this mixture had adequate workability, impermeability, strength, and positive volume change. There were problems with flow when this material was batched for the Terra Tek test. Later investigation indicated this was probably due to use of different equipment with lower mixing capacity. Specimens made from this grout show over 0.1 percent expansion at an age between 56 and 90 days and about 0.3 to 0.4 at 1 year; expansion testing is being continued at 6-month intervals. It was concluded that this mixture is probably satisfactory for use in repository sealing applications in a salt rock horizon. GRA

THERMAL STABILITY OF CERTAIN HYDRATED PHASES IN SYSTEMS MADE USING PORTLAND CEMENT Final Report
A. D. Buck, J. P. Burkes, and T. S. Poole Aug. 1985 79 p
(Contract DE-AI97-81ET46633)
(AD-A160443; WES/MP/SL-85-7) Avail: NTIS HC A05/MF A01 CSCL 11/2

As part of the study of hydraulic-cement system for use in possible underground isolation of nuclear wastes, this study was made to determine the temperature stability of ettringite and chloroaluminate. Either or both of these phases may be expected in a hydraulic cement system depending on the presence of salt. (NaCl). The study of ettringite was made using 15 mixtures that contained portland cement, plaster, 2 levels of water, and in some mixtures, 1 of 6 pozzolans (3 fly ashes, 1 slag, a silica fume, a natural pozzolan), plus a 16th mixture with anhydrous sodium sulfate replacing plaster ($CaSO_4 \cdot 1/2H_2O$). Specimens were made and stored at 23, 50, and 75 C or 23, 75, and 100 C (all four temperatures in one case) for periodic examination by X-ray diffraction for phase composition and ettringite stability, and testing for compressive strength and restrained expansion. A more limited study of the stability of chloroaluminate was made along the same lines using fewer mixtures, salt instead of plaster, and higher temperatures plus some pressure. It was found that while some ettringette was decomposed at 75 C, depending on the composition of the mixture, all ettringite was undetectable by X-ray diffraction at 100 C, usually within a few days. The evidence indicates that the ettringite became amorphous and no significant test phases formed in its place. Since there was no corresponding loss in strength or reduction in volume, this loss of ettringite crystallinity was considered to be damaging. Based on much more limited data, chloroaluminate was found to decompose between 130 C at 25 psi and 170 C at 100 psi; no significant phases replaced it. GRA

CHEMICAL MODIFICATION OF POLY(ETHYLENE IMINE) FOR POLYMERIC ELECTROLYTE
C. K. Chiang, G. T. Davis, C. A. Harding, and T. Takahashi 1 Oct. 1985 13 p
(Contract N00014-85-F-0022)
(AD-A160482; TR-4) Avail: NTIS HC A02/MF A01 CSCL 07/3

Linear PEI has been chemically modified in an attempt to prevent formation of a crystalline complex without altering its ability to dissolve salts and conduct ions. Three main systems were investigated: (1) poly(N-acetylethylene imine), (2) partially quaternized PEI with ethyl or butyl groups, and (3) PEI cross linked with diepoxyoctane. Dissolution of salt was followed by X-ray diffraction on the mixtures and changes in T sub g as determined by DSC. In all cases, the crystallinity was destroyed but conductivity of salt containing polymer was not improved. However, lightly cross linked PEI exhibits much improved mechanical properties and the incorporation of .05 mole NaI/mole of monomer yields a conductivity of .00005 S/cm at 100 C. Author (GRA)

FRACTO-EMISSION FROM POLYMERS Annual Technical Report, Jun. 1984 - Jun. 1985
J. T. Dickinson 15 Oct. 1985 125 p
(Contract N00014-80-C-0213)
(AD-A160510) Avail: NTIS HC A06/MF A01 CSCL 07/4

Crack propagation through an insulating material or at an interface produces regions of high electronic and chemical activity on the freshly created surfaces. This activity causes the emission of particles, i.e., electrons, ions, and neutral species, as well as photons, from the surfaces both during and after crack propagation. This emission is called fracto-emission (FE), and in many ways serves as a probe of the electronic and chemical activity of the fracture surfaces. In this report we present our results on: the fracto-emission from model propellents with a variety of formulations, the fracto-emission from a metal-polymer interface with and without an externally applied electric field, the photon and radiowave emission from peeling pressure sensitive adhesives, the detection of atom and molecular emission (neutral charge) emitted from the fracture of inorganic single crystals, and a study of the effect of electron bombardment of single fibers of a polymer, kevlar-49. In addition, we discuss briefly the work in progress in several areas related to the above projects: the fracto-emission mechanisms from single crystal inorganics, the neutral emission from both polymers and inorganics, the fracto-emission from explosive crystals, a number of interfacial failure studies (including the fracture of particulate-filled binders), and further work in the area of radiation induced fracture. Poly(organophosphazenes) have been synthesized with alkyl-ether-alkoxy groups attached to the phosphorus atoms of the skeleton. These species are water-stable and either water-soluble or hydrophilic polymers. Specific members of this series form complexes with metal salts, which are excellent solid electrolyte materials. Mixed substituent polymers with hydrophobic trifluoroethoxy and alkyl-ether alkoxy side groups have also been prepared and these are of interest as membranes and biomedical materials. Author (GRA)

CHARACTERIZATION OF FOUR CLASS H HIGH SULFATE-RESISTANT PORTLAND CEMENTS Final Report
A. D. Buck and R. E. Reinhold Sep. 1985 15 p
(Contract DE-AI97-81ET-46633)
(AD-A160551; WES/MP/SL-85-9) Avail: NTIS HC A02/MF A01 CSCL 11/2

As part of the materials selection process for underground repository sealings of nuclear wastes, all available Class H high sulfate-resistant (HSR) portland cements that were commercially available in the United States in 1981 were obtained for testing and evaluation. Four such cements were found. The Class H designation is that used by the American Petroleum Institute; the HSR type is similar to a Type V portland cement as described in ASTM C 150 in that it is intended to impart high sulfate resistance to the cement by the absence or near absence of calculated tricalcium aluminate. Each cement was characterized by a combination of chemical-physical testing and X-ray diffraction examination; it was concluded that all were generally similar and could be interchanged if such a need arose. GRA

DEVELOPMENT OF A SANDED NONSALT EXPANSIVE GROUT FOR REPOSITORY SEALING APPLICATION Final Report
A. D. Buck Aug. 1985 28 p
(Contract DE-AI97-81ET-46633)
(AD-A160594; WES/MP/SL-85-6) Avail: NTIS HC A03/MF A01 CSCL 11/2

A sanded version of expansive BCT 1-FF nonsalt grout was developed for use in the 1984 Terra Tek test in Salt Lake City, Utah. For that reason this grout is also known as TT84. Ability to maintain workability (flow) over a 2-hr time period was required in addition to adequate strength, adequate expansion, and low permeability of the hardened material. Laboratory testing also included sealing and exposure to elevated temperature as variables for expansion testing; permeability testing of a combined grout-anhydrite specimen to evaluate this contact surface was also done. Since the test specimen did not perform as well as expected in the Terra Tek test, a fragment of that grout was also examined in the laboratory. All test data generated at WES were satisfactory for this grout. Concern was raised about whether in field use the compressed wall rock will elastically deform so as to accommodate slight contraction of the expansion grout mixture that will probably occur due to cooling after the rise in temperature due to heat of hydration or shrinkage due to drying or both in an actual field installation. It was recommended that periodic monitoring for expansion be continued and should be started to follow changes, if any, in phase composition and microstructure of the grout with time. GRA

CHARACTERIZATION OF SEVERAL PLASTERS AND ONE RETARDER FOR REPOSITORY SEALING MIXTURES Final Report
A. D. Buck, J. P. Burkes, and R. E. Reinhold Sep. 1985 29 p
(Contract DE-AI97-81ET-46633)
(AD-A160595; WES/MP/SL-85-10) Avail: NTIS HC A03/MF A01 CSCL 18/7

Samples of plasters (i.e., calcium sulfate hemihydrate, $CaSO_4 \cdot 1/2H_2O$) from six sources and one plaster retarder from a different source were obtained and characterized by a combination of chemical and physical testing and by petrographic examination. The petrographic examination included X-ray diffraction, optical microscopy, differential thermal analysis, and scanning electron microscopy procedures. The intent of this work was twofold. One purpose was to determine if plaster per se could be used as an ingredient for cementitious mixtures intended for repository sealing applications, Previous experience had been with use of a proprietary admixture that contained plaster. The second purpose was to determine one or more methods of distinguishing between the alpha and beta forms of calcium sulfate hemihydrate. GRA

SAXS (SMALL ANGLE X-RAY SCATTERING) STUDY OF MICELLE FORMATION IN MIXTURES OF BUTADIENE HOMOPOLYMER AND AND STYRENE-BUTADIENE BLOCK COPOLYMER. PART 2: EFFECTS OF BLOCK LENGTHS
D. Rigby and R. J. Roe 1 Nov. 1985 41 p
(Contract N00014-85-K-0245)
(AD-A160656; TR-2) Avail: NTIS HC A03/MF A01 CSCL 07/4

The small-angle X-ray scattering technique is utilized to determine the characteristics of micelles formed in the mixtures containing a low molecular weight polybutadiene and a styrene-butadiene diblock copolymer. Three different block copolymers of about the same overall molecular weight but with differing lengths of the two blocks are utilized. The observed scattering curve is fitted with a calculated one based on a model of polydisperse micelles interacting with each other according to the Percus-Yevick hard-sphere fluid approximation. The following quantities characterizing the structure of the micelle are evaluated as a function of temperature and copolymer concentration: the average radius of the core, the polydispersity of the core radius, the apparent hard-sphere radius of interaction, the critical micelle concentration, the degree of swelling of the core, and the number density of the micelles. The critical micelle concentration decreases as the proportion of styrene in the copolymer increases. The size of the micelles of a given copolymer remains independent of concentration but shows a moderate variation with temperature, especially immediately before the final dissolution temperature. GRA

THE EFFECT OF BARRIER COATINGS ON THE CURE RATE AND FLUID RESISTANCE OF POLYSULPHIDE SEALANTS
J. Day Oct. 1984 25 p
(AD-A160728; RAE-TM-MAT/STR-1045; DRIC-BR-94620, Avail: NTIS HC A02/MF A01 CSCL 11/3

Two commercial barrier coating materials based on polyurethane and nitrile (acrylonitrile-butadiene copolymer) were used in conjunction with two of the most commonly used integral fuel tank polysulphide sealants (catalysed with either dichromate or lead dioxide). The rate and degree of cure were only slightly reduced when either barrier coating was applied. Neither coating appeared to offer any improvement in fuel resistance but significant improvements were noted in the resistance of barrier coated sealants to the ingress of water. After 44 days at 40 C water uptake of dichromate cured sealant was reduced form 1.26% to 6% by barrier coating with polyurethane. A similar effect was noted with the lead dioxide cured sealant although not to the same degree since this material is inherently more resistant to water than the dichromate cured sealant. There is some doubt about

the long term performance of the polyurethane barrier coating as samples appeared to embrittle on ageing. Author (GRA)

DEUTERATED POLYMERS: CHEMICAL AND PHYSICAL PROPERTIES AND FUTURE PROSPECTS Interim Report, Jan. - May 1985
J. E. Campana and D. N. Heller 16 Oct. 1985 41 p
(AD-A160762; AD-E401375; NRL-8922) Avail: NTIS HC A03/MF A01 CSCL 11/9

In this report the benefits derived from new materials based on fully deuterated polymers are assessed; the chemical and physical properties of deuterated polymers are reviewed exhaustively. The new properties of the deuterated polymers, according to the scientific literature, are identified and used to stimulate the production of new devices, technologies, products, and materials for special applications. The literature search conducted: identifies each area of science in which deuterated polymers have been used, identifies the purpose and results of such work, and abstracts pertinent data on chemical and physical properties from the studies reviewed. Numerous tables compare the measured properties of a variety of polymers studied, and their deuterated and partially deuterated similarities are presented. Polymer properties related to optical fibers, pyrolytic and oxidative stability, structure, and neutron stopping power are discussed. The goals of this review are to highlight the reported differences in properties between deuterated and undeuterated polymers. In some cases, the potential benefits of these differences will be clear; and indeed, some related work has been carried out with specific applications in mind. Generally, it is expected that the data will serve to suggest further development, or to provoke imaginative responses to existing materials needs. GRA

COMMENTARY ON US ARMY STANDARD TEST METHOD FOR FLEXURAL STRENGTH OF HIGH PERFORMANCE CERAMICS AT AMBIENT TEMPERATURE Final Report
G. D. Quinn, F. I. Baratta, and J. A. Conway Aug. 1985 20 p
(AD-A160873; AMMRC-TR-85-21) Avail: NTIS HC A02/MF A01 CSCL 14/2

The Army recognizes the potential applicability of the new ceramics to such systems as heat engines and missile radomes. One of the major obstacles to the use of ceramic materials as structural entities, devices, or component parts of military end items has been a definite lack of design data. The reliability of design data for ceramics is generally conceded to be of relatively low order as compared with such materials as metals and plastics. Part of this problem can be traced to the lack of standardization of test methods for high performance ceramics. This document was developed as a standard test method which will reduce experimental error and will greatly enhance the reproducibility and consistency of strength data for Army systems. The standard is intended for, but not limited to, usage wtih monolithic ceramics such as alumina, silicon nitride, and silicon carbide. Th. value of flexural data for design is discussed in this report. Background information and considerations that led to the standard are presented. GRA

EFFECTS OF ARSENIC DOPING ON THE SOLIDIFICATION DYNAMICS OF PULSED LASER MELTED SILICON
M. O. Thompson, P. S. Peercy, and J. Y. Tsao 1985 7 p refs Presented at the Materials Research Society Fall Meeting, Boston, Mass., 25 Nov. 1985
(Contract DE-AC04-76DP-00789)
(DE85-006107; SAND-85-0069C; CONF-851120-1) Avail: NTIS HC A02/MF A01

The effects of arsenic doping on the solidification dynamics during pulsed melting of silicon have been studied using the transient conductance technique. At As concentrations below 1 at. %, the incorporation of As into the Si lattice results in negligible differences in the solidification dynamics. Between 2 and 7 at. % As, however, the interface velocity is dramatically modified as the liquid-solid interface crosses the As containing region. These velocity changes are consistent with a reduced melting temperature for Si-As alloys. For concentrations of 11 at. % As, the depression in the melting temperature is sufficient to allow the surface to solidify while considerable melt remains buried within the sample. At 16 at. %, the melting temperature is drastically reduced and internal nucleation of melt occurs prior to normal surface melting. DOE

DUAL MECHANISM BIFUNCTIONAL POLYMERS FOR THE COMPLEXATION OF LANTHANIDES AND ACTINIDES
S. D. Alexandratos, D. R. Quillen, and W. J. McDowell 1985 20 p Presented at the 4th Symposium on Separation Science and Technology for Energy Applications, Knoxville, Tenn., 20 Oct. 1985 Prepared in cooperation with ORNL, Tenn.
(Contracts DE-AS05-83ER-13113; DE-AC05-84OR-21400)
(DE86-000094; CONF-851011-1) Avail: NTIS HC A02/MF A01

Phosphinic acid ion exchange/redox resins are synthesized by the reaction between polystyrene beads and phosphorus trichloride followed by base hydrolysis. The reaction requires a temperature of 73(0)C for full functionalization to occur. The effect of lower functionalization temperatures on resin acid capacity was determined and the concomitant effect on ion exchange investigated. The acid capacity was found to vary from 1.09 mequiv/g to 4.79 mequiv/g in the functionalization temperature range studied (15(0)C to 73(0)C). The percent resin sites loaded with zinc ions is independent of the actual capacity but the time to attain that percent loading increases from 5 minutes to 60 minutes as the absolute amount of zinc loaded increases. The extracting ability of the phosphinic acid resin for europium, thorium, uranium, americium, and plutonium was examined as a function of acid concentration from acid nitrate solutions both at varying and constant ionic strength. The phosphinic resins show better extraction for these ions than the sulfonic resins, especially from high acid solution (4M HNO3) due to the superior coordination ability of the phosphoryl oxygen. They also show a much higher selectivity for the ions tested over sodium. For example, under conditions where sulfonic resins absorb 53% of the plutonium in solution, the phosphinic acid resins absorb 99%. DOE

(Contract DE-AC05-84OR-21400)
(DE86-001365; ORNL/TM-9673) Avail: NTIS HC A08/MF A01

A five-year project plan was developed with extensive input from private industry. The objective of the project is to develop the industrial technology base required for reliable ceramics for application in advanced automotive heat engines. The project approach includes determining the mechanisms controlling reliability, improving processes for fabricating existing ceramics, developing new materials with increased reliability, and testing these materials in simulated engine environments to confirm reliability. Although this is a generic materials project, the focus is on structural ceramics for advanced gas turbine and diesel engines, ceramic bearings and attachments, and ceramic coatings for thermal barrier and wear applications in these engines. VORTEX SHEDDING FROM SOLID ROCKET MOTOR PROPELLANT INHIBITORS Ph.D. Thesis
Ping-Huei Shu 1985 85 p
Avail: Univ. Microfilms Order No. DA8518413

A mathematical model is presented for investigating the vortex shedding caused by the protrusion of inhibitors into the flow field of a solid rocket motor (SRM). For the model, the time-dependent Navier-Stokes equations are solved with the assumption of incompressible, two-dimensional flow using a finite difference technique. For laminar flow, explicit solutions are obtained using a vorticity-transport equation in place of the Navier-Stokes equations. The solutions are obtained from primitive equations using a semi-implicit, pressure-correction method. To verify the theoretical results, cold flow tests are conducted to determine experimentally the vortex shedding frequency under both laminar and turbulent flow conditions. For both laminar and turbulent flow models, the vortex shedding frequencies were determined using a stroboscope and yarn tufts fastened to one inhibitor. Upstream conditions were measured by hot wire and hot-film anemometers for laminar and turbulent low, respectively. Author

CRITICAL ANALYSIS OF NITRAMINE DECOMPOSITION DATA: ACTIVATION ENERGIES AND FREQUENCY FACTORS FOR HMX AND RDX DECOMPOSITION Final Technical Report
M. A. Schroeder Sep. 1985 132 p
(DA Proj. 1L1-61102-AH-43)
(AD-A160543; BRL-TR-2673) Avail: NTIS HC A07/MF A01 CSCL 19/1

There is currently considerable interest in the use of nitramine oxidizers in gun and rocket propellants due to their desirable properties, such as absence of noxious combustion products, high specific impulse and impetus, and thermal stability. The most commonly used nitramine oxidizers are RDX (also known by such names as hexogen or cyclonite) and HMX. (Octogen). A literature review is presented, on kinetic parameters for thermal decomposition of HMX and RDX in the homogeneous vapor, liquid, and dissolved states. The decomposition apparently fits first-order kinetics, and suggested values for Arrhenius parameters for HMX and RDX decomposition in the gaseous and liquid phases, and for decomposition of RDX in solution in TNT are given. The possible importance of autocatalysis is pointed out as are some possible complications that may be encountered in interpreting, extending or extrapolating kinetic data for these compounds from measurements carried out below their melting points to the higher temperatures and pressures characteristic of combustion. The mechanistic implications of the activation energies and frequency factors are discussed. GRA

THERMOCHEMICAL MODEL CONVERSION AND USAGE IN ENERGETIC MATERIALS APPLICATIONS
E. Powell and R. B. Boggs 30 Sep. 1985 31 p
(AD-A160651; NRL-MR-5681) Avail: NTIS HC A03/MF A01 CSCL 09/2

The software described in this document is an adaptation of the coded model of propellant combustion developed at Naval Weapon Center (NWC) China Lake. The program is known as the Propellant Evaluation Program. (PEP). The PEP simulation is a Fortran implementation of an equilibrium model for solid fuel combustion under the processes of constant pressure, adiabatic combustion and isentropic, adiabatic expansion. This code was converted for usage on a Prime 9955 minicomputer system from an original copy of version 11978 from NWC. The CRL adaptation does not presently include all of the original I/O capabilities, but rather is structured toward the most simple and direct approach to input setup and execution. At present all I/O is terminal oriented with individual files available for lineprinter or hardcopy. The conversion has been made from Univac 1108 FORTRAN IV to F77. Notable steps in the conversion are described in Appendix 1.

The thermochemical model is useful in calculations of a variety of high-temperature thermodynamic properties and performance levels for solid fuel propellants. It has been employed in various flare development programs as well in its original application of solid fuel motor characterization. The program will handle a maximum of twelve chemical elements in the initial conditions and track up to two hundred combustion products in the end state. GRA

BINDER STUDY FOR HMX/TATB EXPLOSIVES
J. A. Sanchez Sep. 1985 5 p
(Contract W-7405-eng-36)
(DE86-001235; LA-10437-MS) Avail: NTIS HC A02/MF A01

Comparisons were made on Estane, Kraton G, and Kraton G with HyVac Oil for sensitivity and performance in plastic-bonded HMX/TATB formulations. Data obtained on sensitivity, performance, and processability suggest that Estane is superior, so it will be used in further studies. The goal of this study is to develop a relatively insensitive high explosive with a sensitivity between that of RX-26-AF and of PBX 9502. DOE

DOE EXPLOSIVE SAFETY MANUAL, REVISION 2
Aug. 1985 95 p
(DE86-001154; DOE/EV-06194/3-Rev-2) Avail: NTIS HC A05/MF A01

This manual is applicable to all DOE facilities engaged in operations involving the development, manufacturing, handling, storage, transportation (on-site), processing, or testing of explosives. Assemblies containing explosives are also covered. It contains guidelines and standards for these operations in order to safeguard personnel and to prevent property damage. Criteria established by this manual are specific to high explosives but also apply to propellants and pyrotechnics when these materials can undergo explosive reactions. The standards of this manual deal with the operations involving explosives and the safe management of such operations. Design criteria for facilities used in conjunction with explosives operations are addressed only indirectly. Design criteria for explosives facilities are contained in DOE 6430.1, General Design Criteria Manual. It is not intended that existing physical facilities be changed arbitrarily to comply with this manual's provisions, except as required by law. The standards are presented as either mandatory or advisory. Mandatory standards, denoted by the words shall, must, or will, are requirements that must be followed unless written authority for deviation is granted as an exemption by the DOE. Advisory standards denoted by should are standards that may be deviated from with a waiver granted by facility management. DOE

COLLOCATION METHOD FOR STATIC AND DYNAMIC ANALYSIS OF SHELLS OF REVOLUTION c39
Takashi Mikami and Jin Yoshimura *In its* Memoirs of the Faculty of Engineering, Hokkaido Univ., Vol. 16, No. 4(No. 73) Dec. 1985 p 317-328 refs (For primary document see N86-18575 09-31)
Avail: NTIS HC A07/MF A01

The static and dynamic analysis of shells of revolution using the collocation method is described. The proposed method in which the collocation points are taken at the roots of orthogonal polynomial is used to descretize the space-variable. The versatility and accuracy are illustrated through several numerical examples. The method appears to be easy to formulate and simple to use. Author

PREPARATION OF MICA GLASS-CERAMICS BY CRYSTALLIZATION OF FLUORPHLOGOPITE-FLUORMUSCOVITE GLASS c27
Kohei Kodaira, Hiroaki Fukuda (Nippon Mining Co. Ltd., Japan), Shiro Shimada, Toru Matsushita, and Atsumu Tsunashima (Akita Univ., Japan) *In its* Memoirs of the Faculty of Engineering, Hokkaido Univ., Vol. 16, No. 4(No. 73) Dec. 1985 p 329-335 refs (For primary document see N86-18575 09-31)
Avail: NTIS HC A07/MF A01

Transparent and clear glasses were prepared from fluorphlogopite-fluormuscovite system mixtures. Mica crystals were precipitated in the glass by later heat treatment. The mica crystals were identified as fluorphogopite by X-ray powder diffraction patterns. An interlocking microstructure of mica was observed at above 800 C. The density of crystallized glass increased with the increasing heat treatment temperatures. The density crystallized glass increased with the increasing heat treatment temperatures. The density attained a maximum at about 900 C. Author

THEORY FOR DYNAMIC COMPACTION OF WET POROUS SOLIDS
D. S. Drumheller Aug. 1985 41 p
(Contract DE-AC04-76DP-00789)
(DE85-017596; SAND-85-1128) Avail: NTIS HC A03/MF A01

Partially saturated porous media exhibit complex behavior including plastic distortion, irreversible crushing of pores, and dilatancy. Pressure produced by compression of the pore fluid has a strong influence on these phenomena and greatly alters the response observed in the wet solid from that observed in the dry solid. These phenomena are described within the framework of a theory for immiscible mixtures. It shows how a material representation originally derived for the hydrostatic compaction of a dry solid can be generalized to wet solids subjected to both distortional and volumetric deformation. Results of stress wave calculations are compared to data obtained from a field test in which high explosive was detonated in a formation of partially saturated ashfall tuff. DOE

ULTRAVIOLET DISINFECTION OF WATER FOR SMALL WATER SUPPLIES
D. A. Carlson, R. W. Seabloom, F. B. DeWalle, T. F. Wetzler, and J. Engeset Jul. 1985 127 p
(PB85-239960; EPA-600/1-85-092) Avail: NTIS HC A07/MF A01 CSCL 13B

In the study ultraviolet radiation was considered as an alternative means of disinfection of small drinking water supplies. A major impetus for the study was the large increase in waterborne disease episodes in the United States whose etiologic agent, Giardia lamblia, was found to be highly resistant to conventional chlorination. While the germicidal effect of sunlight has long been known, it has been found that artificial UV radiation with a wavelength of 253.7 nm, can be produced by low pressure mercury vapor lamps. The inactivation of microorganisms by UV radiation is based upon photochemical reactions in DNA which result in errors in the coding system. Inactivation of microorganisms due to exposure to UV is proportional to the intensity multiplied by the time of exposure.

PROPAGATION OF ELECTROMAGNETIC WAVES IN TWO DIMENSIONALLY PERIODIC MEDIA Ph.D. Thesis
Tian-Lin Dong 1985 103 p
Avail: Univ. Microfilms Order No. DA8515847

The propagation of electromagnetic waves in two dimensionally periodic structure is systematically investigated, to provide the basic theory for two dimensionally modulated dielectric waveguide. A canonical two dimensionally periodic medium of infinite extent, whose dielectic constant varies sinusoidally in two orthogonal directions, is first examined. The charact solutions are represented exactly by a double Fourier series which is known as the Floquet solution. The harmonic amplitudes of the Floquet solution are determined by a five-term recurrence relation in the vector form, properly taking into account the hybrid-mode nature of the propagation problem. The five-term recurrence relation is then treated by different approaches so that clear physical pictures and practical numerical methods can be obtained. The characteristic solutions for two dimensionally periodic medium are then applied to the boundary-value problem of multi-layer dielectric waveguides containing a finite layer of periodic medium. As an example, the guidance characteristics are then carried out. Besides the canonical medium as a model, more general two dimensionally periodic medium are also discussed. Dissert. Abstr.

PLANE WAVE SCATTERING BY THIN LINEAR DIELECTRIC-COATED WIRES AND DIELECTRIC STRIPS: A MOMENT METHOD APPROACH WITH PHYSICAL BASIS FUNCTIONS Ph.D. Thesis
William Joseph Kent 1985 218 p
Avail: Univ. Microfilms Order No. DA8518971

The scattering current induced on two important classes of structures was analyzed using a method first introduced by Richmond. Each structure requires only the oppositely directed wave modes, the number of modes is fixed, and independent of length. Each mode generates a far field which can completely dominate the fields of the other modes in certain angular sectors. For high to moderate (grazing) incidence angles, the fields in the direction of incidence are usually dominated by one of the surface wave modes for any structures over a few wavelengths long. The surface waves are normally slow. The analysis method has several advantages: (1) it can be used to find the currents for certain structures with one large dimension quite rapidly, and (2) each basis function can be interpreted physically and can be pictured as a distinct radiating mode. The impedance matrices for the two cases are reported. Current distributions and far field results are given for plane wave incidence. Dissert. Abstr.

AN INVESTIGATION OF BAND 2 FIELD STRENGTHS: THE NORTHAMPTON EXPERIMENT
G. H. Taylor Jun. 1985 14 p refs
(BBC-RD-1985/6) Avail: BBC, Kingswood Warren, Tadsworth, Surrey, Engl.

Field strength measurements of several transmitters received within a 10 km by 10 km square are reported. A total of some 24,000 measurements were made, each receiving location being characterized by 240 field strength measurements. The work forms part of a series of studies intended to improve the BBC's field strength prediction program and to form a contribution to CCIR Rec. 370 and Rep. 239. The measurements are made at 10 meters and 4 meters above the ground and also with aerials mounted on a car roof. A figure of 11 dB is suggested as the average height gain factor between reception with car roof whip and halo aerials, and two element aerials at 10 meters above ground. Author

DIGITAL AUDIO EDITING
G. W. McNally, P. S. Gaskill, and A. J. Stirling Aug. 1985 29 p refs
(BBC-RD-1985/10) Avail: BBC, Kingswood Warren, Tadsworth, Surrey, Engl.

Contrasting editing methods particularly in broadcasting are reviewed and the requirements of digital audio editing are explored. A hierarchy of editing strategies with varying degrees of sophistication is proposed. The simplest is to cut the tape and use error concealment and electronic crossfading to smooth the splice. In a more advanced option, the concept of separate cut-point and edit-point is introduced, using an auxiliary data track to control a jump over the splice. The top level is a disc-based strategy which gives the user a flexible, nondestructive editing technique with advanced rehearsal facilities not possible with conventional methods. An experimental disc-based editor is developed. The design philosophy and implementation of this editor and a simulation of its performance are described. The man-machine interface, data formatting, systems level design and the software engineering of the project are reported. E.A.K.

FREQUENCY DOMAIN NON-LINEAR SIGNAL PROCESSING APPARATUS AND METHOD FOR DISCRIMINATION AGAINST NON-GAUSSIAN INTERFERENCE Patent
R. F. Dwyer, inventor (to Navy) Issued 16 Jul. 1985 8 p Supersedes AD-D011068
(AD-D011931; US-Patent-4,530,076; US-Patent-Appl-SN-508649; US-Patent-Class-367-135) Avail: US Patent and Trademark Office CSCL 17/1

Apparatus and method for discriminating against non-Gaussian noise. Analog signals from an array of sensors are converted to real and imaginary digital representations and processed such that non-Gaussian noise is separated from signals of interest. The processor uses estimates of Kurtosis and quantiles from either past or adjacent frequency components to construct non-linear elements, which are then used to process remaining signal data to improve the signal-to-noise ratio thereof by removing non-Gaussian noise therefrom. AN ANALYSIS OF BI-DIRECTIONAL USE OF FREQUENCIES FOR SATELLITE COMMUNICATIONS
Wayne A. Whyte, Jr., Edward F. Miller, Thomas Sullivan (ORI, Inc., Landover, Md.), and John E. Miller (ORI, Inc., Landover, Md.) [1986] 19 p refs Prepared for presentation at the 11th Annual Communications Satellite Systems Conference, San Diego, Calif., 16-20 Mar. 1986; sponsored by AIAA
(NASA-TM-87226; E-2894; NAS 1.15:87226) Avail: NTIS HC A02/MF A01 CSCL 17B

The bi-directional use of frequencies allocated for space

communications has the potential to double the orbit/spectrum capacity available. The technical feasibility of reverse band use (RBU) at C-band (4 GHz uplinks and 6 GHz downlinks) is studied. The analysis identifies the constraints under which both forward and reverse band use satellite systems can share the same frequencies with terrestrial, line of sight transmission systems. The results of the analysis show that RBU satellite systems can be similarly sized to forward band use (FBU) satellite systems. In addition, the orbital separation requirements between RBU and FBU satellite systems are examined. The analysis shows that a carrier to interference ratio of 45 dB can be maintianed between RBU and FBU satellites separated by less than 0.5 deg., and that a carrier to interference ratio of 42 dB can be maintained in the antipodal case. Rain scatter propagation analysis shows that RBU and FBU Earth stations require separation distances fo less than 10 km at a rain rate of 13.5 mm/hr escalating to less than 100 km at a rain rate of 178 mm/hr for Earth station antennas in the 3 to 10 m range. COMPUTATION OF THE RADIATION CHARACTERISTICS OF A GENERALIZED PHASED ARRAY
Roberto J. Acosta Jan. 1986 29 p refs
(NASA-TM-87185; E-2836; NAS 1.15:87185) Avail: NTIS HC A03/MF A01 CSCL 20N

With the advent of monolithic microwave integrated circuit (MMIC) technology, the phased array has become a key component in the design of advanced antenna systems. Array-fed antennas are used extensively in today's multiple beam satellite antennas. A computer program based on a very efficient numerical technique for calculating the radiated power (Romberg integration), directivity, and radiation pattern of a phased array is described. The formulation developed is very general, and takes into account arbitrary element polarization, E- and H-plane element pattern, element location, and complex element excitation. For comparison purposes sample cases have been presented. Excellent agreement has been obtained for all cases. Also included are a user guide and a copy of the computer program. Author

A RESOURCE CONFLICT RESOLUTION PROBLEM FORMULATED IN CONTINUOUS TIME
D. P. Gaver, G. Fayolle, and A. Weiss Aug. 1985 32 p
(RR0-1405)
(AD-A159675; NPS55-85-018) Avail: NTIS HC A03/MF A01 CSCL 17/2

In many situations involving data transmission from diverse sources there can be conflict for a limited number of channels or other facilities. Uncoordinated attempts by several sources to use a single facility can result in collision, the destruction of all participants in the collision, meaning the loss of the transmission, and hence the need for re-transmission. An important problem concerns the development of workable procedures for alleviating the conflict and corresponding message delay problems. Often such problems are viewed as occurring in discrete time: slots of equal length occur in temporal succession, and each slot can handle just one packet of data at a time, if two or more packets try to use the same slot simultaneously, a collision occurs that somehow must be resolved. A recent paper analyzed a stack protocol for handling such a situation, but there are many other proposals. This report is concerned with some simple models for a single facility (channel), and for contention or conflict resolution. The models are formulated in a continuous-time manner: messages, or numbers of packets constituting messages, are long, meaning that they occupy many consecutive slots on the average if a single transmission is occurring. THE EFFECTS OF VOCAL VERSUS MANUAL RESPONSE MODALITIES ON MULTI-TASK PERFORMANCE Interim Report
G. R. Griffin and J. D. Mosko Feb. 1985 17 p
(F56-526)
(AD-A159830; NAMRL-1312) Avail: NTIS HC A02/MF A01 CSCL 05/10

The increasing complexity of display and control instrumentation in modern high performance aircraft has the potential to overload the human operator and result in diminished system performance. Interactive voice technology has been proposed as a method to reduce the high workload placed on the pilots of military aircraft. This report presents the results of an experiment designed to evaluate the effects on human performance of vocal versus manual response modalities on single and multiple tasks simulating some conditions of flight. Results indicated a significant increase in performance precision on a psychomotor task when a vocal, rather than a manual response mode was used on the simultaneous performance of multiple tasks. These results suggest that human performance on visually oriented multiple tasks requiring simultaneous execution may be improved if some of the work effort can be performed using a vocal input/output. SPEECH RECOGNITION: ACOUSTIC, PHONETIC AND LEXICAL End of Fiscal Year Report, 1 Oct. 1984 - 30 Sep. 1985
V. W. Zue 1 Oct. 1985 6 p
(Contract N00014-82-K-0727; ARPA Order 4585)
(AD-A160008) Avail: NTIS HC A02/MF A01 CSCL 05/7

Our long-term research goal is the development and implementation of speaker-independent continuous speech recognition systems. It is our conviction that proper utilization of speech-specific knowledge is essential for advanced speech recognition systems. With this in mind, we have continued to make progress on the acquisition of acoustic-phonetic and lexical knowledge. We have completed the development of a continuous digit recognition system. The system was constructed to investigate the utilization of acoustic phonetic knowledge in a speech recognition system. Some of the significant development of this study includes a soft-failure procedure for lexical access, and the discovery of a set of acoustic-phonetic features for verification. We have completed a study of the constraints provided by lexical stress on word recognition. We found that lexical stress information alone can, on the average, reduce the number of word candidates from a large dictionary by more than 80%. In conjunction with this study, we successfully developed a system that automatically determines the stress pattern of a word from the acoustic signal. GRA

MINIMIZING THE NUMBER OF CLUSTERS IN MOBILE PACKET RADIO NETWORKS M.S. Thesis
A. K. Parekh Oct. 1985 86 p
(Contract N00014-84-K-0357; DARPA Order 3045)
(AD-A160127; LIDS-TH-1502) Avail: NTIS HC A05/MF A01 CSCL 17/2

Linked-cluster architectures have been suggested in the literature for organizing the radios of a stationless mobile Packet Radio Network (PRN). Existing algorithms for achieving such architectures do not attempt to minimize the number of clusters and gateway nodes, aims which we claim are essential to the implementation of any multiple access scheme. The problem is formulated on graphs in three different ways, all of which are NP-complete. It is also shown that epsilon-polynomial time algorithms are not likely to exist. A simple centralized heuristic, Greedy is analyzed in terms of its worst case fractional error. It is then argued that no efficient heuristic is likely to be significantly better in terms of worst-case performance. Two distributed linked-cluster algorithms are presented. GRA

THEORETICAL STUDIES AND DATA ANALYSIS OF WAVE PROPAGATION IN RANDOM MEDIA Final Technical Report,

1 Dec. 1983 - 30 Sep. 1985
S. M. Flatte 15 Sep. 1985 150 p
(Contract MDA903-83-C-0515; ARPA Order 4852)
(AD-A160150; LJI-R-85-350) Avail: NTIS HC A07/MF A01 CSCL 12/1

The objective of this work was to develop a general theoretical framework for calculating fluctuations of signals on waves propagated through random media (WPRM) and to apply this framework to sound through the ocean; light through the atmosphere; radio waves through the ionosphere, solar wind, or interstellar plasma; and any other similar case of waves propagating through continuous media. Comparison with real data is an important aspect of the effort. The two most common signals sent on a carrier are the phase and amplitude of a nearly monochromatic wave. If enough bandwidth is available, one can send a pulse, and one can speak of the intensity and arrival time of that pulse. The technical problem is then to explain the statistical behavior of the intensity and arrival time in terms of medium fluctuations, where the medium is described statistically, usually by a power spectrum covering a large dynamic range of scales. ATMOSPHERIC MULTIPATH PROPAGATION OVER A LONG TERRESTRIAL LINE-OF-SIGHT PATH
U. H. W. Lammers and R. A. Marr Apr. 1985 64 p
(DA Proj. 460-0)
(AD-A160392; RADC-TR-85-79) Avail: NTIS HC A04/MF A01 CSCL 17/2

Measurements of atmospheric multipath propagation were conducted over an 87.6-km test path in the New England area. Characteristic of this program are (1) the pathlength and its potential for propagation effects not normally found on shorter commercial communication links and (2) an effort to explore the propagation mechanism through coordinated measurements of meteorological and wave parameters. The height difference of 178.6 m between transmitting and receiving antennas was the lowest available to retain line-of-sight clearance at this pathlength and yet produce maximum interaction with stratified regions of enhanced refractivity gradient. Radiosonde derived refractivity profiles were obtained at several locations along the test path when propagation conditions warranted this. Dual receiving systems measured multiple wavefront angles of arrival and delay differences. A 29-ft antenna, continuously scanning in elevation, provided angular patterns with 0.15 resolution at the operating frequency of 15. GRA

EVALUATION OF THE OCEAN TECHNOLOGY SYSTEM'S MK 1-S WIRELESS SURFACE UNIT, MK 1 DCI TWO DIVER AIR RADIO, MK 1-D-A WIRELESS DIVER UNIT, MK 1-D-H HARD-WIRE DIVER UNIT AND MK 1-D/S UNIT
B. E. Reyle May 1985 53 p
(AD-A160480; NEDU-6-85) Avail: NTIS HC A04/MF A01 CSCL 17/2

The OTS was evaluated for intelligibility, reliability and human engineering. The test subjects possessed various levels of experience with wireless or hardwire communication and SCUBA. The conditions under which the equipment was tested varied. Surface air temperatures ranged from 37 to 85 F; water temperatures from 65 to 80 F; and water depths from 8 feet of seawater (FSW) to greater than 60 FSW. The tests were conducted inside a circular 30 foot deep ascent tower, in shallow open bay water, and finally in an open ocean environment. The equipment was evaluated in areas of both high and low noise levels on the surface as well as in water. The OTS produced an overall intelligibility of 89.24% during manned open water testing using the Modified Rhyme Test (MRT) as the evaluation criteria, with a minimum effective range of 330 yards at 12 FSW and at least 875 yards, although it appears that the range of the MK 1-D-A is somewhat greater. Human engineering aspects of the OTS were found to be more than satisfactory, with no material failures encountered during testing. It is interesting to note that whenever the equipment required minor adjustments, these could be effected by the diver in the water (on the surface) and in most cases in less than 5 minutes. The amount of maintenance required on the OTS was minimal. GRA

ELECTROMAGNETIC MEASUREMENTS OF MULTI-YEAR SEA

ICE USING IMPULSE RADAR
A. Kovacs and R. M. Morey Sep. 1985 33 p
(Contract DE-AI21-83MC-20022)
(AD-A160737; CRREL-85-13) Avail: NTIS HC A03/MF A01 CSCL 17/9

Sounding of multi-year sea ice, using impulse radar operating in the 80- to 500-MHz frequency band, has revealed that the bottom of this ice cannot always be detected. This paper discusses a field program aimed at finding out why this is so, and at determining the electromagnetic (EM) properties of multi-year sea ice. It was found that the bottom of the ice could not be detected when the ice structure had a high brine content. Because of brine's high conductivity, brine volume dominates the loss mechanism in first-year sea ice, and the same was found true for multi-year ice. A two-phase dielectric mixing formula, used by the authors to describe the EM properties of first-year sea ice, was modified to include the effects of the gas rockets found in the multi-year sea ice. This three-phase mixture model was found to estimate the EM properties of the multi-year ice studied over the frequency band of interest. The latter values were determined by: (1) verified sounding to a subsurface target of known depth, where the two-way travel time of the EM wavelet in the ice is measured; (2) cross-borehole transmission, where the transit time of the EM wavelet is measured through a known thickness of sea ice; and (3) a wide-angle or common-depth-point reflection method. Preliminary findings also indicate that a representative value for the apparent bulk dielectric constant of multiyear sea ice over 2 1/2 m thick is 3.5. GRA

EFFECTS OF NOISE AND WORKLOAD ON A COMMUNICATION TASK
D. H. Orrell, II May 1985 81 p
(AD-A160743; AFIT/CI/NR-85-101T) Avail: NTIS HC A05/MF A01 CSCL 17/2

Communication is of vital importance in the cockpit today. It is essential for pilots to be able to understand the messages sent to them. A major requirement of any aircraft voice communication system is the ability to deliver intelligible speech. In a loose sense, intelligibility may be defined as the understanding of spoken words (Webster, 1979). Several language factors affect intelligibility including vocabulary size, word frequency (familiarity) effects, number of response alternatives, number of syllables, phonetic elements and context (Webster, 1972). Other external considerations include equipment or design features and environment (Webster and Allen, 1972). With such a wide range of sources of influence, it is easy to understand the need for a reliable intelligibility test. One such test found to be particularly useful in studying the effects of aircraft noise has been the Modified Ryhme Test (MRT). GRA

EXTREMELY LOW FREQUENCY (ELF) COMMUNICATIONS SYSTEM ECOLOGICAL MONITORING PROGRAM. SUMMARY OF 1984 PROGRESS Technical Report, 1 Jan. - 31 Dec. 1984
J. E. Zapotosky Jul. 1985 66 p
(Contract N00039-84-C-0070)
(AD-A160793; IITRI-E06549-18) Avail: NTIS HC A04/MF A01 CSCL 17/2

A long-term program is being conducted to monitor for possible effects from the operation of the U.S. Navy's ELF Communications System to resident biota and their ecological relationships. Monitoring studies were selected through a peer-reviewed, competitive bidding process in mid-1982; studies were initiated in late summer of that year. Currently, 16 general types of organisms from three major ecosystems in the ELF Communications System are being examined. During 1984, the Program continued and extended those major activities initiated in 1983, consisting of site selection, the characterization of critical study aspects, and, to a lesser degree, the validation of assumptions made in the original proposals. Progress is summarized for the 11 projects that comprise the Program as well as for the support activities of IIT Research Institute. GRA

DEVELOPMENT OF A VIDEO TAPE TO TEST TELE-CONFERENCING CODECS Final Report
23 Aug. 1985 39 p
(Contract DCA100-83-C-0047)
(AD-A160798; NCS-TIB-85-2) Avail: NTIS HC A03/MF A01 CSCL 17/2

This report covers the design and production of a video tape for testing motion codecs. It is part of a program for comparative evaluation of motion codecs used for teleconferencing at 1.544 Mbs. The specific purpose of the tape is to provide pictorial material which may occur during both government and commercial teleconferences and which simultaneously stresses the capabilities of each codec sufficiently so that differences in performance will become apparent. The choice of material must lead to a completely impartial evaluation without favoring any particular algorithm, and must not be constrained by any present limitation of teleconferencing which will not exist in the future. GRA

TEST AND EVALUATION OF TELECONFERENCING VIDEO CODECS TRANSMITTING AT 1.5 MBps Final Report
Aug. 1985 58 p
(Contract DCA100-83-C-0047)
(AD-A160845; NCS-TIB-85-5) Avail: NTIS HC A04/MF A01 CSCL 17/2

This report covers the testing and ranking of motion codecs for teleconferencing operating at 1.544 Mbps. The tests utilized the motion codec test tape previously identified in NCS TIB 85-2 (Development of a Video Tape to Test Teleconferencing Codecs) and follows the methodology previously developed in NCS TIB 85-1 (Development of Methodology to test Video Codecs used in Teleconferencing). Codecs developed by four manufacturers were tested; this included all units which were available as regular products before the end of November 1984. Since the results of these tests are likely to have considerable impact on the manufacturers, extreme care was taken to ensure are absolute impartiality and fairness in the procedure. Manufacturers' representatives actively participated in all testing and provided assurance that the results were representative of the performance capability of their equipment. The subjective evaluation and ranking of the codecs employed all possible safeguards against external influences by test equipments or test arrangements and against any personal prejudice of the evaluators. GRA

COUPLING BETWEEN EDDY CURRENTS AND RIGID BODY ROTATION: ANALYSIS, COMPUTATION, AND EXPERIMENTS
T. Q. Hua and L. R. Turner 1985 5 p Presented at the 5th Conference on the Computation of Electromagnetic Fields, Fort Collins, Colo., 3 Jun. 1985
(Contract W-31-109-eng-38)
(DE85-013877; CONF-850641-3) Avail: NTIS HC A02/MF A01

Computation and experiment show that the coupling between eddy currents and the angular deflections resulting from those eddy currents can reduce electromagnetic effects such as forces, torques, and power dissipation to levels far less severe than would be predicted without regard for the coupling. This paper explores the coupling effects beyond the parameter range that has been explored experimentally, using analytical means and the eddy-

current computer code EDDYNET. The paper also describes upcoming FELIX experiments with cantilevered beams. DOE

DEVELOPMENT OF A SYSTEM TO MEASURE THE RESPONSE TIME OF MICROWAVE SURVEY INSTRUMENTS TO ROTATING RADAR ANTENNA PATTERNS
P. A. Monheiser Jun. 1985 82 p
(PB85-230217; EPA-520/6-85-019) Avail: NTIS
HC A05/MF A01 CSCL 14B

The report describes the development of a system which simulates rotating radar fields in a controlled environment. The measured time variations of the field generated by a real, rotating radar antenna were first recorded using a computer controlled spectrum analyzer. The data acquired were then used to modulate a carrier wave field in the laboratory to simulate the rotating radar far-field. Finally, response of a thermocouple based microwave hazard survey meter to this field was measured. GRA

(PB85-238046; EPA-520/6-85-018) Avail: NTIS
HC A25/MF A01 CSCL 09E

A modeling study was conducted for the purpose of examining RF radiation exposure levels caused by downward pointing radiation from commercial FM and TV broadcast antenna arrays. The Numerical Electromagnetic Code was used for radiation pattern calculations. Manufacturers' data and measurements were used to provide dimensional information for the computer models. Generic types of FM antennas were identified and their radiation characteristics were presented with emphasis of the reconfiguration of array geometries for purposes of reducing downward directed radiation fields. The population super-turnstile VHF TV element was also modeled. Gain curves for various interelement spacings were developed for arrays containing 2 through 16 elements. GRA

OPTICAL ELECTROMAGNETIC RADIATION DETECTOR Patent
W. J. Miceli and J. E. Ludman, inventors (to Air Force) 6 Aug. 1985 6 p Supersedes AD-D010788
(AD-D011929; US-Patent-4,533,829; US-Patent-Appl-SN-511592; US-Patent-Class-250-227) Avail: US Patent and Trademark Office CSCL 09/3

An optical electromagnetic radiation detector is invented having a probe for receiving nearby electromagnetic radiation. The probe includes a loop antenna connected to a pair of transparent electrodes deposited on the end surfaces of an electro-optic Fabry-Perot interferometer. When the loop antenna picks up the presence of electromagnetic radiation, a voltage will be developed across the crystal of the electro-optic Fabry-Perot interferometer thereby changing the optical length of the interferometer. A beam of light from a remote location is transmitted through an optical fiber onto the Fabry-Perot interferometer. The change in optical length of the Fabry-Perot interferometer alters the intensity of the beam of light as its is reflected from the Fabry-Perot interferometer back through the optical fiber to the remote location. A beamsplitter directs this reflected beam of light onto an intensity detector in order to provide an output indicative of the variations in intensity. The variations in intensity are directly related to the strength of the electromagnetic radiation received by the loop antenna. GRA

ELECTRON IRRADIATION OF p-TYPE MERCURY CADMIUM TELLURIDE M.S. Thesis
D. G. Morral Jun. 1985 67 p
(AD-A159737) Avail: NTIS HC A04/MF A01 CSCL 20/12

30 MeV electrons were used to irradiate samples of p-type Hg1-x CdxTe to study radiation induced changes in conductivity versus temperature. Samples were held below 95 K while irradiated with doses between 4 x 10 to the 13th power electrons/sq cm and 6 x 10 to the 15th power electrons/sq cm. Little or no changes in conductivity were detected for the lower dose levels. Conductivity steadily decreased with increasing dose level, showing a 50% decline at 100 K for the maximum dose. The decrease in conductivity was smaller at higher temperatures. Approximately two hour post-irradiation temperature excursions up to 300 K, resulted in a 25% restoration of the conductivity at 100 K. The mobility of the samples, irradiated at the maximum dose level showed a 3 to 6 fold increase, while the majority carrier concentration decreased by a factor of 7 to 10 times the pre-irradiation values. All samples irradiated with dose levels above 1 x 10 to the 15 power electrons/sq cm, converted from p to n-type at 295/K, but remained p-type at 77 K. It was hypothesized that radiation induced donor defect levels in the conduction band were responsible for the reported changes. Author (GRA)

NONLINEAR MATERIALS FOR THE MILLIMETER SPECTRAL REGION Final Report, 1 Feb. 1982 - 28 Feb. 1985
M. B. Klein, B. A. Wechsler, and D. Rytz Jul. 1985 64 p
(Contract N00014-82-C-0226)
(AD-A159834) Avail: NTIS HC A04/MF A01 CSCL 20/3

Nonlinear materials offer great promise for use in devices such as phase shifters, modulators, switches, and frequency multipliers at frequencies above 50 GHz. State-of-the-art phase shifters (using ferrites) and power sources are inefficient at high frequencies. By contrast, the efficiencies for electro-optic phase shifting and harmonic generation increase with frequency, and devices based on these effects offer high-speed, low-loss operation over a wide spectral range. Ferroelectrics are particularly promising for nonlinear and electro-optic applications at millimeter wavelengths, because their large linear polarizability leads to large electro-optic and nonlinear coefficients. The major challenge in developing ferroelectric materials for these applications is reduction of absorption losses. In this work we have evaluated and measured both intrinsic and extrinsic contributions in our samples, and have shown that the intrinsic factors dominate. Perovskites were identified as the most promising class of materials, including BaTiO3, PbTiO3, KNbO3, and KTa1-xNbxO3(KTN). The material we chose to investigate is BaTiO3, with a few mole percent SrTiO3 added to stabilize the high temperature cubic phase. The resulting material, Ba1-xSrxTiO3 or BST, has properties which differ only slightly from BaTiO3. GRA

DIGITAL PHASE-LOCKED LOOP SPEED CONTROL FOR A BRUSHLESS dc mOTOR M.S. Thesis
M. G. Wise Jun. 1985 74 p
(AD-A159977) Avail: NTIS HC A04/MF A01 CSCL 10/2

Speed control of d.c. motors by phase-locked loops (PLL) is becoming increasingly popular. Primary interest has been in employing PLL for constant speed control. This thesis investigates the theory and techniques of digital PLL to speed control of a brushless d.c. motor with a variable speed of operation. Addition of logic controlled count enable/disable to a synchronous up/down counter, used as a phase-frequency detector, is shown to improve the performance of previously proposed PLL control schemes. RECONSTRUCTION OF MULTIDIMENSIONAL SIGNALS FROM ZERO CROSSINGS Ph.D. Thesis
S. R. Curtis Jun. 1985 95 p
(Contract N00014-81-K-0742; Grant NSF ECS-84-07285)
(AD-A160062) Avail: NTIS HC A05/MF A01 CSCL 17/2

This thesis addresses the problem of reconstruction of multidimensional signals from zero crossing or threshold crossing information. The basic theoretical result shows that most two-dimensional, periodic, bandlimited signals are uniquely specified wtih zero crossings or with crossings of an arbitrary threshold. This result also applies to finite length signals and to situations where only a discrete set of zero crossing points are available. Additional results show that signals of higher dimensions and nonperiodic signals are also uniquely specified with zero crossings or threshold crossings. By applying the duality of the Fourier transform in a straight-forward way, it is also shown that finite-length signals are uniquely specified with zero crossings (or sign formation) in the Fourier domain under analogous sets of conditions. A problem distinct from that of uniquely specifying signals with zero crossings is that of developing specific algorithms for recovering signals from zero crossing information once it is known that the signals satisfy the appropriate constraints. Two algorithms for recovering signals from zero crossings or threshold crossings are presented and one is successfully used to recover example images from threshold crossings. The thesis concludes with suggestions for future research including possible applications of these results. GRA

From photoinduced absorption and light induced electron spin resonance, we demonstrate that the dominant photocarriers generated in polythiophene with excitation above the energy gap E sub g are charged bipolarons (spin zero). The observation of bipolarons B superscript 2 + or - rather than polarons P superscript + or - as the dominant photoexcitations demonstrates that the Coulomb contribution ot the bipolaron energy U sub B is sufficeitly small that P superscript + or + P superscrit + or - yields B superscript + or -2. From the analysis of the spectra, we find U sub B E sub g yields 0.12. approx. Author (GRA)

ON THE OPTIMALITY OF DATA PROCESSORS FOR SIGNAL DETECTION OVER A CLASS OF CONTAMINATED NOISES Interim Report, 1 Oct. 1980 - 30 Sep. 1985
D. R. Halverson and G. L. Wise 30 May 1985 7 p Presented at the 2nd Annual Conference, Communication, Control, and Computing, Monticello, Ill., 3-5 Oct. 1984
(Grant AF-AFOSR-0047-81)
(AD-A160213; AFOSR-85-0775TR) Avail: NTIS HC A02/MF A01 CSCL 09/2

We consider the effect induced on the data processor of a signal detection system when the underlying noise distribution functions are varied about their nominal values. We first consider the detection of a time varying deterministic signal in additive noise, and then extend our results to a more general situation in which the signal possesses a random amplitude. Our results characterize a class of contaminants of an arbitrary nominal

distribution over which the data processor can be designed using the nominal distribution, and it is seen, for example, that such a class can contain distribution functions which can differ greatly from the nominal distribution. GRA

The modeling of crosstalk on printed circuit boards is investigated. The emphasis is on simple models for use in CAD/CAM codes. Several simple models are developed. Their predictions are assessed for typical printed circuit board dimensions and interfering signals. The model predictions are compared to those of conventional lumped-circuit iterative models as well as experimental results. Also included are similar results for a ribbon cable. GRA

PROTOTYPING AND SMALL-VOLUME PARTS THROUGH MOSIS (MOS IMPLEMENTATION SYSTEM)
G. Lewicki Nov. 1985 11 p
(Contract MDA903-81-C-0335)
(AD-A160735; ISI/RS-85-160) Avail: NTIS HC A02/MF A01 CSCL 20/12

Since 1980, the Information Sciences Institute of the University of Southern California has been managing DARPA's MOS Implementation System (MOSIS) for their VLSI design research community. This paper describes the interrelated activities carried out by designers, MOSIS, and fabricators to generate custom integrated circuit parts. The various MOSIS-supported technologies are listed, and a plan for MOSIS to develop a quality assurance methodology is discussed. GRA

ELECTROSTATIC UNBALANCES OF TRANSMISSION LINES M.S. Thesis
J. Nowikowski Aug. 1985 117 p
(AD-A160742; AFIT/CI/NR-85-102T) Avail: NTIS HC A06/MF A01 CSCL 10/2

The research done in this thesis is focused on the problem of reducing electrostatic unbalances that are inherent in transmission lines. The solution is threefold and will be presented in that fashion. First, the unbalance can be modified by varying the conductor size. Secondly, an unbalance can be reduced by adding ground wires. Lastly, the unbalances can be changed by rearranging the phase sequence. Author (GRA)

(Contract MDA903-84-K-0374; ARPA Order 5020)
(AD-A160786; Rept-71-521-SA-2) Avail: NTIS HC A06/MF A01 CSCL 20/14

The final report for a 12-month program containing four tasks in two general areas of concern for GaAs device technology. Task 1 was to assemble and evaluate literature and other databases concerning high speed operation as assisted by velocity overshoot or ballistic transport; a bibliography of 232 items appears with this Report. Task 2 involved assessment of the probability of achieving ballistic or other maximized electron speed with various sub-micron geometry GaAs devices, and the report here emphasizes the higher probability of eventual success with vertically-oriented devices, especially HBTs. Task 3 involved literature and other database assessment for EL2 and other extrinsic properties of GaAs; it is noted here that, despite intense study by many, the atomic nature of EL2 is not determined, and that research on the high temperature defect chemistry of GaAs is desirable. Task 4 involved mapping measurements of EL2 and other properties of SI GaAs wafers, and the part of our work carried out in support of DARPA needs is described. GRA

A COMPARATIVE EVALUATION OF THE RELIABILITY IMPROVEMENT IN LINE REPLACEABLE UNITS WARRANTED UNDER THE F-16 RELIABILITY IMPROVEMENT WARRANTY M.S. Thesis
S. J. Lemke Sep. 1985 98 p
(AD-A160830; AFIT/GLM/LSP/85S-44) Avail: NTIS HC A05/MF A01 CSCL 09/3

This thesis examined the effects a reliability improvement warranty (RIW) had on the actual operational reliability of the warranted avionics equipment. To accomplish this, the most comprehensive DOD application of RIW to date, the F-16 RIW, was investigated. This study was designed to answer the question of whether or not a warranted weapons system was significantly more reliable than it would have been without the warranty. Specifically, the observed mean flight hours between failures (MFHBFs) and the observed reliability growths of the warranted F-16 equipment were compared to those of functionally similar non-warranted F-15 equipment. Also, the reliability growth of the F-16 warranted equipment was compared to that of other non-warranted F-16 equipment. The AMSAA Reliability Growth Model was used as a basis for the reliability growth analyses. Comparable life cycle time periods for each aircraft were studied, using AFM 66-1 D056 failure and flight time data. The results of the investigation indicated that, in general, the observed MFHBFs of the F-16 warranted equipment were statistically greater than the MFHBFs of the equivalent F-15 equipment. The same could not be concluded for the reliability growths of the F-16 and equivalent F-15 equipment. However, the reliability growth of the warranted F-16 equipment was found to be statistically greater than the reliability growth of the non-warranted F-16 equipment. Author (GRA)

REACTION PROFILES IN POROUS ELECTRODES Final Report
T. Katan and P. J. Carlen May 1985 80 p
(Contract DE-AC03-76SF-00098)
(DE85-016512; LBL-19727) Avail: NTIS HC A05/MF A01

An experimental program was conducted to ascertain causes of alkaline zinc electrode shape change and to determine the development of reaction profiles within the pores of porous zinc electrodes. Various analog electrochemical cells were operated to isolate and evaluate the individual processes occurring during charge and discharge. It was found that both edge effects and osmosis can be responsible for the shape change phenomenon. DOE

MAGNETICALLY CONFINED KINETIC-ENERGY STORAGE RING: A NEW FUNDAMENTAL ENERGY-STORAGE CONCEPT
J. R. Hull and W. W. Schertz 1985 26 p Presented at the 20th Intersociety Energy Conversion Engineering Conference, Miami Beach, Fla., 18 Aug. 1985
(Contract W-31-109-eng-38)
(DE85-007982; CONF-850808-1) Avail: NTIS HC A03/MF A01

A new, fundamental type of energy storage device which has the potential for low cost diurnal storage of electrical energy is introduced. The magnetically confined kinetic energy storage ring (MCKESR) stores kinetic energy as mass circulated at high velocity around a circular loop. The constraining force necessary to keep the circulating mass (essentially a ring) from flying apart is provided by radial, inwardly directed forces exerted along the parameter of the loop by magnetic fields. The magnets and ring are contained in a tunnel, which may be buried in the ground. Levitational support against gravity is also provided by magnetic fields. Electrical energy insertion or extraction is similar to that for a synchronous motor/generator. Major advantages of the MCKESR concept are that large devices seem feasible and that costs are inversely related to size. The use of superconducting magnets should result in a very high energy recovery efficiency. DOE

DEGRADATION OF BETA" ALUMINA ELECTROLYTES Final Report
L. C. DeJonghe Jul. 1985 117 p
(Contract DE-AC03-76SF-00098)
(DE85-015300; EPRI-EM-4151) Avail: NTIS HC A06/MF A01; also available from Research Reports Center, Box 50490, Palo Alto, Calif. 94303

Increasing electrolyte reliability during cell operation is a major challenge facing developers of beta batteries. Laboratory experiments have shown that subcritical crack growth in beta 2 alumina electrolytes decreases cell durability. However, adding zirconia to beta 2 alumina increases its toughness and eliminates exaggerated grain growth that may lead to early cell failures. DOE

NEW MULTIPLE SHEET RESISTANCE TECHNOLOGY FOR THIN FILM CIRCUITS
D. Norwood 1985 6 p Presented at the International Symposium on Microelectronics, Anaheim, Calif., 11 Nov. 1985
(Contract DE-AC04-76DP-00789)
(DE85-016459; SAND-85-0458C; CONF-851175-1) Avail: NTIS HC A02/MF A01

A process has been developed to obtain thin film circuits having multiple sheet resistances for resistors. With additional levels of photoprocessing, the conductor underlayers of titanium and palladium can be processed into resistors having sheet resistivities of 1 and 10 ohms per square. This technology does not require changes to the standard metallization processes and conventional tantalum-nitride (Ta2N) resistor processing remains the same. The titanium-palladium resistors evaluated in this study are stable, well-behaved resistors having a large power dissipation capability; they can be laser trimmed to close tolerances. However, the higher Temperature Coefficient of Resistance (TRC) does limit their use in some circuit applications. DOE

INVESTIGATION OF Re-X GLASS CERAMIC FOR ACCELERATION INSULATING COLUMNS
A. Faltens and S. Rosenblum May 1985 5 p Presented at the Particle Accelerator Conference, Vancouver, British Columbia, 13 May 1985 Prepared in cooperation with Varian Associates, Inc., Palo Alto, CA.
(Contract DE-AC03-76SF-00098)
(DE86-000598; LBL-19526; CONF-850504-285) Avail: NTIS HC A02/MF A01

In an induction linac the accelerating voltage appears along a voltage-graded vacuum insulator column which is a performance limiting and major cost component. Re-X glass ceramic insulators have the long-sought properties of allowing cast-in gradient electrodes, good breakdown characteristics, and compatibility with high vacuum systems. Re-X is a glass ceramic developed by General Electric for use in the manufacture of electrical apparatus, such as vacuum arc interrupters. We have examined vacuum outgassing behavior and voltage breakdown in vacuum and find excellent performance. The housings are in the shape of tubes with type 430 stainless steel terminations. Due to a matched coefficient of thermal expansion between metal and insulator, no vacuum leaks have resulted from any welding operation. The components should be relatively inexpensive to manufacture in large sizes and appear to be a very attractive accelerator column. We are planning to use a standard GE housing in our MBE-4 induction linac. DOE

MAGNET CABLE MANUFACTURING
J. Royet Jul. 1985 19 p Presented at the Cable Fabrication Workshop, Berkeley, Calif., 27 Aug. 1985
(Contract DE-AC03-76SF-00098)
(DE86-000607; LBL-20129; CONF-8508132-1) Avail: NTIS HC A02/MF A01

The superconducting magnets used in the construction of particle accelerators are mostly built from flat, multistrand cables with rectangular or keystoned cross sections. The superconducting strands are mostly circular but a design of a cable made of preflattened wires was proposed a few years ago under the name

of Berkeley flat; such cable shows some interesting characteristics. Another design consists of a few smaller precabled wires (e.g., 6 around 1). This configuration allows smaller filaments and a better transposition of the current elements. The Superconducting Super Collider project involves the largest amount of superconducting cable ever envisaged for a single machine. Furthermore, the design calls for exceptional accuracy and improved characteristics of the cable. A part of the SSC research and development program is focused on these important questions. In this paper we emphasize the difference between the conventional cabling and wires with superconducting. A new concept for the tooling will be introduced as well as the necessary characteristics of a specialized cabler. DOE

GaP/Al/SUB x/Ga/SUB 1-x/P HETEROJUNCTION SEMICONDUCTOR CONTROLLED RECTIFIER FOR HIGH-TEMPERATURE ELECTRONIC APPLICATIONS
T. E. Zipperian and L. R. Dawson 1985 19 p Presented at the 12. International Symposium on Gallium Arsenide and Related Compounds, Karuizawa, Japan, 23 Sep. 1985
(Contract DE-AC04-76DP-00789)
(DE86-000204; SAND-85-1067C; CONF-8509164-2) Avail: NTIS HC A02/MF A01

Useful, three-terminal, solid-state switching action over the temperature range from 23 to 550(0)C has been demonstrated for mesa-isolated, liquid-phase epitaxial, n(+)n(+)pn(-)p(+), GaP/Al sub 0.35/Ga sub 0.65/P/GaP/GaP/Gap, heterojunction, semiconductor controlled rectifier (HSCR) structures. This is the highest temperature at which solid-sate p-n-p-n switching action has ever been demonstrated in any material system. Some bistable switching was observed to temperature as high as 580(0)C. These results provide evidence that the GaP/AlGaP heterojunction system is an excellent technology for electronic components operated at high temperature. DOE

PHENOMENOLOGY OF ELECTROMAGNETIC COUPLING, PART 2
R. J. King, A. P. Ludwigsen, and K. S. Kunz Aug. 1985 91 p
(Contract W-7405-eng-48)
(DE86-000838; UCID-20215-Pt-2) Avail: NTIS HC A05/MF A01

This report is the second of a planned series which summarize efforts at Lawrence Livermore National Laboratory relating to phenomenology studies of back door coupling from several MHz to 10's of GHz. These studies are pertinent to high altitude EMP (HEMP), enhanced HEMP and microwave coupling. Part 1 dealt with coupling through apertures into large free-standing cavities having, at most, one interior cable. An overview of the effort is given, and a summary of the effects observed in Part 1. The main effort since Part 1 has been devoted to Facilities Development, development of an interior coupling decomposition model and coupling experiments. Projected future effort is discussed. DOE

SYMMETRIC FIN-LINES
Aake Bergquist Oct. 1985 37 p refs In SWEDISH; ENGLISH summary
(FOA-C-30408-E; ISSN-0347-3708) Avail: NTIS HC A03/MF A01; Research Institute of National Defence, Stockholm KR 50

Symmetric fin-lines (of single side and double side design) were analyzed to deduce useful formulas for the most important parameters of these transmission lines. Results of attenuation measurements on fin-lines in the superhigh and extremely high frequency ranges are outlined. Limit wavelength, effective dielectric constant, characteristic impedance, losses in the metal walls, dielectric losses, attenuation factor, the maximum transferable effect, and bandwidth of the lines are discussed. Author (ESA)

OUT-OF-BAND RESPONSE OF REFLECTOR ANTENNAS
D. A. Hill Apr. 1985 76 p Sponsored in part by DNA, Washington, D.C.
(PB85-224476; NBSIR-85/3021) Avail: NTIS HC A05/MF A01 CSCL 09E

The response of reflector antennas to out-of-band frequencies has been analyzed using physical optics. A simple approximate expression has been obtained for the effective aperture, and the expression yields both the receiving pattern and the frequency dependence of the on-axis gain. The theory has been compared with published out-of-band measurements, and the pattern agreement is good, but the measured gain falls below the theory. The discrepancy is caused by mismatch loss has been analyzed theoretically. The basic physical optics model for symmetrical reflectors has been extended to include offset and dual reflectors, reflector surface roughness, and transient excitation. Author (GRA)

COLLISION OF MACH REFLECTIONS WITH A 90 DEG RAMP IN AIR AND CO2
J.-C. Li and I. I. Glass Oct. 1985 90 p refs Sponsored in part by Natural Sciences and Research Council of Canada
(Contract DNA001-83-C-0266; Grant AF-AFOSR-82-0096)
(UTIAS-290; ISSN-0082-5255) Avail: NTIS HC A05/MF A01

The collision of nonstationary oblique-shock-wave Mach-reflections with a perpendicular ramp on a 20 deg.-wedge was investigated interferometrically and numerically. Over 100 experiments were conducted in the UTIAS 10 cm x 18 cm Hypervelocity Shock Tube with three different ramp heights. Single-Mach reflection (SMR) in air, complex-Mach reflection (CMR) in air and double-Mach reflection (DMR) in carbon dioxide were studied at incident shock Mach numbers M sub s of 2.40, 3.94 and 5.77, respectively. After the collision of the Mach stem with the perpendicular ramp, very complex interactions occurred among shock waves, nonstationary rarefaction waves, quasi-steady expansion waves, contact surfaces and boundary layers. These interactions were studied using infinite-fringe interferometric-techniques. The isopycnics were evaluated and are presented and discussed for the various reflection processes. Based on the self-similarity of the shock-wave-diffraction process and the results of three-shock theory, a reasonable treatment of discontinuous surfaces is given and combined with the fluid-in-cell numerical-method to solve the flow fields for the single-Mach reflection case. A comparison of the numerical results with the experimental isopycnics shows fair agreement, especially near the leading edge of the wedge. DOE

EXPERIMENTS FOR THE DETERMINATION OF CONVECTIVE DIFFUSION HEAT/MASS TRANSFER TO BURNER RIG TEST TARGETS COMPARABLE IN SIZE TO JET STREAM DIAMETER
Gilbert J. Santoro and Sueleyman A. Goekoglu (Case Western Reserve Univ., Cleveland, Ohio) 1986 30 p refs Proposed for presentation at the 1986 Winter Annual Meeting of the American Society of Mechanical Engineers, Anaheim, Calif., 30 Nov. - 5 Dec. 1986
(NASA-TM-87196; E-2794; NAS 1.15:87196) Avail: NTIS HC A03/MF A01 CSCL 20D

The application of a recently formulated vapor transport theory to predict deposition rates of corrosive salts from alkali-seeded

combustion gases of a small-capacity, high-velocity, atmospheric-pressure burner rig was hampered by the relatively large dimensions of the cylindrical deposit collector compared to the diameter of the combustion gas stream. The relative dimensions lead to a highly nonadiabatic combustion gas flow around the collector and necessitate two series of experiments. In the first series, mass transfer coefficients are determined by utilizing the naphthalene sublimation technique. The second series of experiments determines the dilution effect on the sodium species concentrations due to the entrainment of ambient air. This second series involves the measurement of the temperature variation along the surface of the collector under steady state conditions. Vapor deposition rates are determined exploiting this information and the results are found to compare favorably with experimentally obtained rates. Author

STUDY OF JOURNAL BEARING DYNAMICS USING 3-DIMENSIONAL MOTION PICTURE GRAPHICS
David E. Brewe and Donald J. Sosoka [Nov. 1985] 8 p Presented at the ASEE Engineering Design Graphics Division Midyear Meeting, West Lafayette, Ind., 24-26 Nov. 1985
(NASA-TM-87205; E-2862; NAS 1.15:87205; USAAVSCOM-TR-86-C-3) Avail: NTIS HC A02/MF A01 CSCL 20D

Computer generated motion pictures of three dimensional graphics are being used to analyze journal bearings under dynamically loaded conditions. The motion pictures simultaneously present the motion of the journal and the pressures predicted within the fluid film of the bearing as they evolve in time. The correct prediction of these fluid film pressures can be complicated by the development of cavitation within the fluid. The numerical model that is used predicts the formation of the cavitation bubble and its growth, downstream movement, and subsequent collapse. A complete physical picture is created in the motion picture as the journal traverses through the entire dynamic cycle. Author

ACTIVE CONTROL OF COMPRESSIBLE FLOWS ON A CURVED SURFACE Final Report
Lucio Maestrello, Paresh Parikh (Vigyan Research Associates, Inc., Hampton, Va.), Alvin Bayliss (Exxon Corporate Research Science Labs.), and Eli Turkel (Tel-Aviv Univ., Israel) Nov. 1985 29 p refs
(Contracts NAS1-17070; NAS1-18107; NAS1-17252)
(NASA-CR-178018; ICASE-85-52; NAS 1.26:178018) Avail: NTIS HC A02/MF A01 CSCL 20D

The effect of localized, time periodic surface heating and cooling over a curved surface is studied. This is a mechanism for the active control of unstable disturbances by phase cancellation and reinforcement. It is shown that the pressure gradient induced by the curvature significantly enhances the effectiveness of this form of active control. In particular, by appropriate choice of phase, active surface heating can completely stabilize and unstable wave. Author

MARCHING ITERATIVE METHODS FOR THE PARABOLIZED AND THIN LAYER NAVIER-STOKES EQUATIONS
Moshe Israeli Dec. 1985 28 p refs
(Contract NAS1-17070)
(NASA-CR-178028; ICASE-85-60; NAS 1.26:178028) Avail: NTIS HC A03/MF A01 CSCL 20D

Downstream marching iterative schemes for the solution of the Parabolized or Thin Layer (PNS or TL) Navier-Stokes equations are described. Modifications of the primitive equation global relaxation sweep procedure result in efficient second-order marching schemes. These schemes take full account of the reduced order of the approximate equations as they behave like the SLOR for a single elliptic equation. The improved smoothing properties permit the introduction of Multi-Grid acceleration. The proposed algorithm is essentially Reynolds number independent and therefore can be applied to the solution of the subsonic Euler equations. The convergence rates are similar to those obtained by the Multi-Grid solution of a single elliptic equation; the storage is also comparable as only the pressure has to be stored on all levels. Extensions to three-dimensional and compressible subsonic flows are discussed. Numerical results are presented. Author

Avail: NTIS HC A15/MF A01

The velocity is first assumed to be known, leaving for later the problem of computing the velocity field itself. A weak form to the equation and a formulation of the approximate solution are discussed. A matrix form of the algebraic equations is presented. A thermohydraulic example is given. Explicit and implicit methods used to solve the nonsteady case are considered including explicit Euler, lumped mass, intermediate approaches, and implicit methods for time integration. Examples in one and two dimensions are presented. Author (ESA)

(Contract DRET-84-014)
Avail: NTIS HC A15/MF A01

Computational methods for unstructured meshes are discussed. A synthesis between finite element, finite difference and finite volume methods is attempted. Synthesis schemes including centered or upwind schemes, Lax-Wendroff or method of lines, and explicit or implicit schemes are considered. Accuracy and efficiency of the schemes are compared with test problems using coarse meshes and simplified geometry: a channel with circular bump and a NACA 0012 aircraft. The upwind first order accurate schemes presented are cost effective and the linearization for the construction of implicit schemes is straightforward. The second order upwind scheme does not need to tune any parameter to obtain the results. Author (ESA)

COMPACT FINITE DIFFERENCE METHODS FOR SOLVING INCOMPRESSIBLE NAVIER-STOKES EQUATIONS AROUND OSCILLATING BODIES
Y. Lecointe and J. Piquet *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Vol. 2 1985 218 p refs (For primary document see N86-18660 09-34)
Avail: NTIS HC A14/MF A01

Unsteady two dimensional problems are solved from the Navier-Stokes equation written in the vorticity-stream function formulation to minimize the storage required. The numerical methods discussed include discretization algorithms for the vorticity equation, unfactorized forms, generation of boundary-fitted coordinates, mapping based on a Poisson equation, and conformal mapping. The numerical results examples include the impulsively started cylinder problem, the free vortex shedding problem, study of superimposed motion of a circular cylinder, impulsively started airfoil, and study of the motions of an airfoil. The symmetric patterns around impulsively started cylinders compare successfully with visualizations. Flow around an aircraft is discussed. To keep acceptable CPU times when simulating turbulent processes, the choice is between zero equation models like the Cebeci-Smith mixing length model, and two equation models like the k-epsilon model. THE CONCEPT OF INFORMATION IN SCIENTIFIC COMPUTING
David Gottlieb, S. Abarbanel, and E. Tadmor *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Vol. 2 1985 37 p refs (For primary document see N86-18660 09-34)
Avail: NTIS HC A14/MF A01

The spectral approximation of discontinuous problems is discussed to show that when the solution is a complicated function the grid point value approximation is not acceptable, and to suggest different ways for the realization of the solution in such cases. The information contained and how to extract it is discussed for the case of a linear hyperbolic operator with variable coefficients and a discontinuous function. A smoothing procedure is outlined and its efficiency is demonstrated. A differential method for extracting information is described. It is shown that the use of digital filters to overcome the Gibbs phenomenon is applicable to this type of problem. Author (ESA)

MEASURED SIMILARITY PROPERTIES OF EDDY VISCOSITY AND MIXING LENGTH IN THREE-DIMENSIONAL TURBULENT STERN FLOWS Final Report
T. T. Huang May 1985 35 p
(ZRO-2301)
(AD-A156644; DTNSRDC-85/038) Avail: NTIS HC A03/MF A01 CSCL 20/4

A comprehensive set of experimental turbulence data is presented for the stern region of simple three dimensional models having 1:1, 2:1, and 3:1 elliptic transverse cross sections. Direct measurements of Reynolds stresses, turbulence kinetic energy, and mean velocity profiles are made by X hot film anemometry. The values of eddy viscosity and mixing length are obtained from he measured Reynolds stresses and the mean velocity gradient. The experimentally determined distributions of eddy viscosity and mixing length in the thick stern boundary layers are found to be smaller than values which have been proposed for thin boundary layers. Because eddy viscosity and mixing length models play an important role in stern boundary layer calculations, a revised empirical mixing length model, which is assumed to be proportional to the square root of the effective turbulence area, is proposed. ROLE OF SMALL COMPUTERS IN TWO-DIMENSIONAL FLOW MODELING
D. M. Gee Oct. 1985 16 p Presented at the American Society of Civil Engineers Hydraulics Division Specialty Conference, Hydraulics and Hydrology in the Small Computer Age, 12-17 Aug. 1985, Orlando, Fla.
(AD-A159666; HEC-TP-106) Avail: NTIS HC A02/MF A01 CSCL 09/2

The computational aspects and computer usage history of numerical simulations of horizontal, free surface, steady or unsteady two-dimensional flow fields are described. The focus is on a particular numerical model (RMA-2) that has been in use and development at the Hydrologic Engineering Center (HEC) and elsewhere for the past decade. RMA-2 solves the complete Reynold's equations for turbulent flow in two dimensions using the finite element method. Terms describing bottom friction, surface wind, and Coriolis forces are included. Details of the governing equations and solution technique are thoroughly documented elsewhere. RMA-2 may be used as a driver for sediment transport and water quality simulations as well as for computing hydrodynamic information only. GRA

DYNAMIC CHARACTERISTICS OF THE 48-INCH WATER TUNNEL DRIVE PUMP
K. Ravindra 26 Aug. 1985 15 p
(Contract N00024-79-C-6043)
(AD-A159904; ARL/PSU/TM-85-149) Avail: NTIS HC A02/MF A01 CSCL 13/11

In this report, the dynamic characteristics of the 48-inch water tunnel drive pump are determined using the theory of unsteady flow around a two-dimensional cascade of airfoils developed by Ohashi (1). This analysis assumes that the axial surge velocity is uniform across the face of the impellar. It is found that the magnitude plot of the dynamic characteristics is similar to that of a simple control lag element whereas the phase plot looks quite different. The solidity of the rotor in the present analysis need not be large as assumed in previous investigations. GRA

DOUBLE WALL ARTERY HEAT PIPE Final Report, Oct. 1981 - Sep. 1983
R. Ponnappan Jun. 1985 127 p
(Contract F33615-81-C-2058)
(AD-A160012; UES-727-TR-83-001; AFWAL-TR-85-2041) Avail: NTIS HC A07/MF A01 CSCL 13/1

The Universal Energy Systems, Inc., is conducting Advanced

Heat Pipe Concepts and Two Phase Flow Heat Transfer Research for the enhancement of the transport capacity of heat pipes for space systems. A new composite wick concept called the Double-Wall artery has been developed for which the design requirements and calculations are discussed here in detail. A proof-of-the-concept copper-water heat pipe prototype unit, 1.2 m long and 22.2 mm diameter (OD) was fabricated and tested successfully. A nominal axial transport capacity of 1600 W m and radial heat flux density of 16 W/sq cm were achieved. This device was simpler to fabricate and had superior performance compared to several other counter-current vapor/liquid flow wick demonstrated 25 W sq cm of radial heat flux with a temperature drop of less than 10 C. Results of steady state thermal performance tests under no tilt, favorable and adverse tilt and liquid overfill/underfill conditions are reported. Condenser cooling methods included bath and evaporative types. Further modifications and improvements are also discussed. GRA

THE ROLE OF EIGENSOLUTIONS IN NONLINEAR INVERSE CAVITY-FLOW-THEORY, REVISION
B. R. Parkin 10 Jun. 1985 67 p
(Contract N00024-79-C-6043)
(AD-A160424; ARL/PSU/TM-85-97) Avail: NTIS HC A04/MF A01 CSCL 20/4

The method of Levi Civita is applied to an isolated fully cavitating body at zero cavitation number and adapted to the solution of the inverse problem in which one prescribes the pressure distribution on the wetted surface and then calculates the shape. The novel feature of this work is the finding that the exact theory admits the existence of a point drag function or eigensolution. While this fact is of no particular importance in the classical direct problem, we already know from the linearized theory that the eigensolution plays an important role. In the present discussion, the basic properties of the exact point-drag solution are explored under the simplest of conditions. In this way, complications which arise from nonzero cavitation numbers, free surface effects, or cascade interactions are avoided. The effects of this simple eigensolution on hydrodynamic forces and cavity shape are discussed. Finally, we give a tentative example of how this eigensolution might be used in the design process. SUBDIVISION FROUDE NUMBER Technical Paper
D. H. Schoellhamer, J. C. Peters, and B. E. Larock Oct. 1985 16 p
(AD-A160486; HEC-TP-110) Avail: NTIS HC A02/MF A01 CSCL 08/8

A Froude number that is applicable to subdivisions of a cross section is developed assuming one-dimensional flow. The subdivision Froude number is shown to be an accurate index of the flow regime in subdivisions of a cross section. An imaginary Froude number in a flood plain indicates that the velocity is increasing with depth and that a one-dimensional flow assumption may be invalid. Mixed flow regimes at a cross section which invalidate assumptions associated with the standard step method can be recognized with the subdivision Froude number. A total of 193 cross section-discharge combinations were tested with a modified version of HEC2; 11 had a mixed flow regime and 36 had at least 1 imaginary Froude number. Author (GRA)

STAGNATION-POINT HEAT TRANSFER FROM JET FLAMES
J. E. Shepherd 1985 18 p Presented at the 1985 ASME/AIChe Heat Transfer Conference, Denver, Colo., 4-7 Aug. 1985 Submitted for publication
(Contract DE-AC04-76DP-00789)
(TI85-011376; SAND-85-2258C) Avail: NTIS HC A02/MF A01

We have experimentally measured the stagnation-point heat transfer rate from hydrogen diffusion flames to a cool (340 K) gauge in adiabatic ceiling. The hydrogen source was an axisymmetric jet and could be diluted with either nitrogen or steam. The total heat flux on the centerline was measured with a Gardon gauge as a function of ceiling height about the source. Height was varied from 10 to 100 source diameters for jets initially 6.4 mm in diameter. The heat transfer rate was studied as a function of diluent type and amount of diluent in the jet. DOE

DEVELOPMENT OF HIGH EFFECTIVENESS DROPLET HEAT EXCHANGERS Final Report
W. J. Thayer, III, K. M. Sekins, and A. P. Bruckner 15 Apr. 1985 274 p
(Contract DE-AC06-81ER-10918)
(DE85-013352; DOE/ER-10918/1) Avail: NTIS HC A12/MF A01

An experimental and analytical investigation has been carried out to assess the feasibility of developing high effectiveness, high temperature droplet heat exchangers and to identify practical applications for this type of direct contact heat exchanger. The droplet heat exchanger (DHX) concept studies uses a counterflowing gas and droplet configuration, uniformly sized droplets or particles, and a uniform dispersion of droplets in gas to achieve high heat exchanger effectiveness. Direct contact between the heat transfer media eliminates the solid heat transfer surfaces that are used in conventional heat exchangers and is expected to make very high temperature heat transfer practical. Low temperature simulation tests and analysis have been used to demonstrate that uniformly sized droplets can be generated over a wide range of fluid properties and operating conditions appropriate for high temperature droplet heat exchanger applications. One- and two-dimensional, two-phase flow and heat transfer computer models have been developed and used to characterize both individual component configurations and overall DHX heat transfer rates and effectiveness. The computer model and test data began to diverge as the operating pressure was increased, indicating a need for more general transport rate correlations and a better understanding of the two-phase flows that govern DHX operation. DOE

LASER INTERFEROMETER MEASUREMENTS OF REFRACTIVE INDEX IN SHOCK-COMPRESSED MATERIALS
J. L. Wise and L. C. Chhabildas 1985 15 p Presented at the American Physical Society Topical Conference on Shock Waves in Condensed Matter, Spokane, Wash., 22 Jul. 1985

(Contract DE-AC04-76DP-00789)
(DE85-015505; SAND-85-0310C; CONF-850736-43) Avail: NTIS HC A02/MF A01

Laser interferometer systems provide a means for probing the refractive index of transparent specimens subjected to dynamic compression. Previous interferometer measurements of optical properties under shock loading are reviewed for polymethyl methacrylate, fused silica, sapphire, nitromethane, and an aqueous solution of zinc chloride; various degrees of departure from Gladstone-Dale behavior are noted for these materials. In addition, a detailed summary of recent optical studies of lithium fluoride (LiF) is provided. Interferometer data from plate-impact experiments verify sustained LiF transparency for Hugoniot stresses to at least 115 GPa, and establish the variation of LiF refractive index for shock amplitudes ranging from 1.58 to 115 GPa. The refractive-index data for LiF agree with earlier static and shock-wave data, and exhibit a pronounced deviation from predictions based on the Gladstone-Dale, Lorentz-Lorenz, and Drude relations. A modified form of the Gladstone-Dale relation is presented which correctly models the latest LiF measurements. Potential applications of LiF and other window materials to dynamic high-pressure experimentation are discussed. DOE

FINGERING PATTERNS IN HELE-SHAW FLOW
J. V. Maher 1985 6 p Presented at the Workshop on the Physics of Finely-Divided Matter, Les Houches, France, 1 Mar. 1985
(Contract DE-FG02-84ER-45131)
(DE85-014952; CONF-8503178-1) Avail: NTIS HC A02/MF A01

The formation of fingers through the Saffman-Taylor instability in Hele-Shaw flow presents one of the simplest of pattern formation problems. The flow is governed by the Poisson equation and thus should have a close formal connection through its similarity to the random walk problem to diffusion limited aggregation (DLA). This poses the fascinating simulation problem of how much and which physical properties must be added to the essentially fractal DLA problem to mock up the interfacial conditions which produce the smooth fingering patterns seen in the Saffman-Taylor flow. The experimental work presented in this paper exploits the well-established critical properties of binary mixtures to vary the crucial viscosity contrast parameter more precisely and over a greater range than ever before. In addition the temporal development of the nonlinear pattern is determined more accurately than in most earlier work. DOE

THERMAL CONDUCTANCE OF METALLIC INTERFACE IN VACUUM
P. Mortazavi and D. Shu 1985 2 p Presented at the Particle Accelerator Conference, Vancouver, British Columbia, 13 May 1985 Previously announced in IAA as A86-10767
(Contract DE-AC02-76CH-00016)
(DE85-017860; BNL-36759; CONF-850504-261) Avail: NTIS HC A02/MF A01

A review of the background, method of measurement, and results of thermal conductance of metallic interface in vacuum is presented. Accurate conductance measurements are required for materials used in intercepting and stopping intense radiation beams. Measurement results of thermal conductance as a function of contact pressure for copper, beryllium copper and a combination of the two with platinum/indium pieces inserted between the interface are given. It is found that the conductance rate depends considerably on the surface condition, the material properties, and the uniform contact pressure. It is also found that the conductance rate of beryllium copper, which increased by 30 percent with the insertion of a platinum pinhole piece, increases with an increase in contact pressure, but the rate is smaller when compared with copper alone due to a lower thermal conductivity and also a greater hardness of beryllium copper. As the hardness of the insertion piece decreases, the conductance increases considerably. F.J.

RADIATIVE HEAT TRANSFER UNDER TRANSIENT CONDITIONS
P. G. Klemens Oct. 1985 32 p
(Contract DE-AC05-84OR-21400)
(DE86-001240; ORNL/Sub-84-89634/1) Avail: NTIS HC A03/MF A01

A theoretical model for transient radiative heat transfer through low-density fibrous or particulate insulation is discussed. Calculations are reported for the ratio of scattered to total radiation when one boundary of a region at constant temperature undergoes an instantaneous temperature increase. The scattered radiation does not transfer energy to the insulation and exceeds 10% of the total radiation for fiber diameters of less than about 4 (MU)m at low density. Calculations for spherical particles at low density also show scattered radiation exceeding 10% of total radiation for diameters less than about 7 (MU)m. The scattered fraction of initial radiative transfer is negligible in both cases for fractional densities greater than 0.03. DOE

Large quantities of low-grade energy in the form of low-pressure steam and low-temperature heat are often discharged to the environment by industry. The practical and economical recovery of energy from these sources is often limited by the number of applications that can directly use low-temperature heat. Thermo Electron has developed an open-cycle steam heat pump system capable of the direct recovery and upgrading of low-grade waste

energy. The system compresses low-pressure waste steam (or steam made from sources of low-temperature waste heat) to produce high-pressure steam suitable for use in industrial processes. A prototype system has been developed that is capable of recovering and recompressing up to 10,000 lb/hr of waste steam, while using only 50 percent of the fuel that would be required to produce comparable steam in a boiler. RANDOM TIMER Patent
F. A. Palvolgyi, inventor (to Air Force) Issued 13 Aug. 1985 7 p
Supersedes AD-D010533
(AD-D011937; US-Patent-4,535,466; US-Patent-Appl-SN-521803; US-Patent-Class-377-54) Avail: US Patent and Trademark Office
CSCL 14/2

The timer generates a selected number of control pulses per hour, at unpredictable (pseudo-random) intervals, for use with a time lapse video tape recorder user for time studies. The hour is divided into equal intervals to provide the number of samples required per hour, and one trigger pulse is generated randomly timed within each interval. A noise generator drives a counter whose outputs are loaded with every nth clock pulse into an N-stage shift register. The contents of the shift register are shifted out serially at the clock frequency. Author (GRA)

ANALOG INCLINATION DATA SYSTEM Patent
L. E. Wolfe and R. K. Howard, inventors (to Navy) Issued 30 Jul. 1985 4 p
(AD-D011940; US-Patent-4,531,299; US-Patent-Appl-SN-592038; US-Patent-Class-33-366) Avail: US Patent and Trademark Office
CSCL 13/10

This invention relates to a means for taking roller path inclination data as part of a weapons alignment sequence. And more particularly to a servo-accelerometer sensor and signal conditioning circuitry capable of detecting very small angular displacements. In order for a ship at sea to launch weaponry with the desired accuracy, part of the weapons system alignment sequence requires taking roller path inclination data so that all elements of the system will be referenced to the same reference plane. Ships at sea, however, are subject to pitch and roll; which motions affect the angular position of the ship with respect to the true vertical. Since the alignment of the weapon systems is done at night which is the time that ship and temperature conditions are the most stable, the human error factor is large. Eye fatigue from marking a small bubble in a vial is a great cause of error. Also mental arithmetic suffers in the early morning hours, and many recording errors or calculations have caused reversed plots of data or wrong entries. Bubble devices are an acceptable means of taking roller path inclination data if the allowable element tolerance is within the accuracy of the bubble device. GRA

EVALUATION OF IRREVERSIBLE HUMIDITY INDICATOR Final Report, Oct. 1984 - May 1985
A. K. Lo 14 Aug. 1985 10 p
(AD-A159840; DSTZT-85-R-01) Avail: NTIS HC A02/MF A01
CSCL 04/2

The performance characteristics of Irreversible Humidity Indicators were evaluated in a constant temperature/humidity chamber at various combinations of temperature and humidity conditions. The test results revealed significant information on its actuation threshold value and the degree of influence on the threshold value of these data will provide useful guidelines to field personnel who use the indicators and will also be used to establish requirements in procurement specifications. The purpose of this study was to evaluate the subject indicator under different sets of humidity and temperature conditions to: (1) establish the threshold value at ambient conditions, (2) determine the effect of temperature and humidity on actuation time, and (3) develop indicator performance characteristics required to establish procurement specifications requirements. THE 3He NUCLEAR GYROSCOPE Final Report, Nov. 1980 - Jul. 1985
G. L. Shaw Aug. 1985 66 p
(AF Proj. 2301)
(AD-A159924; FJSRL-TR-85-0003) Avail: NTIS
HC A04/MF A01 CSCL 17/7

The 3He nuclear gyroscope is a single species cryogenic device which can be instrumented as a three degree of freedom gyroscope. Sensitivities to dynamic terms can be molded, measured and compensated by generation of cross axis magnetic fields. The magnetic field generation scheme is the equivalent of putting the gyro on a stabilized platform but requires no moving parts. Such a gyroscope would be most useful integrated with other cryogenic instruments in a high accuracy all cryogenic inertial measurement unit. GRA

INDEPENDENT RESEARCH AND DEVELOPMENT: INFRARED

SENSOR TECHNOLOGY PROGRAM TEST PLAN
R. W. Bruns, J. H. Panesci, W. J. Tropf, and L. B. Weckesser
May 1985 37 p
(Contract N00024-85-C-5301)
(AD-A160061; JHU/APL/TG-1349) Avail: NTIS HC A037/MF A01 CSCL 17/3

The use of infrared (IR) guidance in high-performance, endoatmospheric missiles requires basic research and technology development to ensure survival adequate performance in the high-temperature environment of high-speed flight. This technology program combines development of both an analytical and an experimental capability to answer fundamental feasibility questions, to gather basic data, and to develop the capability to evaluate performance overall flight regimes. This test plan describes the experimental work to be conducted during 1985. Included are descriptions of the principal test facility, measurement instrumentation, and data recording used in the program. Aerothermal and optical performance measurements will be made on a test article (model) with an uncooled, hemispherical window. Mach 5 flow and heat-transfer rates representative of flight speeds from Mach 5 to Mach 6.5 and altitudes from 50,000 to 100,000 ft will be used. Test conditions, measurements and data reporting are described. GRA

HYPOTHESIS INTEGRATION IN IMAGE UNDERSTANDING SYSTEMS Interim Report
V. S. S. Hwang, L. S. Davis, and T. Matsuyama Jun. 1985 103 p
(Contracts NAS9-16664; F49620-83-C-0082)
(NASA-CR-176510; NAS 1.26:176510; AD-A160129; CAR-TR-130; CS-TR-1513; AFOSR-85-0876TR) Avail: NTIS HC A06/MF A01 CSCL 14/5

The goal of this research is to develop a robust control strategy for constructing image understanding systems (IUS). This paper proposes a general framework based on the integration of related hypotheses. Hypotheses are regarded as predictions of the occurrences of objects in the image. Related hypotheses are clustered together. A composite hypothesis is computed for each cluster. The goal of the IUS is to verify the hypotheses. We constructed an image understanding system, SIGMA, based on this framework and demonstrated its performance on an aerial image of a suburban housing development. GRA

[PROGRAM OF RESEARCH IN COMPUTER VISION, IMAGE PROCESSING AND ARCHITECTURES FOR IMAGE PROCESSING] Final Report, 1 Dec. 1982 - 31 Jan. 1985
J. K. Aggarwal Jan. 1985 31 p
(Contract F49620-83-K-0013)
(AD-A160248; AFOSR-85-0824TR) Avail: NTIS HC A03/MF A01 CSCL 09/2

The Laboratory for Image and Signal Analysis conducts a broad program of research in computer vision, image processing and architectures for image processing. During the period of this report, several projects were completed including those on positioning and tracking of objects moving in space, parallel image processing, 3-D representation and recognition from range data and a normalized quadtree representation. A new approach to the problem of tracking of objects in space is formulated which is significantly simpler and robust in solution. Previously available quadtree description of objects is modified to develop a new description called normalized quadtree representation. This representation is found to be compact as well as useful in the recognition of objects. A methodology for analysis of architectures for parallel image processing is proposed. Our research advocates an application-drive approach for using parallel architectures for image processing. GRA

AN OPTICAL WAVEGUIDE HUMIDITY DETECTOR Memorandum Report, Apr. - Oct. 1984
D. S. Ballantine and H. Wohltjen 31 Oct. 1985 28 p
(AD-A160577; NRL-MR-5666) Avail: NTIS HC A03/MF A01 CSCL 14/2

An optical waveguide humidity detector is described that is reliable and inexpensive. It utilizes a cobalt chloride/poly(vinyl pyrrolidone) film on the surface of a thin walled glass capillary waveguide, and monitors the absorption change at 660 nm as the waveguide is exposed to H2O(g). The humidity response is an S-shaped curve with the inflection point between 65% and 80% RH; location of inflection point is correlated with CoCl2 and PVP concentration in the film. The effects of reagent concentration and film thickness on detector response are described. GRA

COMPARISON OF TWO MTF MEASUREMENT METHODS: SINE-WAVE VERSUS EDGE GRADIENT ANALYSIS M.S. Thesis
J. R. Cadou Jul. 1985 97 p
(AD-A160800; AFIT/CI/NR-85-136T) Avail: NTIS HC A05/MF A01 CSCL 14/5

A comparison of the sine-wave and edge gradient MTF (Modulation Transfer Functions) measurement methods, on a photographic black and white film, was performed. A statistical test, a CMT (Cascade Modulation Transfer) acutance test, and a graphical comparison showed that there was no significant difference between the two measurement methods. This was true for the film processed to have large adjacency effects, as well as for the film processed to have no adjacency effects; however, the agreement was slightly better for the latter process. The research also showed that aligning the midpoints of the edge traces, normalizing the individual edge traces, and then averaging several edge traces significantly reduced grain noise, and produced a superior representative edge for MTF analysis. A new adaptive damping filter also proved quite successful in the suppression of grain noise without degrading the MTF measurement. The combination of averaging several edge traces, and then using the adaptive filter, produced excellent MTF results from the edge traces. GRA

A DIGITAL MICROBAROGRAPH SYSTEM Final Report, Jul. 1983 - Oct. 1984
R. E. Reinke May 1985 54 p
(AF Proj. 8809)
(AD-A160914; AFWL-TR-84-142) Avail: NTIS HC A04/MF A01 CSCL 14/2

Off-site low pressure airblast measurements are required on almost every high-explosive simulation test. Existing analog equipment which has been used for many years to make these measurements possesses several drawbacks in terms of excessive weight and power requirements and relatively narrow dynamic range of the paper and ink strip chart recording method. By making minor modifications to off-the-shelf recorders and pressure transducers, a digital microbarograph system has been developed which exhibits significant advantages over existing analog equipment in terms of weight, power requirements and dynamic range. Field and laboratory testing of the digital system over the past year has proven it to be a reliable and versatile alternative to existing systems. GRA

LOW-COST MICROPROCESSOR CONTROLLED SHADOWBAND RADIOMETER
J. J. Michalsky, B. A. LeBaron, and L. C. Harrison Jun. 1985 6 p Presented at INTERSOL 1985 - Solar Energy: the Diverse Solution, Montreal, Canada, 23 Jun. 1985
(Contract DE-AC06-76RL-01830)
(DE85-016614; PNL-SA-13094; CONF-850604-15) Avail: NTIS HC A02/MF A01

This paper describes the second phase in the development of a low-cost microprocessor-controlled rotating shadowband radiometer at PNL. The initial work, to develop a solar photometer, resulted in a mechanical design that is adopted for the solar radiometer with only minor changes. The goals of this effort are: (1) to improve the data acquisition system; and (2) to derive corrections for the silicon cell-based pyranometer that would allow measurements of total horizontal, diffuse horizontal, and direct normal solar radiation approaching first-class instrumentation accuracy at a fraction of the cost. Significant progress on temperature, cosine and spectral corrections is achieved. DOE

DEVELOPMENTS IN GAS DETECTORS FOR SYNCHROTRON X-RAY RADIATION
J. Fischer, V. Radeka, and G. C. Smith Sep. 1985 22 p Presented at the 2nd International Synchrotron Radiation Instrumentation Conference, Stanford, Calif., 29 Jul. 1985
(Contract DE-AC02-76CH-00016)
(DE86-001207; BNL-37041; CONF-850734-11) Avail: NTIS HC A02/MF A01

New results on the physical limitations to position resolution in gas detectors for X-rays (approx. =3 to 20 keV) due to the range of photoelectrons and Auger electrons are discussed. These results were obtained with a small gap detector in which position readout was accomplished by using a very low noise centroid finding technique. A description is given of position sensitive detectors for medium rates (a few x 10(5) photons per second), using delay line readout, and for very high rates (approx. =10(8) photons per second), using fast signal shaping on the output of each anode wire. TRANSVERSE FLOW CW ATOMIC IODINE LASER SYSTEM Patent
L. A. Schlie and R. D. Rathge, inventors (to Air Force) Issued 13 Aug. 1985 8 p Supersedes AD-D011098
(AD-D011933; US-Patent-4,535,457; US-Patent-Appl-SN-593759; US-Patent-Class-372-58) Avail: US Patent and Trademark Office CSCL 20/5

A transverse flow continuous wave atomic iodine laser system uses a closed cycle fuel system to operate in a continuous mode. An elliptical pump cell having a Hg arc lamp cooled by deionized water irradiates with UV energy C3F7I gas to produce excited atomic iodine. A transverse flow section attached to the pump cell channels C3F7I gas into a laser cell where lasing occurs. The flow section has upstream and downstream flow cavities, triangular shaped, that channel the laser gas. A diffuser and flow straighteners are placed in these cavities to make velocity across the transverse laser axis as uniform as possible so as to produce very stable laser gain output. GRA

ZINC-DIFFUSED NARROW STRIPE AlGaAs/GaAs DOUBLE HETEROSTRUCTURE LASER Patent
Y. Z. Liu, C. S. Hong, P. D. Dapkus, and J. J. Coleman, inventors (to Navy) Issued 14 May 1985 7 p Supersedes AD-D009990
(AD-D011943; US-Patent-4,517,674; US-Patent-Appl-SN-413596; US-Patent-Class-372-45) Avail: US Patent and Trademark Office CSCL 20/5

This document describes a zinc-diffused narrow stripe AlGaAs/GaAs double heterostructure laser device and a method of making the same. A double heterostructure layered structure including a p-type GaAs active layer sandwiched between two n-type AlGaAs confinement layers is formed on a substrate. A p-type zinc diffused stripe region having a U-shaped diffusion front extends longitudinally between two reflective surfaces located on respective ends of the device and extends vertically from the surface of the upper confinement layer down to at least the surface of intersection between the active layer and the lower confinement layer. In a method of forming the device, the various layers are formed by epitaxial growth or by metalorganic chemical vapor deposition. The stripe region is formed by diffusing zinc from a source through a slot in a diffusion mask. The zinc diffused into the device is driven in by heating the device in the absence of the zinc source. LASER DAMAGE TO SPHERICAL TARGETS M.S. Thesis
C. O. Stephenson Jun. 1985 62 p
(AD-A159717) Avail: NTIS HC A04/MF A01 CSCL 20/5

Previous research has investigated laser beam interaction with flat surfaces. Those studies have generated theoretical foundations for cratering, plasma formation and expansion, and electric and magnetic field dynamics. This thesis applies previously developed theory to understanding damage to spherical targets of 1 millimeter diameter and smaller. The targets analyzed were irradiated on one side with 300 picosecond iodine laser pulses (6 X 10 to the 15th power w/sq cm. Direct laser beam damage and surface damage to areas remote from the focal spot were analyzed. Time-resolved pinhole photography, X-ray spectroscopy, and electron microscope photography were used to determine sequence, mode and severity of damage. Finally, a model for the creation and spread of the laser-produced plasma around the sphere is formulated, taking into account plasma pressure gradients, magnetic fields and hot-electron transport. HIGH VOLTAGE PICOSECOND PULSE GENERATION UTILIZING LASERS Final Report
R. Heintz, F. I. Tseng, and T. K. Sarkar 23 Jul. 1985 14 p
(Contract N00014-84-C-0179)
(AD-A159923) Avail: NTIS HC A02/MF A01 CSCL 20/5

A mod-locked Q-switched Nd:YAG laser is used to generate a train of light pulses of approximately 70 picoseconds duration. The energy in these laser pulses are of the order of 2 milli-joules. The train of pulses are then passed through a switchout so that a single pulse is selected. This single pulse then strikes a chromium doped GaAs semiconductor switch which then conducts. If a high voltage supply is connected to one end of the switch and a load is connected to the other end, then the load will observe an electrical pulse which is half the amplitude of the d.c. voltage and of the order of 100 to 200 picosecond duration. The width of the electrical pulse is determined by the width of the laser pulse and of the characteristics of the transmission line over which the GaAs is mounted. Author (GRA)

MOLECULAR BACK FLOW FROM THE EXHAUST PLUME OF A SPACE-BASED LASER M.S. Thesis
S. E. McCarty Jun. 1985 55 p
(DARPA Order 4573)
(AD-A159998; AD-E401386; NPS67-85-003) Avail: NTIS HC A04/MF A01 CSCL 20/5

Back flow from the exhaust of a chemical laser in low Earth orbit may be detrimental to the integrity and operation of the selfsame system. Difficulties arise in the calculation of exhaust plume properties and molecular flux as the gas expands from continuum to free-molecular flow. The solution of the governing Boltzmann equation is exceedingly complex; similarly, numerical solutions such as the Direct Simulation Monte Carlo technique required prohibitive amounts of computer processing time. This thesis presents an alternate method of the assessment of molecular flux in which the continuous transition from viscous to collisionless flow is approximated by a suitably defined breakdown surface. The molecular flux incident on a given area of the spacecraft surface is determined by integration of flux from all significant portions of the breakdown surface. Results are presented for exhaust plumes of various stagnation and exit plane conditions emanating from an axisymmetric ring nozzle. GRA

AN INVESTIGATION OF LASER INDUCED SURFACE DAMAGE IN GLASS M.S. Thesis
R. D. Uyak Jun. 1985 53 p
(AD-A160009) Avail: NTIS HC A04/MF A01 CSCL 11/2

Laser-induced plasma surface damage in a transparent dielectric is investigated. The possible occurrence of unipolar arcing as a damage mechanism in nonconductors is examined. Experiments were conducted using a neodymium glass laser in a Q-switched mode to create a hot plasma. The plasma damage on both entrance and exit surfaces was examined. The morphology of damage is qualitatively analyzed. Several theories are applied in explanation of the damage obtained. The appearance of micropitting at the periphery of the laser impact area of the targets indicates the possible occurrence of unipolar arcing as a damage mechanism. Other damage mechanisms include thermal stress,

electron avalanche, particle deposition, and micropitting from particle inclusions or surface imperfections. GRA

HC A03/MF A01 CSCL 20/12

Research involving femtosecond-process measurement in the frequency domain, laser surface transformations and damage mechanisms, the study of specific quantum-well structures, and the development of optical beam expanders were completed. In particular, attempts to suppress troublesome thermal-grating effects in frequency-domain measurements of femtosecond processes produced two entirely different and successful techniques, each of which yields other advantages as well. Our studies of laser-solid interactions have led to a better understanding of transient electronic processes in very dense and hot electron-hole plasma in semiconductors and of the formation of single-lase-beam-induced spontaneous surface ripples on a multitude of solid materials. Our time-resolved studies of GaAs/AlxGa1-xAs quantum well structures successfully measured the photoluminescence decay times of carriers in structures grown by both molecular beam epitaxy and metalorganic chemical vapor deposition. Much was learned about the nature of nonradiative recombination dynamics in these structures. Results consistency indicated that the fundamental radiative recombination coefficient, B, in quantum wells is quite small. Optimal designs were developed for achromatic prism beam expanders, based on a remarkedly simple and elegant theoretical analysis. GRA

SURFACE INFRARED REFLECTION-ABSORPTION SPECTROSCOPY USING A TUNABLE DIODE LASER
J. E. Butler, V. M. Bermudez, and J. L. Hylden 1 Oct. 1985 22 p
(AD-A160145; TR-1) Avail: NTIS HC A02/MF A01 CSCL 07/4

Single-reflection infrared reflection-absorption spectra (IRRAS) of adsorbates on surfaces have been obtained using a tunable diode laser radiation source. Surface sensitivity is achieved through the use of polarization modulation, and the high brightness of the laser light source has made possible the observation of vibrational modes at energies much lower than those accessible with conventional blackbody sources. Results are presented for the chemisorption of oxygen on polycrystalline aluminum showing surface (580/cm) and subsurface (890/cm) Al-O stretching modes at sub-monolayer coverage. Author (GRA)

(AD-A160186; AFOSR-85-0809TR) Avail: NTIS
HC A03/MF A01 CSCL 20/5

This report covers X-ray laser development in magnetically confined plasmas, as well as in expanding recombining plasma columns using time resolved soft X-ray monochromators. Experiments with both solid and gas targets resulted in gain measurements for hydrogen-like Carbon(6+) (CVI) ions and population inversion measurements for lithium-like Neon(8+) (NeVIII) ions. Our most recent results, involving carbon disc targets in a 90 k Gauss field with a 300 Joule carbon dioxide laser pulse, in which a one-pass gain of kl 6.5 (enhancement of stimulated emission over spontaneous emission about 100) was obtained for CVI 182A are presented. Results of a gain kl = 3.0 (k approx. 7.5/cm) for thick carbon fiber targets are also presented. Population inversions of NeVIII ions as a function of initial gas pressure are also discussed, as well as an overview of the instrumentation, experimental setup, and target configurations used. GRA

HC A05/MF A01 CSCL 17/8

Project ABLE (Atmospheric Balloonborne Lidar Experiment) is part of the A.F. Geophysics Laboratory's continuing interest in developing techniques for making remote measurements of atmospheric quantities such as density, pressure, temperatures, and wind motions. The system consists of a balloonborne lidar payload designed to measure neutral molecular density as a function of altitude from ground level to 70 km. The lidar provides backscatter data at the doubled and tripled frequencies of a Nd:YAG laser, which will assist in the separation of the molecular and aerosol contributions and subsequent determination of molecular and aerosol contributions and subsequent determination of molecular density vs altitude. The object of this contract was to fabricate and operate in a field test a balloonborne lidar experiment capable of performing nighttime atmospheric density measurements up to 70 km altitude with a resolution of 150 meters. The payload included a frequency-doubled and -tripled Nd:YAG laser with outputs at 355 and 532 nm; a telescoped receiver with PMT detectors; a command-controlled optical pointing system; and support system, including thermal control, telmetry, command, and power. Successful backscatter measurements were made during field operations which included a balloon launch from Roswell, NM and a flight over the White Sands Missile Range. GRA

STUDIES OF COMPOUND STATES OF NEGATIVE IONS USING LASER BEAMS Summary Report, 12 Oct. 1984 - 30 Sep. 1985
R. N. Compton and G. D. Alton 15 Aug. 1985 55 p
(Contracts N00014-85-F-0011; DE-AC05-84OR21400; RR0-1103)
(AD-A160483) Avail: NTIS HC A04/MF A01 CSCL 07/4

This research involves experimental studies of compound states of negative ions using laser beams. Negative ion beams of stable (H-, O-, etc.) and metastable (He-, Be-, Ca-, etc.) species are generated by double charge exchange from positive ion beams colliding with alkali vapor. Measurements of the photodetachment and autodetachment spectra for these ions provide new information on compound state energy levels. In addition experiments are underway to study the collisions of electrons with atoms in strong laser fields. Many theoretical predictions have been presented recently on this subject. These experiments should provide the first tests of such predictions. GRA

NONLINEAR ANALYSIS OF UBITRON/FREE-ELECTRON LASER AMPLIFIERS IN THREE-DIMENSIONS
A. K. Ganguly and H. P. Freund 8 Oct. 1985 41 p
(AD-A160631; NRL-MR-5669) Avail: NTIS HC A03/MF A01 CSCL 20/5

The nonlinear evolution of the Free-Electron Laser/Ubitron amplifier is investigated numerically for a configuration consisting of helical wiggler and an axial guide magnetic fields. A set coupled nonlinear differential equations is derived in three-dimensions which governs the self-consistent evolution of either the TE or TM modes in a loss-free cylindrical waveguide and the trajectories of an ensemble of electrons. The initial conditions are chosen to model the adiabatic injection of a cold, cylindrically symmetric electron beam into an interaction region in which the wiggler amplitude rises slowly from zero to a constant level in ten wiggler periods. Both self-field and space charge effects have been neglected in the formulation, and the analysis is valid for the High-Gain Compton regime of operation. Numerical simulations are conducted to model an amplifier operating in the neighborhood of 35 GHz, and for electron beam energies of energies of 250 KeV and 1 MeV. The growth rate in the linear regime prior to saturation is found to be in substantial agreement with the predictions based on a linear theory of the instability, and the saturation efficiency is consistent with that expected on the basis of simple, heuristic phase-trapping arguments. Substantial enhancements in the efficiency are found to occur due to the presence of the axial guide field. GRA

PARTICLE-IN-CELL SIMULATIONS OF THE LASERTRON
Michael E. Jones and William K. Peter 1985 4 p refs Presented at the Particle Accelerator Conference, Vancouver, British Columbia, 13-16 May 1985
(Contract W-7405-eng-36)
(DE85-012698; LA-UR-85-1352; CONF-850504-114) Avail: NTIS HC A02/MF A01

The lasertron is a device for producing intense, very short, pulsed ectron beams. The current is not space-charge limited and follows the laser intensity. The electron pulse is then accelerated out of the device by a constant voltage. In the RF lasertron, the diode becomes an RF cavity. This improves the breakdown characteristics of the device, allowing higher voltages to be applied and hence higher currents to be obtained. The calculations are aimed at producing a 10 nC electron beam with an emittance of less than 40 mm-mrad or use in free-electron laser experiments. A class of electrode shapes was obtained which in the absence of space charge produces no emittance growth. These shapes were studied with the particle-in-cell simulation model ISIS, and the electrodes which produce minimum emittance including the effect of space charge were determined. Unique emittance problems associated with the time dependence of the beam pulse are studied and conditions for reducing these effects are discussed. Author

PARTIALLY COHERENT X-RAYS FROM MODERN STORAGE RINGS
D. Attwood, K. Halbach, and K. J. Kim Nov. 1984 7 p refs Presented at the Workshop on VUV and X-ray Sources, Washington, D.C., 9 Nov. 1985
(Contract DE-AC03-76SF-00098)
(DE85-011157; LBL-19354; CONF-851139-1) Avail: NTIS HC A02/MF A01

Several routes to the development of ideal soft X-ray sources are now being actively pursued. These include atomic lasers, free electron lasers (FELs), and storage ring (synchrotron) undulators. For short wavelength (XUV) applications, FELs and undulators are very closely related, each being dependent on the development of well controlled (low emittance) electron storage rings, with energies of order 0.5 to 1.5 GeV beam energy, and many period magnetic structures, referred to as undulators. The major thrust of this article is that undulators provide the only sure route to coherent soft X-rays in the near term, that they are tuneable throughout the region of interest, and that they will serve a multitude of users, in disparate fields of science and technology, albeit at a large central research facility. LASER INDUCED FLUORESCENCE OF TRAPPED MOLECULAR IONS
B. C. Hale and J. Perkins 1985 3 p refs
(Contract DE-AS05-83ER-13134)
(DE85-016898; DOE/ER-13134/2) Avail: NTIS HC A02/MF A01

The chemistry of molecular ion reactions is important to many processes such as plasmas and combustion systems. Also, many practical devices such as lasers depend upon the existence of ions. However, the amount of spectroscopic and dynamical information on ionic processes is very limited. For instance, at the present time only about sixty molecular ions have been observed spectroscopically and only a few of these have been studied in great detail. The specific aim of this research is to obtain spectroscopic measurements of molecular ions, such as CO(+), CN(+), NH(+), and NH2(+), confined in an R-F quadrupole trap. DOE

EFFECTS OF TWO-PHASE FLOW IN SHAFT SEALS Ph.D. Thesis
Richard Maxwell Beeler 1985 145 p
Avail: Univ. Microfilms Order No. DA8517513

Fluid flow in shaft seals is analyzed with special attention given to the effects of phase change in the fluid due to vaporization. These effects are extremely important in a wide range of applications, from the cryogenic LOX turbo-pump seal used in the space shuttle, to ordinary water pump seals. Three models for axisymmetric flow in radial face shaft seals are presented. A steady state heat transfer model is presented which relates the temperature and heat flux profiles for an arbitrary number of radial nodes in the fluid film. A model for steady laminar flow in radial face shaft seals is developed. A numerical solution procedure is described and examples are presented for water assuming a discrete boiling location. Models for steady turbulent flow in radial face seals and annular ring seals are developed. A numerical solution procedure is described and examples are presented for liquid oxygen with high leakage rates typical of rocket turbo-pumps. Choking occurs at the seal exit for typical leakage rates. Heat addition through viscous dissipation due to shaft rotation significantly increase the amount of vaporization. A model for squeeze-film damping is developed with complete solutions for pressure and load support for an incompressible liquid. Expressions for the transient variation of fluid properties in the two-phase and vapor regions are presented. Dissert. Abstr.

OPTIMIZATION OF MECHANISMS FOR FORCE GENERATION BY USING PULLEYS AND SPRING Interim Report
T. Okada Sep. 1985 38 p
(AD-A159944; CMU-RI-TR-85-14) Avail: NTIS HC A03/MF A01 CSCL 13/8

A mechanism is described for achieving a desired force/motion relationship. The mechanism employs two hinged arms with pulleys and springs. In comparison to active force-control methods, the device is compact, energy saving, and robust. The device is ideally suited to miniature devices and, in a recent application, has been used in a mobile robot for inspecting pipes. The relationship between the motion of the mechanism and its output force is analyzed using both analytical and approximate techniques to determine the optimum configuration and the dimensions of the various components. In the final design, experimental results demonstrate the superiority of noncircular eccentric pulleys over conventional pulleys for producing a specified force/motion curve. GRA

THE SCIENCE OF AND ADVANCED TECHNOLOGY FOR COST-EFFECTIVE MANUFACTURE OF HIGH PRECISION ENGINEERING PRODUCTS. VOLUME 2: MECHANICS OF TWO AXES PASSIVE PRECISION LEVEL MONITOR FOR MACHINE TOOLS Final Report, 1 Jan. 1983 - 1 May 1984
J. D. York and J. Modrey May 1985 111 p
(Contract N00014-83-K-0385)
(AD-A160140) Avail: NTIS HC A06/MF A01 CSCL 20/6

A mechanism is proposed as a means of passively leveling an optical assembly about two horizontal axes within a tolerance of one arc-second. The mechanism is designed so that it will stimulate a spherical pendulum for input motions up to 100 arc-seconds. In order to insure the operation of the mechanism and establish the proper geometry, three analytical models were developed. Planar and spatial models which assumed rigid links with pin joints and a planar model assuming deformable links with pin and clamped joints were studied. These results are compared with experimental data gathered for three geometry combinations. It is shown that the results from the planar and spatial analytics agree to within 10%, with the spatial model predicting less error. Hence, the less complicated planar analysis may be performed with little loss in accuracy. Neither rigid link models compare well with the experimental data, with as much as an 80% discrepancy in some cases. When deformable links are included in the planar model, the results are within 16% of the experimental results. This indicates that the resistance to bending at the points can not be neglected in modeling and mechanism to act like a spherical pendulum, and guidelines are established for the design. GRA

LONG-TERM, DEEP OCEAN TEST OF CONCRETE SPHERICAL STRUCTURES. RESULTS AFTER 13 YEARS Technical Report, Mar. 1978 - Nov. 1984
R. D. Rail and R. L. Wendt Jul. 1985 70 p
(AD-A160232; NCEL-TR-915) Avail: NTIS HC A04/MF A01 CSCL 11/2

In 1971, a long-term, deep-ocean test was started on 18 pressure-resistant, hollow concrete spheres, 66 inches in outside diameter by 4.12 inches in wall thickness. The spheres were placed in the ocean near the seafloor at depths from 1,840 to 5,075 feet. Over a 13 year period, annual inspections of the spheres using submersibles have provided data on time-dependent failure and permeability. After 5.3 years of exposure, three spheres were retrieved from the ocean for laboratory testing, and after 10.5 years two more spheres were retrieved and tested. This report is the third report in a series describing and summarizing the findings from the ocean and laboratory tests. Data on concrete compressive strength gain, short-term implosion strength of the retrieved spheres, and permeability and durability of the concrete were obtained. The data have shown that concrete exhibits good behavior for ocean applications. High quality, well-cured concrete can be expected to gain and maintain strength when submerged in seawater under high pressure. Concrete is a durable material in the deep ocean; neither deterioration of the concrete matrix nor corrosion of reinforcing steel are problems, even though the concrete becomes saturated with seawater. Uncoated concrete has a very low rate of premeation of seawater through the concrete and even this small flow can be prevented by a waterproofing coating. Author (GRA)

SURFACE CREEP OF MINERAL OIL ON INNER RING OF MOMENTUM WHEEL BEARING
P. D. Fleischauer and H. D. Marten 19 Aug. 1985 29 p
(Contract F04701-83-C-0084)
(AD-A160746; TR-0084A(5945-03)-1; SD-TR-85-52) Avail: NTIS
HC A03/MF A01 CSCL 11/8

Lubricant distribution on the inner ring of an inner-ring rotating bearing may depend on the creep of oil from the bearing raceway up onto the land and subsequent transfer to retainer surfaces. To study creep patterns for a bearing spinning at speeds up to 9000 rpm, a fixture was built so that the motion of the oil could be observed and photographed using ultraviolet stimulated luminescence of the oil. Oil was supplied by and impregnated wick that was allowed to rub against what would normally be the ball track in the raceway (the balls were not present). The oil was observed to migrate up the curved surface until it reached the corner of the raceway. A bead of oil would form at that corner. In one case oil actually creep across the land. The oil bead thickness was a function of speed, but at 9000 rpm should be approximately 0.12 mm (0.005 in). Author (GRA)

A ROBUST LAYERED CONTROL SYSTEM FOR A MOBILE ROBOT
R. A. Brooks Sep. 1985 28 p
(Contracts N00014-82-K-0334; N00014-80-C-0505)
(AD-A160833; AI-M-864) Avail: NTIS HC A03/MF A01 CSCL 09/2

We describe a new architecture for controlling mobile robots. Layers of control system are built to let the robot operate at an increasing level of competence. Layers are made up of asynchronous modules which communicate over low bandwidth channels. Each module is an instance of a fairly simple computational machine. Higher level layers can subsume the roles of lower levels by suppressing their outputs. However, lower levels continue to function as higher levels are added. The result is a robust and flexible robot control system. The system is intended to control a robot that wanders the office areas of our laboratory, building maps of its surroundings. In this paper, we demonstrate the system controlling a detailed simulation of the robot. GRA

STUDY OF FAN-AIRPUMP APPLICABILITY TO TWO-STAGE AIR CLEANER SYSTEMS Final Technical Report
M. B. Treuhaft Jun. 1985 74 p
(Contract DAAE07-84-C-R045)
(AD-A160838; SWRI-03-8070; TACOM-TR-13118) Avail: NTIS
HC A04/MF A01 CSCL 13/1

An experimental program was conducted to evaluate applicability of the fan-airpump concept as applied to military air cleaner systems and vehicles. Technical feasibility and potential use were evaluated through laboratory testing which defined fan-airpump performance characteristics and investigated the performance envelope of the fan-airpump concept when applied to the 2-1/2 and 5-ton truck. Economic feasibility was assessed by comparing projected fan-airpump life cycle cost factors with similar cost factors associated with blower motor systems. Because it has no moving part, requires no lubrication, and is practically maintenance, free, the use of a fan-airpump to develop the scavenge flows required by two-stage air cleaner systems would alleviate the problems caused by unreliable blower motors or marginal exhaust aspirator replacements. As a result, the fan-airpump could become a major component for improving reliability and operational readiness for many vehicles operating with two-stage air cleaner systems. GRA

HC A02/MF A01

The present invention is designed to achieve continuous high efficiency cryopumping of a vacuum vessel by improving upon and combining in a novel way the cryopumping in a novel way the cryopumping methods. The invention consists of a continuous operation cryopump, with movable louvers, with a high efficiency pumping apparatus. The pumping apparatus includes three cryogenic tubes. They are constructed of a substance of high thermal conductivity, such as aluminum and their exterior surfaces

are cryogenic condensing surfaces. Through their interior liquid or gaseous helium from two reservoirs can be made to flow, alternately promoting extreme cooling or allowing some warming. DOE

ASSESSMENT OF GOVERNMENT TRIBOLOGY PROGRAMS
M. B. Peterson and T. M. Levinson Sep. 1985 280 p
(Contract DE-AC06-76RL-01830)
(DE86-001121; PNL-5539) Avail: NTIS HC A13/MF A01

An assessment has been made to determine current tribology research and development work sponsored or conducted by the government. Data base surveys and discussions were conducted to isolate current projects sponsored primarily by 21 different government organizations. These projects were classified by subject, objective, energy relevance, type of research, phenomenon being investigated, variables being studied, type of motion, materials and application. An abstract of each project was prepared which included the classification, sponsor, performing organization and a project description. It was found that current work is primarily materials oriented to meet military requirements. Other than the high temperature programs very few of the tribology projects accomplish energy related objectives. DOE

CLAMPING AND POSITIONING SYSTEM TO BE APPLIED FOR THE MANUFACTURING OF SMALL AND MEDIUM SIZED BATCHES ON NUMERICAL CONTROL (NC) MACHINES
H. Bald, W. Eversheim, A. Fuerst, R. Koch, F. Lock, T. Pfeifer, H.-D. Schoellhorn, and M. Weck Aug. 1985 133 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie Prepared in cooperation with Technische Hochschule, Aachen, West Germany and Forkardt (Paul) G.m.b.H and Co., Kg., Dusseldorf, West Germany
(KfK-PFT-95) Avail: NTIS HC A07/MF A01

The sheet ball positioning technique for accurate and rapid workpiece assembly on numerically controlled (NC) machines for mass production in small and medium batches was analyzed regarding workpiece geometry and clearance with respect to the support surface, flexible layout modification and machining operations (milling and boring). The effects of the workpiece shape on the clamping device and of the machining operations on the positioning device are investigated. The relationship between force and penetration depth, positioning accuracy, and shearing are studied. Further automation of the clamping device is achieved with a clamping bridge assembly adaptable on NC milling and boring machines and with hybrid units. The flexible sheet ball positioning technique can be economically applied for parts production and assembly with simpler checks and parts dimensioning. Rational workpiece production depends on product design, parts shape, work preparation, facility design and NC machine programming. Author (ESA)

DEBURRING OF METAL WORKPIECES WITH DIRECTED HIGH PRESSURE WATER JETS. BASIS AND APPLICATION LIMITS
K. Przyklenk, M. Schlatter, R. Thiel, and P. Willems Aug. 1985 252 p refs In GERMAN; ENGLISH summary Prepared in cooperation with Daimler Benz A.G., Stuttgart, West Germany, Festo Maschinefabrik, Esslingen, West Germany, Mahle G.m.b.H., Stuttgart, West Germany and Woma Apparatebau, Duisburg, West Germany
(KfK-PFT-107) Avail: NTIS HC A12/MF A01

Application of high pressure water jets in metal workpiece deburring operations was investigated regarding pressure range and water mass flow rate on a jet cutting facility equipped with a high pressure pump and on a cleaning facility. The effects of the water jets on aluminum workpieces are analyzed. The effects of the pump pressure changes in width and depth on the workpiece area and of the nozzle diameter variation are studied. Mathematical results show good agreement with experimental results. Sound and humidity emissions are measured for noise reduction and safety measure recommendations. Thermal chemical deburring, electrochemical deburring, and wet jet cutting are compared with high pressure water jet deburring. High pressure water jets can be applied for a large range of deburring operations. Author (ESA)

EMISSION CHARACTERIZATION OF A 2-STROKE HEAVY-DUTY DIESEL COACH ENGINE AND VEHICLE WITH AND WITHOUT A PARTICULATE TRAP Final Report, 20 Apr. 1982 - 28 May 1983
T. L. Ullman and C. T. Hare Mar. 1985 138 p
(Contract EPA-68-03-3073)
(PB85-239770; EPA-460/E-84-015) Avail: NTIS HC A07/MF A01 CSCL 13B

Diesel soot or smoke has been regarded as a nuisance pollutant and potential health hazard, especially in congested urban areas where diesel buses operate. Exhaust emissions from a DDAD 6V-71 coach engine and a similarly-powered 1980 GMC RTS-II coach, fitted with a non-catalyzed particulate trap, were characterized over various Federal Test Procedures for heavy-duty engines, including an experimental test cycle for buses. Regeneration was accomplished using an in-line burner in the exhaust to raise the engines' idle exhaust gas temperature from 120 to 700 C. trap testing included approximately 15 hours of engine operation and 100 miles of bus operation. Particulate emissions were reduced by an average of 79 percent and smoke emissions were nil using the trap. The effect of the trap on regulated and other unregulated emissions were generally minimal. ELASTIC BUCKLING OF THIN-WALLED UNSTIFFENED CIRCULAR CYLINDERS UNDER BENDING, AXIAL COMPRESSION AND INTERNAL PRESSURE
May 1984 13 p refs Submitted for publication
(ESDU-84006; ISBN-0-85679-468-6; ISSN-0144-2805; ISSN-0141-4097) Avail: ESDU

ESDU data item 84006 provides data for the prediction of the extreme fiber stress at buckling of a cylinder under a bending moment alone or under combined bending moment and axial compression. The effect of internal pressure on buckling stress for cylinders under bending is included. The data are given as curves obtained by correlating a large number of experimental data drawn from diverse sources and therefore take account of realistic irregularities. The influence of the nonlinear or Brazier effect due to progressive ovalization of the cylinder cross-section under a bending moment is considered, and an equivalent extreme fiber stress calculated at collapse. A practical worked example illustrates the use of the data. Author

ESTIMATION OF r.m.s. STRAIN IN LAMINATED SKIN PANELS SUBJECT TO RANDOM ACOUSTIC LOADING
Jul. 1984 38 p Submitted for publication
(ESDU-84006-A; ISBN-0-85679-470-8; ISSN-0141-3916) Avail: ESDU

A computer program is provided for the estimation of r.m.s. surface strains in rectangular laminated skin panels. It applies to specially-orthotropic plates having principal axes of orthotropy parallel to the plate edges. A precise definition of this class of plates is given in ESDU 83035. The calculation procedure is particularly applicable to fiber-reinforced composite laminated plates. The computer program evaluates r.m.s. strains parallel to the shorter (or curved edge, if the plate is curved) at the mid points of the longer edges and at the plate center. The analysis is a simplified normal mode method assuming a single mode (fundamental) response but uses empirically derived correction factors. A good correlation is shown between predictions using the method and available experimental results extracted from the literature. Full listings of the program in BASIC and FORTRAN IV are included. Author

BUCKLING OF THIN-WALLED UNSTIFFENED CIRCULAR CYLINDERS UNDER TORSION AND PRESSURE
Aug. 1984 14 p refs Submitted for publication
(ESDU-84012; ISBN-0-85679-474-0; ISSN-0144-2805; ISSN-0141-4097) Avail: ESDU

Graphs enable the buckling stress to be predicted of the cylinders when subjected to torsion alone. All cylinder lengths are covered, from infinitely long, through cylinders whose buckling is affected by their length but not by the end conditions, down to short cylinders where both length and end conditions influence buckling. The transitions between the three cases were established by a statistical analysis of the results of 168 tests extracted from the literature. The effect of internal or external pressure on buckling is treated, as is the influence of material plasticity. The data also relate to ring-stiffened cylinders, the cylinder length then being the ring spacing. A practical worked example illustrates the use of the information. Author

ESTIMATING THE R-CURVE FROM RESIDUAL STRENGTH DATA
Thomas W. Orange 1985 17 p refs Presented at the International Conference and Exhibition on Fatigue, Corrosion Cracking, Fracture Mechanics and Failure Analysis, Salt Lake City, Utah, 2-6 Dec.

1985; sponsored by the American Society for Metals
(NASA-TM-87182; E-2832; NAS 1.15:87182) Avail: NTIS HC A02/MF A01 CSCL 20K

A method is presented for estimating the crack-extension resistance curve (R-curve) from residual-strength (maximum load against original crack length) data for precracked fracture specimens. The method allows additional information to be inferred from simple test results, and that information can be used to estimate the failure loads of more complicated structures of the same material and thickness. The fundamentals of the R-curve concept are reviewed first. Then the analytical basis for the estimation method is presented. The estimation method has been verified in two ways. Data from the literature (involving several materials and different types of specimens) are used to show that the estimated R-curve is in good agreement with the measured R-curve. A recent predictive blind round-robin program offers a more crucial test. When the actual failure loads are disclosed, the predictions are found to be in good agreement. Author

DEVELOPMENT AND DESIGN OF AN ADVANCED DIRECTIONAL SHEAR Interim Technical Report
J. Robin and F. Arthur Sep. 1985 49 p
(Contract DAJA45-85-C-0006)
(AD-A159647) Avail: NTIS HC A03/MF A01 CSCL 04/2

A prototype shear apparatus of the type known as a Directional Shear Cell has been designed. The purpose of the prototype is the shearing of undisturbed soil samples at stress levels normal in engineering practice with completely controlled rotation of principal stress directions through 0 deg to 360 deg in the plane of strain. Factors affecting the design are listed and discussed to explain the form of the resulting design. The design is presented in some detail, but without working drawings. Testing will be automatic; stress paths; including undrained and cyclic paths, will be imposed under computer control and boundary strains will be processed automatically. In addition it will be possible to determine strain distributions in samples by either radiography or photography. GRA

ANALYSIS OF ELASTIC-PLASTIC BALL INDENTATION TO MEASURE STRENGTH OF HIGH STRENGTH STEELS Final Technical Report
J. H. Underwood, G. P. OHara, and J. J. Zalinka Aug. 1985 38 p Presented at SEM Spring Conference, Experimental Mechanics, Las Vegas, Nev., 9-13 Jun. 1985
(AD-A159882; AD-E440298; ARLCB-TR-85029) Avail: NTIS HC A03/MF A01 CSCL 11/6

Ball indentation experiments were performed with A723 steel of 1000 to 1200 MPa ultimate strength. Results were compared with conventional tension tests and with an elastic-plastic finite element model of the ball indentation. Finite element analysis showed the ball indentation process to be insensitive to friction effects. Comparison of indentation and conventional tests showed that slip-line field analysis closely predicts the ball contact stress. Indentation tests gave an accurate measure of ultimate tensile strength under the following conditions: using a large ball size and a fixed ratio of indentation depth to ball size; ignoring initial ball contact; accounting for directional material properties; accounting for extraneous system deflections. DEFLECTION IN TAPERED CANTILEVER BEAMS DEFLECTION (GAP OPENING) IN DOUBLE CANTILEVER TYPE FRACTURE TOUGHNESS SPECIMENS Final Technical Report
B. Avitzur Aug. 1985 45 p
(AD-A159887; AD-E440297; ARLCB-TR-85027) Avail: NTIS HC A03/MF A01 CSCL 20/11

When an otherwise homogeneous material under stress contains small defects (i.e., internal cracks and/or voids), the stresses at parts of the material-defect interface significantly exceed the ones anticipated at that location in the absence of such irregularities. Consequently, a structural member, otherwise calculated to safely sustain the applied loads, might unpredictably fail. That branch of engineering which intends to account for such stress-raisers is known as fracture mechanics. Fracture mechanics studies have found that different materials (and even the same material when loaded in different orientations) reflect different sensitivity to such stress-raisers - a material property known as fracture toughness. Test samples and testing procedures have been devised in order to qualify this material property. The relation between the applied load and its displacement (or gap opening) at the point of crack growth is being used herein to determine (compute) material fracture toughness. While the equations derived for the stress field near the edge of a defect in an otherwise uniform field assume an infinite volume of material to surround the (relatively) very small defect, the crack to width and/or height in these laboratory size testing samples is definitely a finite one. This report offers a mathematical relation between the applied load and that part of the deflection (gap opening) which is due to the cantilever-like part of the sample, for that class of fracture toughness test specimens which can be described as double cantilever. A beam theory approach is used. GRA

FINITE ELEMENT MESH FOR A COMPLETE SOLUTION OF A PROBLEM WITH A SINGULARITY
J. G. Malone, P. G. Hodge, Jr., and R. Plunkett Jun. 1985 22 p
(Contract N00014-75-C-0177)
(AD-A159890; AEM-H2-3) Avail: NTIS HC A02/MF A01 CSCL 09/2

The purpose of this paper has been to show that a finite-element method using only constant-strain triangular elements can be used in a problem with a stress singularity to obtain a complete solution for stress, strain, and displacement at and economical cost in computing. The method does not require and a priori knowledge of the nature of the singularity. The result has been acheived by using and easily-generated mesh scheme which is centered at the point of singularity. The particular problem of a plate with a centered crack in a state of plane stress was chosen because and exact analytical solution was available against which to measure the accuracy of our solution. The finite element solution was obtained by using a mesh yields stress and strain field values which are accurate at distances from the crack tip as small as 0.000001 times the crack length using only reasonable number of degrees of freedom. REVIEW OF ULTRASONIC VELOCITY METHODS OF DETERMINING RESIDUAL STRESS
S. J. Rumble and J. G. Sparrow May 1985 22 p

(AD-A160769; AD-E401375; ARL/Struc-TM-416) Avail: NTIS HC A02/MF A01 CSCL 20/11

Residual stress is the stress remaining in a body when all external forces have been removed. Residual stresses can occur as a result of fabrication, assembly, load history, heat treatment or welding. They may be compressive or tensile, and often contribute to the occurrence of component failure. The contribution of these stresses to premature structural failure has long been recognized. However their measurement has usually been difficult and in many cases not possible. Recognition of the benefits of knowing the value of residual stresses has led to recent efforts to improve the capability of known methods of measuring them and to the development of new techniques. The residual stresses in a body can be divided into two classes depending on the extent of the stress. In typical engineering materials, residual microstresses extend over a few grains, whereas residual macrostresses which are most amenable to the practical measurement methods discussed in this paper. It notes that while velocity methods have not been refined to the stage of practical use, they show considerable promise. The theoretical basis, and the experimental techniques of the ultrasonic methods are reviewed with emphasis on the separation of the competing effects of texture and stress on ultrasonic velocity. DYNAMIC ANALYSIS OF SYSTEMS HAVING LARGE DAMPING VARIATIONS

A. J. Philippacopoulos 1985 8 p refs

(TI85-012190; BNL-NUREG-36471) Avail: NTIS HC A02/MF A01

In the earthquake response analysis of structures in which the damping characteristics between the varies significantly the standard mode superposition method cannot be used. Several approximations have been proposed that allow the application of the modal superposition method for cases in which the damping matrix is not orthogonal with respect to the modal shapes. The most commonly used approximation is based on a composite damping value which is employed in the modal equations. This value is a weighted average of the damping values of the individual components of the structural model. An investigation of the errors introduced by the composite damping in the response of simple structures is presented. The results given can be used for benchmarking the approximations in more complex systems for which composite damping solutions are employed. DOE

LIFE EXTENSION OF COMPONENTS WITH HIGH CUMULATIVE FATIGUE USAGE

W. L. Server 1985 9 p

(TI85-014631; EGG-M-16385; CONF-850713-2) Avail: NTIS HC A02/MF A01

The current ASME Boiler and Pressure Vessel Code fatigue design approach has significant margins of safety as evidenced by fatigue data on full-scale vessels. In order to extend qualification (life) of components which have reached the Code design usage limit of unity, improved criteria are needed which address crack initiation and propagation separately such that safe operation of these components is ensured. The fatigue initiation phase is composed of two processes: initial microcracking of internal particles or accumulation of local strain (cyclic slip) creating discontinuities which form microcracks, and the growth of the microcracks in a noncontinuum manner. The microcracks which initiate will eventually grow to a size in which continuum mechanics apply, and fracture mechanics concepts have been employed. The later propagation to failure of a component is also composed of two parts, continuum crack growth in a stable manner and eventual unstable fracture of the remaining ligament of material. This paper reviews the current status of technology in assessing initiation and propagation relative to the current design Code and suggests areas of improvement to cover extended life of high usage factor components. The fluid structural (FS) response of a cylindrical pressure vessel to a suddenly occurring longitudinal through-wall crack is predicted. The effects of vessel internals and depressurization of the compressed water on dynamic crack opening displacements are investigated. A three dimensional structural finite element model is used as a basis for the development of a two dimensional FS model. A slice of the vessel taken at the crack midspan and normal to the cylinder axis is modeled. Crack opening displacements are compared between the 2D and 3D models, between the different assumptions about fluid depressurization, and between the static and dynamic solutions. The results show that effects of dynamic amplification associated with the sudden opening of the crack in the cylinder are largely offset by the local depressurization of the fluid adjacent to the crack. SXRF STUDIES OF BULK CRACK-TIP PLASTIC RELAXATION

J. C. Bilello 1985 3 p refs Presented at the Fundamental Aspects of Fracture, Gatlinburg, Tenn., 4 Nov. 1985

(Contract DE-FG02-84ER-45098)

(DE85-018013; DOE/ER-45098/10; CONF-851104-1) Avail: NTIS HC A02/MF A01

Synchrotron X-ray fractography (SXRF) has been developed as a nondestructive probe of the plastic relaxation zone accompanying bulk fracture in semi-brittle crystals. This method uses white beam synchrotron x-radiation impinging on the cleavage surface of a fractured sample at grazing angle incidence. Topographs are collected in the 2 theta =90(0) with information obtained about the bulk microstructure down to the first extinction depth, i.e., approximately 5 to 10 micrometers below the surface. In comparison with other fractography methods such as, Berg-Barrett topography, optical and Scanning Electron Microscopy, SXRF offers some unique advantages. These include the ability to assess the bulk microstructure associated with crack initiation and propagation coupled with extremely high data collection rates. SXRF data taken at Daresbury, UK, Stanford SSRL and Brookhaven NSLS will be compared with the more conventional fractography methods. DOE

THERMOELASTIC-PLASTIC FLOW IN SOLIDS

D. C. Wallace Jun. 1985 38 p

(Contract W-7405-eng-36)

(DE86-001230; LA-10119) Avail: NTIS HC A03/MF A01

The aim of this monograph is to develop the theory of elastic-plastic flow in solids, with application to a particular class of processes, namely those in which the dissipation of plastic work cannot be neglected. Examples of such processes are high-speed impact phenomena and cratering, shock compression, often shock release as well, and explosive deformation and welding. An important part of the development is to include the anisotropic elastic properties of a solid, and for this reason the theory applies to solids in general. On the other hand, the prototype solid which the author has specifically in mind is metals, and so it is possible that some of the results will have limited validity for nonmetals. The theory is valid in principle for complex flow, compression and/or tension, and unstable flow as well, although the presence and growth of cracks and voids is not explicitly included. A notational conflict arose, because in continuum mechanics the extensive quantities are taken per unit mass, while in thermodynamics they are usually per unit volume. The continuum mechanics normalization is used throughout, with the result that uncommon factors of density show up in the thermodynamic equations. DOE

HIGH STRAIN RATE APPROX.10(6)/s RESPONSE OF 304 STAINLESS STEEL AT VARIOUS STRAINS
K. A. Johnson and K. P. Staudhammer 1985 29 p Presented at the EXPLOMET '85 - International Conference on Metallurgical Applications of Shock Wave and High Strain-Rate Phenomena, Portland, Oreg., 28 Jul. 1985
(Contract W-7405-eng-36)
(DE86-000795; LA-UR-85-3486; CONF-850770-11) Avail: NTIS HC A03/MF A01

The effect of high strain rate at controlled strain levels has been investigated on 304 stainless steel. This study implements a radial shock loading design with a reliable specimen recovery. Strains were measured by plating circle grids on a split anvil design and measured after shock loading. The strain levels were controlled by varying the momentum trap geometries. The shock wave profile impinging and traveling through the specimen as obtained by hydrocode calculations is in fact a shear wave. This shock loading design yields a specimen with a gradient of shock levels up to 1.7 Mbars at a pulse duration of less than one microsecond. The pressure range is achieved nominally independent of the strain level. With this strain pressure independence we were able to study the amount of strain induced (ALPHA)'-martensite generally associated with 304 stainless steel deformation experiments. DOE

Two series of carefully controlled experiments were conducted. First, plots of important crops (corn, soybeans, and sorghum), prairie grasses (big bluestem, switchgrass, tal fescue, orchardgrass, bromegrass), and forage legumes (alfalfa, red clover, and crown vetch) were manipulated to produce wide ranges of phytomass, leaf area index, and canopy architecture. Second, coniferous forest canopies were simulated using small balsam fir trees grown in large pots of soil and arranged systematically on a large (5 m) platform. Rotating the platform produced many new canopies for frequency and spatial averaging of the backscatter signal. In both series of experiments, backscatter of 5.0 GHz (C-Band) was measured as a function of view angle and polarization. Biophysical measurements included leaf area index, fresh and dry phytomass, water content of canopy elements, canopy height, and soil roughness and moisture content. For a subset of the above plots, additional measurements were acquired to exercise microwave backscatter models. These measurements included size and shape of leaves, stems, and fruit and the probability density function of leaf and stem angles. The relationships of the backscattering coefficients and the biophysical properties of the canopies were evaluated using statistical correlations, analysis of variance, and regression analysis. Results from the corn density and balsam fir experiments are discussed and analyses of data from the other experiments are summarized. M.G.

TOWARD A SURFACE SKETCH
J. Ponce and M. Brady Apr. 1985 32 p
(Contracts N00014-80-C-0505; N00014-77-C-0389)
(AD-A159693; AI-M-824) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper reports progress toward the development of a representation of significant surface changes in dense depth maps. The authors call the representation the Surface Primal Sketch by analogy with representations of intensity changes, image structure, and changes in curvature of planar curves. They describe an implemented program that detects, localizes, and symbolically describes: steps, where the surface height function is discontinuous; roofs, where the surface is continuous but the surface normal is discontinuous; smooth joints, where the surface normal is continuous but a principal curvature is discontinuous and changes sign; and shoulders, which consist of two roofs and correspond to a step viewed obliquely. The performance of the program on range maps of objects of varying complexity is illustrated. Author (GRA)

RECURSIVE GRADIENT ESTIMATION USING SPLINES FOR NAVIGATION OF AUTONOMOUS VEHICLES Final Technical Report
C. N. Shen Jul. 1985 44 p Presented at the 2nd Army Conference, Applied Mathematics and Computing, Troy, N.Y., 22-24 May 1984
(AD-A159883; AD-E440295; ARLCB-TR-85022) Avail: NTIS HC A03/MF A01 CSCL 17/7

Terrain gradient estimation is needed for navigation of an autonomous vehicle in climbing the hills. The in-path and cross-path terrain slopes are estimated from the set of corresponding range slopes. A two-dimensional recursive smoothing algorithm using polynomial splines in the third dimension is developed for this purpose. Approximations are introduced in the sub-optimal system so that the computation time increases only linearly with the size of the two-dimensional data. GRA

MILITARY HYDROLOGY. REPORT 8: FEASIBILITY OF UTILIZING SATELLITE AND RADAR DATA IN HYDROLOGIC FORECASTING
B. T. Miers and G. L. Huebner Sep. 1985 69 p
(DA Proj. 4A7-62719-AT-40)
(AD-A160615; WES/MP/EL-79-6-8) Avail: NTIS HC A04/MF A01 CSCL 08/8

The army that has the capability of predicting hydrologic conditions throughout the battlefield area would have a tactical advantage on both offense and defense. Such a capability, though, is dependent on a means for accurately monitoring and forecasting precipitation, the dominant driving element for dynamic hydrologic phenomena such as soil moisture and streamflow. In the context of a tactical environment with its associated constraints, the potential utility of satellites and radars was evaluated. It was concluded that, in the 1980s time frame, only the weather radar can provide rainfall estimates meeting requirements of the military hydrologist. Common components and operational characteristics of existing radar systems are discussed, and a set of general specifications for a tactical weather radar system is included. GRA

IDENTIFICATION AND CHARACTERIZATION OF HYDROLOGIC PROPERTIES OF FRACTURED TUFF USING HYDRAULIC AND TRACER TESTS, TEST WELL USW H-4, YUCCA MOUNTAIN, NYE COUNTY, NEVADA
J. R. Erickson and R. K. Waddell 1985 41 p refs
(Contract DE-AI08-78ET-44802)
(DE85-902212; USGS/WRI-85-4066) Avail: NTIS HC A03/MF A01

Test well USW H-4, located on the eastern edge of Yucca Mountain, Nye County, Nevada, penetrates volcanic tuffs through which water moves primarily along fractures. Data, collected from hydrologic and tracer tests and an acoustic-televiewer log, were used to quantify intrawell-bore flow directions and rates, permeability distribution, fracture porosity, and orientations of the hydraulic-conductivity ellipsoid for the test well. Borehole temperature data collected during a pumping test were used to identify 33 locations at which water was entering the hole. These results correlated well with results from radioactive-tracer surveys and packer tests of isolated intervals. Iodine-131 was used as a tracer under nonpumping conditions to study flow within the borehole, and to identify fractures that produced or accepted water. Water within the borehole was moving down from above and up from below toward the interval between 2500 and 3070 feet. Inflow and outflow were detected in the two most permeable zones in the borehole; however, the nondetection of it in the other test intervals may have resulted from monitoring periods that were too short. In the uppermost permeable zone, water moved down from above 2365 feet and exited the borehole between 2365 to 2375 feet; freshwater entered the borehole between 2380 and 2385 feet and moved downward. The probable shape and orientation of the hydraulic-conductivity ellipsoid were calculated from fracture frequency and orientation data. The plane containing the two larger principal axes of the ellipsoid strikes approximately north 23(0) east and is nearly vertical. These two axes are approximately the same magnitude and are five to seven times larger than the smallest axis. Fracture porosity is about 0.0001 to 0.001, as estimated from the cubic law for hydraulic conductivity of fractures. DOE

GEOLOGIC STRUCTURE OF THE SURFICIAL AQUIFER SYSTEM UNDERLYING EVERGLADES NATIONAL PARK AND BIG CYPRESS NATIONAL PRESERVE Technical Report, 1930 - 1984
M. Jarosewich and J. Wagner Aug. 1985 51 p
(PB85-247609; SFRC-85/02) Avail: NTIS HC A04/MF A01 CSCL 08H

Well logs from 67 existing deep wells in southern Florida were used to determine the stratigraphy, depth, and extent of the Surficial Aquifer System underlying Everglades National park and the Big Cypress National Preserve, Florida. Four geologic cross sections were prepared along well transects within the park and preserve to profile the aquifer system. The profiles reveal considerable heterogeneity in the lithologies but suggest two distinct zones. The premeable upper zone and the more permeable beds of the lower zone were considered to be hydrologically connected; thus, the two zones were treated as comprising a Surficial Aquifer System. Presence of a regionally continuous green clay bed of the lower Tamiami formation was verified, and it was considered the base of the aquifer system. Depth of this bed was determined for the 67 wells, and a contour map of depth of the base of the Surficial Aquifer System was constructed for Dade, Coolier, and northern Monroe counties. ONSITE 40-KILOWATT FUEL CELL POWER PLANT MANUFACTURING AND FIELD TEST PROGRAM Interim Report
Feb. 1985 162 p refs
(Contracts DEN3-255; DE-AI31-80ET-17088)
(NASA-CR-174988; DOE/NASA/0255-1; NAS 1.26:174988; FCR-6868) Avail: NTIS HC A08/MF A01 CSCL 10B

A joint Gas Research Institute and U.S. Department of Energy Program was initiated in 1982 to evaluate the use of fuel cell power systems for on-site energy service. Forty-six 40 kW fuel cell power plants were manufactured at the United Technologies Corporation facility in South Windsor, Connecticut, and are being delivered to host utilities and other program participants in the United States and Japan for field testing. The construction of the 46 fully-integrated power plants was completed in January 1985 within the constraints of the contract plan. The program has provided significant experience in the manufacture, acceptance testing, deployment, and support of on-site fuel cell systems. Initial field test results also show that these experimental power plants meet the performance and environmental requirements of a commercial specification. This Interim Report encompasses the design and manufacturing phases of the 40 kW Power Plant Manufacturing and Field Test program. The contract between UTC and NASA also provides UTC field engineering support to the host utilities, training programs and associated manuals for utility operating and maintenance personnel, spare parts support for a defined test period, and testing at UTC of a power plant made available from a preceding program phase. These activities are ongoing and will be reported subsequently. Author

DEVELOPMENT AND TESTING OF TIP DEVICES FOR HORIZONTAL AXIS WIND TURBINES Final Report
G. W. Gyatt and P. B. S. Lissaman May 1985 86 p refs
(Contracts DEN3-341; DE-AI01-76ET-20320)
(NASA-CR-174991; DOE/NASA/0341-1; NAS 1.26:174991; AV-FR-85/802) Avail: NTIS HC A05/MF A01 CSCL 10A

A theoretical and field experimental program has been carried out to investigate the use of tip devices on horizontal axis wind turbine rotors. The objective was to improve performance by the reduction of tip losses. While power output can always be increased by a simple radial tip extension, such a modification also results in an increased gale load both because of the extra projected area and longer moment arm. Tip devices have the potential to increase power output without such a structural penalty. A vortex lattice computer model was used to optimize three basic tip configuration types for a 25 kW stall limited commercial wind turbine. The types were a change in tip planform, and a single-element and double-element nonplanar tip extension (winglets). A complete data acquisition system was developed which recorded three wind speed components, ambient pressure, temperature, and turbine output. The system operated unattended and could perform real-time processing of the data, displaying the measured power curve as data accumulated in either a bin sort mode or polynomial curve fit. Approximately 270 hr of perormance data were collected over a three-month period. The sampling interval was 2.4 sec; thrus over 400,000 raw data points were logged. Results for each of the three new tip devices, compared with the original tip, showed a small decrease (of the order of 1 kW) in power output over the measured range of wind speeds from cut-in at about 4 m/s to over 20 m/s, well into the stall limiting region. Changes in orientation and angle-of-attack of the winglets were not made. For aircraft wing tip devices, favorable tip shapes have been reported and it is likely that the tip devices tested in this program did not improve rotor performance because they were not optimally adjusted. MOD-2 WIND TURBINE FIELD OPERATIONS EXPERIMENT Final Report
Larry H. Gordon Dec. 1985 17 p refs
(Contract DE-AI01-76ET-20320)
(NASA-TM-87233; DOE/NASA/20320-69; E-2901; NAS 1.15:87233) Avail: NTIS HC A02/MF A01 CSCL 10A

The three-machine, 7.5 MW Goodnoe Hills located near Goldendale, Washington and is now in a research/experimental operations phase that offers a unique opportunity to study the effects of single and multiple wind turbines interacting with each other, the power grid; and the environment. Following a brief description of the turbine and project history, this paper addresses major problem areas and research and development test results. Field operations, both routine and nonroutine, are discussed. Routine operation to date has produced over 13,379,000 KWh of electrical energy during 11,064 hr of rotation. Nonroutine operation includes suspended activities caused by a crack in the low speed shaft that necessitated a redesign and reinstallation of this assembly on all three turbines. With the world's largest cluster back in full operation, two of the turbines will be operated over the next years to determine their value as energy producer. The third unit will be used primarily for conducting research tests

requiring configuration changes to better understand the wind turbine technology. Technical areas summarized pertain to system performance and enhancements. Specific research tests relating to acoustics, TV interference, and wake effects conclude the paper. Author

SUMMARY OF TOWER DESIGNS FOR LARGE HORIZONTAL AXIS WIND TURBINES
G. R. Frederick (Toledo Univ., Ohio) and J. M. Savino 1986 21 p refs Presented at the Energy-Source Technology Conference and Exhibition, New Orleans, Louisiana, 23-27 Feb. 1986; sponsored by the American Society of Mechanical Engineers
(NASA-TM-87166; E-2803; DOE/NASA/20320-68; NAS 1.15:87166) Avail: NTIS HC A02/MF A01 CSCL 10A

Towers for large horizontal axis wind turbines, machines with a rotor axis height above 30 meters and rated at more than 500 kW, have varied in configuration, materials of construction, type of construction, height, and stiffness. For example, the U.S. large HAWTs have utilized steel truss type towers and free-standing steel cylindrical towers. In Europe, the trend has been to use only free-standing and guyed cylindrical towers, but both steel and reinforced concrete have been used as materials of construction. These variations in materials of construction and type of construction reflect different engineering approaches to the design of cost effective towers for large HAWTs. Tower designs are the NASA/DOE Mod-5B presently being fabricated. Design goals and requirements that influence tower configuration, height and materials are discussed. In particular, experiences with United States large wind turbine towers are elucidated. Finally, current trends in tower designs for large HAWTs are highlighted. Author

SOLAR SIMULATION LABORATORY DESCRIPTION AND MANUAL M.S. Thesis
K. T. Mabie Jun. 1985 66 p
(AD-A159729; NPS67-85-006) Avail: NTIS HC A04/MF A01 CSCL 10/2

This research project consisted of writing a manual for testing solar cells. It was written for students in the Space Operations and Space Engineering curricula at the Naval Postrgraduate School. A location was selected and equipment was purchased for the construction. The manual begins with a introduction to solar cell theory. The individual components of the solar power laboratory are discussed in detail and their integration into a system is described. The system was designed for automated data acquisition. An IBM PC/XT is the central point of the system. Two computer programs written in IBM BASIC are included for the user with a complete discussion of each. GRA

N86-18779# National Bureau of Standards, Gaithersburg, Md. Polymers Div.
POLYMER ELECTROLYTE BASED ON POLY(ETHYLENE IMINE) AND LITHIUM SALTS
C. K. Chiang, G. T. Davis, C. A. Harding, and T. Takahashi 1 Oct. 1985 16 p
(Contract N00014-85-F-0022)
(AD-A160381; TR-3) Avail: NTIS HC A02/MF A01 CSCL 07/4

The dissolution of lithium salts in linear poly(ethylene imine) has been investigated because of its possible role as a solid electrolyte in lithium batteries. Lithium salts included in the study are LiF, LiCl, LiBr, LiI, LiSCN, LiCl104 and LiBF4. When cast from solution in a common solvent, a uniform mixture is obtained (expect for the case of LiF). Interaction of the salt and polymer can be characterized by observing a loss in crystallinity of the polymer and an increase in the glass transition temperature. At concentrations of salt below 10 mole percent, the polymer can slowly recrystallize at room temperature, but at higher concentrations the mixture remains amorphous for an indefinite period of time. DC conductivity at room temperature is about .0000001 S/cm but increases to .001 S/cm at 150 C. Author (GRA)

EVALUATION OF ADVANCED DESIGN CONCEPTS FOR ABSORPTION HEAT PUMPS
Floyd C. Hayes and Robert J. Modahl 1984 14 p Conference held at appropriate place and time
(DE85-005090; CONF-841231-9) Avail: NTIS HC A02/MF A01

The status of an advanced absorption heat pump program is presented. The evaluation, development, and proof testing of advanced absorption refrigeration cycles which are applicable to residential and commercial space conditioning systems is reviewed. Phase 1 of the program involved the analytical evaluation of cycles and fluids, and the selection of a preferred concept for breadboard demonstration is Phase 2. Direct firing with natural gas, and working fluids whose properties are reasonably well known were tested. Target COP's were 1.6 at 47 F and 1.2 at 17 F in the heating mode, and 0.7 at 95 F in the cooling mode. Including the effect of flue losses. An air cooled system for commercial applications was studied. DOE

PRELIMINARY CONSIDERATIONS FOR EXTRACTION OF THERMAL EFFECT FROM MAGMA
C. E. Hickox and J. C. Dunn 1985 7 p refs
(Contract DE-AC04-76DF-00789)
(DE85-009341; SAND-85-0650C) Avail: NTIS HC A02/MF A01

Simplified mathematical models are developed to describe the extraction of thermal energy from magma based on the concept of a counter-flow heat exchanger inserted into the magma body. Analytical solutions are used to investigate influence of the basic variables on electric power production. Calculations confirm that the proper heat exchanger flow path is down the annulus with hot fluid returning to the surface through the central core. The core must be insulated from the annulus to achieve acceptable wellhead temperatures, but this insulation thickness can be quite small. The insulation is effective in maintaining the colder annular flow below expected formation temperatures so that a net beat gain from the formation above a magma body is predicted. The analynes show that optimum flow rates exist that maximize electric power production. These optimum flow rates are functions of the heat transfer coefficients that describe magma energy extraction. Author

THE PERFORMANCE OF A RESIDENTIAL HEAT PUMP OPERATING WITH A NONAZEOTROPIC BINARY REFRIGERANT MIXTURE Interim Report
David Didion and William Mulroy 1984 8 p refs Presented at a conference
(DE85-005245; CONF-841231-16) Avail: NTIS HC A02/MF A01

Results of laboratory measurement of the performance change of a substantially unmodified residential heat pump designed for

222 when charged with a non azeotropic, binary mixture of R1381 and R152a is presented. Results are presented for various sizes of fixed expansion devices. The effect of gliding temperature in the saturation zone was found to be small. The effect of compositions shift by flash distillation in the accumulator was found to measurably improve low temperature heating performance. It was further observed that some system modification (such as the addition of a receiver) could have further enhanced this low temperature heating performance improvement. DOE

DUAL-STROKE HEAT PUMP FIELD PERFORMANCE
S. E. Veyo 1984 11 p Conference held at appropriate time and place
(DE85-005247; CONF-841231-12) Avail: NTIS HC A02/MF A01

Two nearly identical proprototype systems, each employing a unique dual-stroke compressor, were built and tested. One was installed in an occupied residence in Jeannette, Pa. It has provided the heating and cooling required from that time to the present. The system has functioned without failure of any prototypical advanced components, although early field experience did suffer from deficiencies in the software for the breadboard micro processor control system. Analysis of field performance data indicates a heating performance factor (HSPF) of 8.13 Stu/Wa, and a cooling energy efficiency (SEER) of 8.35 Scu/Wh. Data indicate that the beat pump is oversized for the test house since the observed lower balance point is 3 F whereas 17 F La optimum. Oversizing coupled with the use of resistance heat ot maintain delivered air temperature warmer than 90 F results in the consumption of more resistance heat than expected, more unit cycling, and therefore lower than expected energy efficiency. Our analysis indicates that with optimal mixing the dual stroke heat pump will yield as HSFF 30% better than a single capacity heat pump representative of high efficiency units in the market place today for the obeerved weather profile. NEW YORK STATE POLICE REMOTE COMMUNICATIONS SITE SMALL WIND ENERGY CONVERSION SYSTEM Final Report
Mar. 1985 21 p
(TI85-901683; NYSERDA-85-3; Rept-515-RIER-RER-83) Avail: NTIS HC A02/MF A01

This report concludes a year-long demonstration and study of the use of a North Wind Model HR2 wind energy conversion aystem to supply the power for a remote New York State Police microwave repeater site at Mt. Morris in the Adiroundack Mountains. Data were collected on a multi-channel digital strip chart recorder which provided a printout of the real-time relation between windspeed, power output, battery capacity and voltage, and contribution from backup power. These data proved that the site could be run on wind power alone and predictions can now be made on the performance of an HR2 or similar wind system at other sites. DOE

RESEARCH PROGRESS IN THE DOE/SERI AMORPHOUS SILICON RESEARCH PROJECT
E. Sabisky, W. Wallace, B. Stafford, K. Sadion, and W. Luft Apr. 1985 8 p
(DE85-006796; SERI/RR-211-2707) Avail: NTIS
HC A02/MF A01

The Amorphous Silicon Research Project (ASRP), established at the Solar Energy Research Institute (SERI) in 1983, is responsible for all USDOE government-supported research activities in the field of amorphous silicon photovoltaics. The objectives and research directions of the project have been established by a Five-Year Research Plan developed at SERI in cooperation with the Department of Energy in 1984. In order to accomplish project goals, research is performed by a combination of: (1) multi-year programs consisting of multi-disciplinary research teams based on strong government/industry partnerships: and (2) basic research performed in university, government, and industrial laboratories. A summary of recent research progress in the ASRP program is presented. DOE

AMORPHOUS SILICON CONCEPTUAL MODULE DESIGN AND COST ESTIMATE
L. Mrig and B. Jackson Aug. 1985 86 p
(Contract DE-AC02-83CH-10093)
(DE85-012177; SERI/RR-216-2668) Avail: NTIS
HC A05/MF A01

A 10% efficient, amorphous silicon module of monolithic construction was conceptualized and costed. The design study successfully defined a module structure amenable to large-scale structures. Narrow, series-connected cells deposited on 4-ft(2) glass substrates and running the width of the module were consistent with material design constraints and module operating requirements. Series connections were made by a thin film of metal on the back of each cell and a transparent conductive oxide (TCO) film on the front. In a laser scribing study, spectral analyses were made to determine the best wavelengths of light to use in scribing TCO, while minimizing the impact on the glass substrate. Relatively thin scribing widths were possible at speeds consistent with commercial production schedules. Each step in module production was described in terms of the parameters that determine costs, assuming a 200-MW/y facility in 1995. Results indicate that with continued government support photovoltaic research, the outlook is excellent for low module production costs based on current conceptual designs. DOE

STATUS OF THE LIGHT-INDUCED EFFECT IN AMORPHOUS SILICON MATERIAL AND IN a-Si SOLAR CELLS
E. S. Sabisky Sep. 1985 36 p
(Contract DE-AC02-83CH-10093)
(DE85-016857; SERI/RR-211-2800) Avail: NTIS HC A03/MF A01

This report contains a description of the status of research on the light-induced change that occurs in hydrogenated amorphous silicon solar cells and material (the Staebler-Wronski effect). We can observe this effect in solar cells made of a-Si material when cell efficiency drops rapidly in the initial stage of optical exposure and then exhibits a much slower decay or no subsequent change. Because long-term stability is one of the primary parameters that impact the application options open to photovoltaic systems, the light-induced effect must be resolved. It may be possible to develop device structures that will minimize this effect. DOE

SP-100 LOW MASS SHIELD DESIGN
D. E. Carlson 1985 10 p Presented at the 2nd SP-100 Program Integration Meeting, Denver, Colo., 17 Sep. 1985
(Contract W-7405-eng-36)
(DE86-000787; LA-UR-85-3140; CONF-8509153-5) Avail: NTIS HC A02/MF A01

The shielding considerations for an unmanned space reactor system are somewhat different from those for a terrestrial reactor. An unmanned operation in space implies that only a shadow shield, rather than a 4(PI) one, is required to protect payload hardware that typically can tolerate 10(4) to 10(6) times more radiation than can a human crew. On the other hand, the system mass, of which the radiation shield can be a significant fraction, is a severe constraint for space reactors and not normally a problem with terrestrial ones. The object of this paper is to briefly summarize advancements made on various aspects of low mass shield design for space reactors, including materials and their arrangements, geometric factors and their potential impact on system design optimization, and proposed new configuration concepts for further mass reduction. DOE

ANTIREFLECTION COATINGS FOR PLANAR SILICON SOLAR CELLS
G. E. Jellison, Jr. and R. F. Wood Sep. 1985 216 p
(Contract DE-AC05-84OR-21400)
(DE86-001428; ORNL/TM-9717) Avail: NTIS HC A10/MF A01

Calculations are presented for the effect of various antireflection coatings on silicon solar cells. In particular, the relationship of different quantum efficiencies and illumination spectra to the optimum film thickness(es) and to the maximum collectible current is examined. It is found that the ratio of the collectible current to the maximum possible current (with the reflectivity = 0 over the entire solar spectrum) is larger if the solar cell has a poor spectral quantum efficiency and/or the illumination spectrum is peaked (such as from an ELH lamp). Single- and double-layer coatings are examined, and it is found that the double-layer coatings are less sensitive to errors in the coating thicknesses, as well as yielding more collectible current. A series of tables of optimum thicknesses, curvatures, and maximum fractions of collectible currents can be found in the appendix. DOE

DESIGN METHOD FOR THE CALCULATION OF PERFORMANCES AND FLAP MOVEMENT OF FLEXIBLE WIND TURBINE BLADES [ONTWERPMETHODE VOOR DE BEREKENING VAN PRESTATIES EN KLAPBEWEGING VAN FLEXIBELE WINDTURBINEBLADEN]
Th. vanHolten and J. L. Kooman Feb. 1983 42 p refs In DUTCH
(VTH-M-453) Avail: NTIS HC A03/MF A01

Performances, flap movements and loads of so-called flexible wind turbine blade were calculated in cases of right flow, flow with a velocity gradient, and oblique flow. The helicopter rotor based calculation method is simplified, and proves useful for first design estimates. The blades are schematized into intransformable blades attached to the hub using hinges with a spring stiffness such that the rotating natural frequency of the model blade flap movement is equal to the real blade natural frequency. Author (ESA)

OUTPUT CALCULATIONS OF THE GIROMILL WIND TURBINE [OPBRENGSTBEREKENINGEN GIROMILL-WINDTURBINE]
G. J. W. vanBussel Sep. 1983 29 p refs In DUTCH
(VTH-M-484) Avail: NTIS HC A03/MF A01

Based on test data from a wind turbine test field, the performance of a three bladed vertical axis wind turbine with a cyclic blade angle adjustment was calculated. The effect of the replacement of a 1000 rpm generator by a 750 rpm generator on the output of an erected turbine, is calculated. The modification is considered to reduce vibration. The effect of revolving variations on the output is examined. The losses of power are high. An increase of power seems possible if design modifications, such as the switching-off of the adjustment mechanism during normal operation, are carried out. Author (ESA)

THE OPTICAL CONSTANTS OF SMOKE MATERIALS (NATURALLY OCCURRING MINERALS) PLUS IRON AND GRAPHITE IN THE MILLIMETER AND SUBMILLIMETER Contractor Report May 1982 - May 1984
R. J. Bell, R. W. Alexander, Jr., L. L. Long, M. A. Ordal, and R. Paul Sep. 1985 103 p
(Contract DAAK11-82-C-0052)
(AD-A160614; CRDC-CR-85057) Avail: NTIS HC A06/MF A01 CSCL 08/7

Optical constants were measured for seven minerals from 20 to 400 cm (to the minus 1 power). These data were combined with those of Dr. Querry from the University of Missouri-Kansas City to cover the 20 to 4000 cm (to the minus 1 power) range. Such optical constants are needed to calculate the transmission in the millimeter and submillimeter of soil aerosols in the atmosphere and to assess the value of soil aerosols as obscurants. These optical constants were obtained by Kramers-Kronig analysis of reflectance spectra of pressed powder pellets. The optical constants of iron, aluminum and graphite were obtained from reflectance spectra measured in our laboratory and that of Dr. Querry to cover the region from 20 cm (to the minus 1 power to 20,000 cm (to the minus 1 power). Literature values were tabulated for 10 additional metals. These optical constants are needed for evaluation of metallic chaffs and powders as obscurants. Other techniques for measuring optical constants of metals in the millimeter and submillimeter were evaluated. GRA

SUITABILITY OF POLYVINYL CHLORIDE PIPE FOR MONITORING TNT, RDX, HMX, AND DNT IN GROUNDWATER
L. V. Parker, T. F. Jenkins, and B. T. Foley Aug. 1985 32 p
(AD-A160733; CRREL-SP-85-12; AMXTH-TE-TR-85037) Avail: NTIS HC A03/MF A01 CSCL 13/2

A number of samples of commercial PVC groundwater monitoring pipe, which varied in schedule, diameter or manufacturer, were placed in contact with low concentrations of aqueous solutions of TNT, RDX, HMX and 2,4-DNT for 80 days under nonsterile conditions. Results indicated that there was some loss of TNT and HMX in the presence of PVC pipe compared to glass controls but that for the most part concentrations of analyte were equivalent between types of pipe. A second experiment was performed to determine if the losses were due solely to sorption or if biodegradation was also a factor. This experiment was done under a variety of groundwater conditions by varying salinity, initial pH and dissolved oxygen. The only case where there was increased loss of any substance because of the presence of PVC pipe was in the TNT solution under nonsterile conditions. This increased loss was thought to be associated with increased microbial degradation rather than sorption. Therefore, given the length of time of this experiment and the small amount of loss attributable to sorption, PVC groundwater monitoring pipe is acceptable for monitoring groundwater for these munitions. Several samples of PVC pipe were also leached with groundwater for 80 days and no detectable interferences were found by reversed phase HPLC analysis. GRA

ECOLOGICAL-EVALUATION OF ORGANOTIN-CONTAMINATED SEDIMENT Final Report, Mar. - Jun. 1984
M. H. Salazar and S. M. Salazar Jul. 1985 25 p
(AD-A160748; NOSC/TR-1050) Avail: NTIS HC A02/MF A01 CSCL 06/6

A standard dredged material bioassay was conducted with high levels of organotins to assess the toxicity and bioavailability of organotins associated with sediment and to determine if this sediment would qualify for ocean disposal. This study concluded that high levels of organotins in sediments do not a priori indicate a significant adverse impact on the marine environment after ocean disposal. The sediment tested would qualify for ocean disposal under the present guidelines administered by the Environmental Protection Agency and the Army Corps of Engineers. Particulate-phase tests were conducted with Acanthomysis sculpta (mysid), Citharichthys stigmaeus (flatfish), and Acartia tonsa (copepod). Solid-phase tests were conducted with A. sculpta, Macoma nasuta (clam), and Neanthes arenaceodentata (polychaete worm). The bioassay also included an estimate of the potential for bioaccumulation of cadmium, chromium, copper, mercury, silver, pesticides, PCBs, petroleum hydrocarbons, and organotins. Survival was high in all particulate-phase and solid-phase tests. GRA

METHYLENE CHLORIDE SAMPLING WITH PASSIVE DOSIMETERS UNDER STEADY-STATE AND TRANSIENT CONDITIONS M.S. Thesis
F. B. Liebhaber, Jr. 1985 86 p
(AD-A160794; AFIT/CI/NR-85-130T) Avail: NTIS HC A05/MF A01 CSCL 06/9

This thesis investigates the application of passive charcoal dosimeters to monitor concentrations of methylene chloride vapors. Monitoring the workplace air for methylene chloride vapors requires the collection of air samples in the worker's breathing zone during the work day. The work day exposure usually fluctuates and the air samples must be integrated over periods of several hours or more. This sample integration determines the time-weighted average (TWA) concentration. TWA exposures assist the industrial hygienist in assessing the healthfulness of the occupational environment and are used for compliance purposes by comparison with established 8-hour time-weighted average standards. This study examined the methylene chloride sampling and retention abilities of passive dosimeters and their subsequent TWA determinations. To evaluate their performance, three commercially available dosimeters were exposed to known concentration profiles of methylene chloride. This comparison was done under laboratory conditions to minimize the differences in actual badge exposure. There are five hypotheses to be tested. Each hypotheses tests the central issue: passive dosimetry is an accurate method to sample fluctuating occupational exposures to methylene chloride. GRA

N86-18801# Naval Ocean Systems Center, San Diego, Calif.
TOXICITY OF AQUEOUS FILMFORMING FOAMS TO MARINE ORGANISMS: LITERATURE REVIEW AND BIOLOGICAL ASSESSMENT Final Report, period ending Oct. 1982
S. M. Salazar Jul. 1985 41 p
(AD-A160874; NOSC/TD-825) Avail: NTIS HC A03/MF A01 CSCL 06/6

This document summarized information from literature regarding the toxicity of aqueous filmforming foams (AFFF) and presents results of supplementary toxicity tests using AFFF and appropriate marine organisms. Aqueous filmforming foams (AFFF) are used regularly by the Air Force and Navy in training exercises at fire-fighting schools and, when necessary, for fuel/oil fire control aboard ship. The AFFFs are a combination of fluorocarbons, surfactants, and solubilizers. The usage of AFFF and the disposal of AFFF-laden wastewater have the potential for an adverse impact on the environment. The results of this study suggests that the dispersion of AFFF agents in the marine environment should not have a significant impact on marine life. Dilution of the 6-percent solution used for fire-fighting operations by wave and tidal activity results in concentrations that can be considered mildly toxic or nontoxic to marine life. The FC-78oB AFFF is not toxic to the marine algo Dunaliella at concentrations up to 4.0 gm/liter. The estimated 96-hour LC50 for brine shrimp, Artemia salina, is between 4.0 and 6.0 gm/liter. These LC50 concentrations are in the range of those reported for other marine and freshwater organisms. GRA

PRACTICAL ASPECTS OF MEASURING DRY DEPOSITION
M. L. Wesely and B. B. Hicks 1985 6 p refs Presented at the

PA/USGS/EPRI Workshop on Acid Deposition Monitoring and nalysis, Raleigh, N.C., 30 Apr. 1985 Prepared in cooperation ith National Oceanic and Atmospheric Administration, Oak Ridge, enn.
Contract W-31-109-eng-38)
DE85-018465; CONF-8504158-2) Avail: NTIS HC A02/MF A01

The dry deposition of atmospheric trace substances is the ransfer of substances to the surface of the earth by all processes xcluding those aided directly by precipitation. These include the ertical turbulent transfer of trace gases and fine particles and he gravitational settling of large particles in the lower atmosphere. To address the dry deposition of acidic substances, we need to consider the major sulfur and nitrogen substances, which include SO2, HNO3 vapor, NO2, particulate sulfate, and particulate nitrate. Others often considered are NO, PAN, and organic sulfates. Ozone should be added to this list because it is a substance that is often linked to harmful effects on surface vegetation and materials, and its effects are frequently intermingled with effects of airborne sulfur and nitrogen substances. Here, our discussion will be confined mainly to SO2, HNO3, NO2, particulate sulfur, particulate nitrate and O3. These contaminants do not include all substances of general importance in evaluating acid deposition, because the numerous substances involved in chemical transformations that modify the acidic chemical species before being deposited are not addressed. DOE

DISPERSION EXPERIMENTS USING SHORT-TERM RELEASES OF AN ATMOSPHERIC TRACER
A. H. Weber and R. J. Kurzeja 1985 13 p refs Presented at the 7th Symposium on Turbulence and Diffusion of the AMS, Boulder, Colo., 12 Nov. 1985
(Contract DE-AC09-76SR-00001)
(DE85-018519; DP-MS-85-40; CONF-851177-4) Avail: NTIS HC A02/MF A01

The Mesoscale Atmospheric Transport Studies (MATS) experiments were undertaken to provide a data base for determining the accuracy of mesoscale atmospheric dispersion model predictions for short term releases. This paper describes the MATS experiments and compares observed dispersion parameters with theory. The movement of the sulfur hexaflouride cloud has been compared with wind sensors placed at several different elevations. The observed sigma-y values are also compared with theory and found to agree well with Pasquill's (1976) method. The aim in the MATS experiments has been to achieve as many scientific goals as possible while answering the fundamental question of model accuracy. The MATS experiments provide information on cros: wind and downwind spread of material. The horizontal spread is obtained by a crosswind system of samplers and downwind spread can be determined by using several arcs. Unfortunately, budget considerations restricted the sampling to a single arc at about 30 km downwind from the release point. Despite this limitation, downwind dispersion results were obtained by collecting a sequence of continuous, relatively-short-time-samples as the plume moved downwind. It was assumed that the structure of the plume changed slowly as it moved across the sampling arc. DOE

DEVELOPMENT OF COMBINED NITROGEN OXIDE/SULFUR OXIDE ENVIRONMENTAL-CONTROL TECHNOLOGY
J. B. L. Harkness and R. D. Doctor 23 Aug. 1985 80 p
(Contract W-31-109-eng-38)
(DE86-001301; ANL/ECT-14) Avail: NTIS HC A05/MF A01

Using a statistically designed series of batch experiments, we investigated simultaneous desulfurization and denitrification of flue gas from coal-fired boilers. Our results were consistent with mechanisms in which NO (nitrogen monoxide) and NO2 (nitrogen dioxide) are coscrubbed as HNO2 (nitrous acid), which reacts with SO2 (sulfur dioxide) as [HSO3(-)] (the bisulfite ion) to form hydroxylamine-N-sulfonates. Significant pathways for aqueous-phase denitrification were available at pH values between 4 and 9, with an optimum at a pH value of 6.9. This report shows how these mechanisms operated in a variety of scrubber technologies, so that successful control strategies can be developed. Four desulfurization chemistries were ranked in terms of their denitrification potential, in the following order: double-alkali > citrate > Dowa. A synthetic flue gas containing nitrogen blended with carbon dioxide (14.5%), oxygen (5.1%), SO2 (1500 or 3000 ppM), NO (475 or 450 ppM), NO2 (25 or 50 ppM), and water vapor (8%) was fed at 100 L/min (standard) to a 3.6-L batch sparger. Additives investigated included FeSO4 (ferrous sulfate), Fe(II)EDTA, Cu(II)EDTA, Fe(II)NTA, Fe(OH)2 (ferrous hydroxide), NH4OH (ammonium hydroxide), and N2H4 (hydrazine), where EDTA signifies ethylenediaminetetraacetic acid and NTA signifies nitrilotriacetic acid. Of these additives, Fe(II)EDTA performed best as an enhancer of NO sub x (nitrogen oxides) removal. DOE

DEVELOPMENT OF A ROOM AIR MONITOR SYSTEM AND WORKPLACE TRANSURANIC AEROSOL MEASUREMENT SYSTEM
W. H. Tyree and D. Balmer Aug. 1985 15 p
(Contract DE-AC04-76DP-03533)
(DE86-001563; RFP-3882) Avail: NTIS HC A02/MF A01

The design of the room air monitor consists of a filter medium housed in a separate fixture connected directly to a vacuum system. A 1700 mm(2) detector is housed in front of the filter medium to detect the presence of alpha particles emitted from the material collected by the filter medium. Several versions of the system have been built and used in production areas at the Rocky Flats Plant. A Workplace Transuranic Aerosol Measurement System with improved sensitivity for stack monitoring is also reported. The tasks for the development of these two systems are listed, and cost estimates and tentative schedules are summarized. Drawings illustrating these systems are also given. DOE

MICROBIAL DEGRADATAION OF OIL IN THE MARINE ENVIRONMENT
Anders Edlund, Anders Norqvist, Roger Roffey, and Sten-Aake Fredriksson Jul. 1985 35 p refs In SWEDISH; ENGLISH summary Sponsored by Swedish National Board for Technical Development
(FOA-C-40219-B4; ISSN-0347-2124) Avail: NTIS HC A03/MF A01; Research Institute of National Defence, Stockholm KR 50

Microbial degradation of Arabian light crude and fuel oils No 1 and 5 was studied during 1 yr on a beach. Weathered oils were spread out on field plots and nitrogen and phosphorus compounds were added to part of the plots. The rate of degradation as measured with gas chromatographic analyses on plots where nutrients were added shows that a considerable amount of saturates are degraded after 30 days. After 1 yr an almost complete degradation of saturates and aromatics is observed on plots supplied with nutrients, but accumulation of hard to split aromatic fractions in oil No. 1 is noted. Laboratory tests show a fourfold

increase of biodegradation in water samples when nutrients are added. Author (ESA)

RADIATIVE FLUX PARAMETERIZATIONS IN A BOUNDARY LAYER MODEL
Sergio Henrique Franchito, Nelson Arai, and Jose Paulo Bonatti Sep. 1985 34 p refs
(INPE-3647-RPE/484) Avail: NTIS HC A03/MF A01

Software for atmospheric radiative heating and cooling using the parameterization of Kuo and Qian was developed. This parameterization was introduced in a simple planetary boundary layer model, substituting the Brunt's and Chang's parameterization for long and short wave radiation, respectively, in the first version of the model. Experiments using both parameterizations are made and the results seem to be in a good agreement with real data. Author

AIRGLOW O2(1 SIGMA) ATMOSPHERIC BAND AT 8645 ANGSTROM AND THE ROTATIONAL TEMPERATURE OBSERVED AT 23 DEG S
H. Takahashi, Y. Sahai, and P. P. Batista Sep. 1985 21 p refs Sponsored in part by Fundo Nacional de Desenvolvimento Cientifico e Tecnologico
(INPE-3631-PRE/811) Avail: NTIS HC A02/MF A01

Regular observations of the O2(1 sigma, 0-1) atmospheric band at 864A (O2S(0,1)) and the rotational temperature, together with the OH(94,4) band and OI 5577A airglow emissions, using multichannel tilting filter type photometers, have been carried out at Cachoeira Paulista (22.7 deg S, 45.0 deg W), Brasil, since February 1983. The O2(0,1) band intensities occasionally vary from 200 to 1000 Rayleighs during a night. Covariations in nocturnal and seasonal variation with the OI 5577A emission were observed. The temperatures determined from the P branch of the O2A(0,1) band vary between 180 K and 230 K. The amplitude of the nocturnal temperature variation is sometimes larger than that determined from the OH emission, and the phase of the variation, on some occasions, leads that of the OH. Author

DISLOCATION MODEL FOR ASEISMIC FAULT SLIP IN THE TRANSVERSE RANGES OF SOUTHERN CALIFORNIA
Abe Cheng, David D. Jackson, and Mitsuhiro Matsuura (Tokyo Univ., Japan) [1985] 36 p refs
(Grant NAG5-447)
(NASA-CR-176493; NAS 1.26:176493) Avail: NTIS HC A03/MF A01 CSCL 08G

Geodetic data at a plate boundary can reveal the pattern of subsurface displacements that accompany plate motion. These displacements are modelled as the sum of rigid block motion and the elastic effects of frictional interaction between blocks. The frictional interactions are represented by uniform dislocation on each of several rectangular fault patches. The block velocities and fault parameters are then estimated from geodetic data. Bayesian inversion procedure employs prior estimates based on geological and seismological data. The method is applied to the Transverse Ranges, using prior geological and seismological data and geodetic data from the USGS trilateration networks. Geodetic data imply a displacement rate of about 20 mm/yr across the San Andreas Fault, while the geologic estimates exceed 30 mm/yr. The prior model and the final estimates both imply about 10 mm/yr crustal shortening normal to the trend of the San Andreas Fault. Aseismic fault motion is a major contributor to plate motion. The geodetic data can help to identify faults that are suffering rapid stress accumulation; in the Transverse Ranges those faults are the San Andreas and the Santa Susana. Author

LARGE-SCALE STRUCTURE OF THE MIDDLE ATMOSPHERE DURING THE WINTER 1983/84
K. Petzoldt *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 33-39 refs (For primary document see N86-18811 09-46)
(Contract DFG-La-372/13-2)
Avail: NTIS HC A18/MF A01

The circulation of the stratosphere and mesosphere in the winter 83/84 is shown as an example of the dynamical processes which lead to the fluctuations in the middle atmosphere over high latitudes. Winds and temperatures measured by rockets, radiosondes, and satellites during the MAP/WINE campaign are combined. The coupling of the atmosphere over high latitudes with the transient planetary waves over middle and low latitudes can be seen by the flux of wave activity. The connected eddy heat and momentum transports are essential for the interaction with the mean zonal wind. Author (ESA)

THE MIDDLE ATMOSPHERE ABOVE ANDOYA NORWAY DURING THE WINTER 1983/84 AS DERIVED FROM METROCKETS AND OH NIGHTGLOW OBSERVATIONS
W. Meyer (Bonn Univ., West Germany), R. Gerndt (Wuppertal Univ., West Germany), C. R. Philbrick (Air Force Geophysics Lab., Hanscom AFB, Mass.), and F. J. Schmidlin *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 41-47 refs (For primary document see N86-18811 09-46)
(Grants BMFT-WRK-0275; DFG-Za-83/2; DFG-Of-12/1)
Avail: NTIS HC A18/MF A01

A total of 110 wind measurements were performed in the middle atmosphere above Andoya (69N, 16E) during the MAP/WINE Campaign from December 2, 1983 to February 23, 1984 using 57 inflatable passive falling spheres, 33 datasondes, 18 foil clouds and 2 instrumented active spheres. Temperature profiles were derived from 42 falling spheres, 26 datasondes and 2 active spheres. Near-mesopause temperatures were determined from OH nightglow observations. Synthesized charts of the temperatures as well as the zonal and meridional wind components between 0 and 90 km altitudes are presented. The temperature measurements indicate the occurrence of several minor and one major stratospheric warming, the latter being observed over Andoya at the end of the launch series. Author (ESA)

THE IMPORTANCE OF PRECISION RADAR TRACKING DATA FOR THE DETERMINATION OF DENSITY AND WINDS FROM THE HIGH-ALTITUDE INFLATABLE SPHERE
F. J. Schmidlin and W. R. Michel (Dayton Univ. Research Institute, Wallops Island, VA) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 49-54 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Analysis of inflatable sphere measurements obtained during the Energy Budget and MAP/WINE campaigns led to questions concerning the precision of the MPS-36 radar used for tracking the spheres; the compatibility of the sphere program with the MPS-36 radar tracking data; and the oversmoothing of derived parameters at high altitudes. Simulations, with winds having sinusoidal vertical wavelengths, were done with the sphere program (HIROBIN) to determine the resolving capability of various filters. It is concluded that given a precision radar and a perfectly performing sphere, the HIROBIN filters can be adjusted to provide small-scale perturbation information to 70 km (i.e., sinusoidal wavelengths of 2 km). It is recommended that the HIROBIN program be modified to enable it to use a variable length filter, that adjusts to fall velocity and accelerations to provide wind data with small perturbations. INTERCOMPARISON OF WIND MEASUREMENTS PERFORMED WITH METROCKETS
W. Meyer *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 55-60 refs (For primary document see N86-18811 09-46)
(Grants DFG-Za-83; BMFT-WRK-275)
Avail: NTIS HC A18/MF A01

Falling sphere and chaff clouds tracked by monopulse radar were compared to assess the accuracy of wind measurement techniques. The accuracy of the horizontal wind speed derived from the radar track of meteorological rocket payloads depends on the equilibrium fall velocity of the payloads and the precision of tracking them by the radar. For inflatable passive falling spheres both effects lead to a growing wind error with increasing height requiring long filters in the upper mesosphere. Wind profiles derived from slowly descending foil clouds are used to optimize the filter length for sphere wind reduction. The interpretation of sphere wind data at mesospheric heights is discussed. Author (ESA)

WIND CORNERS AND WIND STRATA IN THE MESOSPHERE
U. vonZahn, W. Meyer (Max-Planck Inst. fuer Aeronomie, Katlenburg-Lindau, West Germany), and H.-U. Widdel *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 61-68 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

During the project MAP/WINE 18 mesospheric wind profiles were obtained above Andoya (69N; 16E) from radar tracking of the descent trajectory of foil clouds. As expected for the winter high-latitude mesosphere, most of the profiles show the winds to be highly variable in speed and direction. An unexpected feature of the observed wind shears is their property to frequently concentrate the changes in wind direction into very shallow altitude

layers, designated wind corners. They are characterized by large directional gradients and a small vertical thickness. The latter is narrow in comparison to wind strata immediately on top and below the corners where little or no change of wind direction occurs.

THE COORDINATED EISCAT AND BALLOON OBSERVATIONS (CEBO): EXPERIMENT AND RESULTS
S. Ullaland (Tromso Univ., Norway), T. Hansen, and W. Riedler (Austrian Academy of Sciences) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 75-79 refs Original contains color illustrations (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Two balloons were launched 80 km south of Tromso during the August 1984 high altitude wind turnaround. The first balloon measured during two nights, the second one during one night, simultaneously with the continuous operation of the EISCAT UHF system in a moderately disturbed geophysical situation. The EISCAT antenna was directed to a point 55 km above the current position of the balloons. Upper atmosphere phenomena associated with auroral particle precipitation were studied. Results show that a very close correlation exists between > 30 keV precipitating electrons (derived from the balloon measurements) and electron density measured by EISCAT.

ON THE INFLUENCE ON HIGH-LATITUDE CONVECTION PATTERNS OF POLARIZATION ELECTRIC FIELDS
G. Marklund, M. A. Raadu, and P. A. Lindqvist *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 81-88 refs Sponsored by Swedish Board of Space Activities (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

It is shown how the high-latitude convection pattern may be modified by substorm-enhanced polarization electric fields. These are generated when the flow of Birkeland currents associated with ionospheric conductivity gradients is limited. Such Birkeland currents are fed mainly by the enhanced Pedersen current in the evening and morning sectors of the auroral oval and by the enhanced Hall current around local midnight. As current limitation increases, the ionospheric potential, represented by a symmetric two-cell pattern, rotates clockwise and deforms as does the associated Birkeland current distribution which attains a symmetric shape relative to the noon-midnight magnetic meridian. The resulting patterns are shown to agree well with observations. A pronounced westward intrusion of the equipotential contours occurs in the auroral oval, and may be associated with the Westward Traveling Surge.

ARE PARALLEL ELECTRIC FIELDS REALLY THE CAUSE OF AURORAL PARTICLE ACCELERATION?
D. S. Hall, D. A. Bryant, and T. Edwards *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 95-97 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Measurements at altitudes of 1RE of electric fields, perpendicular to the magnetic field, with magnitudes larger than the ambient fields, and the electric fields necessary to produce an inverted-V electron stream are compared. It is concluded that the magnetic-field-aligned potential differences associated with the measured electric fields do not play a major role in the electron acceleration. It is also found that there is a contradiction if the parallel electric fields, invoked to account for the acceleration of precipitating electrons, are also invoked to account for the simultaneous acceleration of ions away from the Earth.

ACCELERATION OF AURORAL ELECTRONS BY LOWER-HYBRID WAVES
D. A. Bryant, R. Bingham, and D. S. Hall *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 99-102 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

An acceleration process in which the plasma sheet electrons acquire the energies necessary to produce auroral arcs and other discrete form auroras through resonant acceleration by lower-hybrid waves is considered. The form and magnitude of the acceleration are found to agree with observation, indicating that the process is important. It is clear that the wave intensities observed in the Earth's magnetosphere, specifically those of lower-hybrid waves, are capable of accelerating plasma sheet electrons to the degree necessary to produce auroral arcs and other discrete forms of aurora requiring power densities = 100 mW/sqm.

SCATTERING OF ELECTRONS IN THE EQUATORIAL PLANE DURING A PULSATING AURORA
I. Sandahl and L. Eliasson *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 103-109 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

The scattering of electrons in the equatorial plane during a pulsating aurora was investigated using wave and particle data from GEOS-2 and particle data from a sounding rocket. Most of the scattering appears to take place through the Doppler shifted gyroresonance with whistler mode waves. According to first order theory the pitch angle scattering from large to small pitch angles is accompanied by a loss of energy from the electrons. A model calculation is performed to find the equatorial plane electron distribution from the precipitating particle distribution. The calculated distribution agrees well with GEOS-2 observations except at large pitch angles.

NONISOTROPIC TEMPERATURE DISTRIBUTIONS IN THE AURORAL F-REGION AS MEASURED WITH EISCAT

U. P. Loevhaug, A. Brekke, N. Bjoernaa, and T. Hansen *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 111-114 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

The EISCAT UHF system measured ion temperatures at 240, 270, and 300 km altitude. Results show that nonmaxwellian ion velocity distributions occur in the auroral F-region. The ion temperature enhancements are caused by Joule heating. However, without measurements of the neutral wind it is not possible to state if a bi-Maxwellian description is appropriate or if a stronger deviation from the Maxwellian ion velicity distribution is present.

Dickinson (Science and Engineering Research Council, Chilton, England), C. R. Philbrick (Air Force Geophysical Lab., Hanscom AFB, Mass), and G. Witt (Stockholm Univ., Sweden) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 117-123 refs Sponsored by Swedish Space Corporation, Solna, Sweden, Bundesministerium fuer Forschung und Technologie, Bonn, UK Science and Engineering Research Council, London, Swiss National Science Foundation, Bern, US Airforce Geophysical Laboratory, Bedford, MD, Suomen Akatemia, Helsinki, CNRS, Paris, Max-Planck Gesellschaft, Norges Almenvitenskapelige Forskningsraad, and Naturvetenskapeliga Forskningsraadet, Stockholm (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

During the Cold Arctic Mesopause Project rockets were launched during a period of noctilucent cloud (NLC) sighting. The NLC height was 83 + or - 1 km. A high magnetic disturbance was present. High positive ion densities were measured in the lower inosphere. The temperature measurements show that their profiles in the stratosphere and lower mesosphere are near the values predicted by high latitude summer models. At altitudes between 83 to 94 km a wave structure with temperature minima of 139, 114, and 111 K is observed. The 138 K temperature minimum is located at the height of the observed NLC. Positive and negative ion composition measurements were obtained from rocket flights. Atomic oxygen was measured between 65 to 135 km. Nitric oxide densities are inferred from positive ion composition measurements.

SUPER COLD ARCTIC MESOPAUSE PROJECT (CAMP): A RESEARCH PROJECT TO INVESTIGATE THE POLAR MIDDLE ATMOSPHERE IN SUMMER WITH ROCKET LAUNCHES FROM 65 DEG-80 DEG N
E. Kopp, C. R. Philbrick (Air Force Geophysical Lab., Bedford, Mass.), G. E. Thomas (Colorado Univ., Boulder), and G. Witt (Stockholm Univ., Sweden) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 125-136 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

A Cold Arctic Mesopause Project for summer to study the structure and dynamics of the middle atmosphere (50 to 150 km) above the north polar region is proposed. It should concentrate on measurements of water vapor, ozone and temperature and their variability as a function of time, and geomagnetic and meteor shower activity; formation, particle size and density, transport and life time of noctilucent cloud (NLC) particles; dynamics and temperature and their effects on ice particle growths and the distribution of minor constituents including the ionospheric plasma; and electric fields, charged aerosols, and massive positive and negative ions in the vicinity of NLC. In situ measurements from rockets, grouped in two to three salvos should be supported by ground, airborne and satellite remote sensing experiments.

EXCITATION MECHANISMS IN THE ATMOSPHERES OF YELLOW AND RED GIANT AND SUPERGIANT STARS **c90**
O. Engvold, O. Kjeldseth Moe, E. Jensen, and P. Joraas *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 151-154 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Far ultraviolet emission line spectra of 16 cool giant and supergiant stars were obtained with the IUE satellite. The bright emission lines in the spectra of the stars are produced primarily through radiative excitation. The formation of chromospheric lines of O I and S I is discussed. The spectra of stars with Teff > or = 4300 K contain emission lines formed at temperatures of 80,000 and 100,000 K, which implies that these stars must have transition regions and hot coronas.

ON THE MECHANISM OF PRECIPITATION OF PORES IN MELTS AND PRODUCTION OF METALLIC FOAM UNDER REDUCED GRAVITY c76
H. Shahani and H. Fredriksson *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 173-182 refs Sponsored by Swedish Board for Space Activities (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Aluminum samples containing rounded hydrogen pores were remelted under reduced gravity and reduced ambient pressure. Due to reduced buoyancy forces, pores which expanded during remelting remained in the samples until solidification was completed and metallic foam was produced. The results of the experiments and a theoretical treatment of the nucleation, growth, and expansion of the pores are presented. Findings indicate that the existence of foreign particles in the melt is necessary for the nucleation of such pores and that pore size increases with the initial hydrogen content of the melt. The existence of dendritic net in the melt promotes production of metallic foam by reducing collision and by reducing the escape of bubbles. Samples with 4%Ti treated at 1 atm hydrogen and remelted at 0.2 atm achieve a reduction in density of up to 50%. Author (ESA)

ADVANCED MIRROR FURNACE FOR LONG ROD SAMPLES c25
H. Grunditz *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 183-187 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

A mirror furnace was designed for short duration microgravity applications in sounding rockets, making it necessary to have a very rapid furnace, in heating up and cooling down performances. A concept with as low thermal mass as possible was chosen. To fulfil the very strict requirements on isothermal conditions (+ or - 0.1C along the total sample length, up to 200 mm) the furnace is equipped with 3 linear-elliptical mirror arrays, each provided with a set of 10 halogen lamps. The lamps are individually controlled to give the correct temperature profile in the sample, which is equipped with up to 15 thermocouples, used in a microprocessor control loop. Author (ESA)

HIGH-FREQUENCY (HF) WAVE ACTIVITY OBSERVED BEAM INJECTOR FROM A ROCKET-BORNE ELECTRON ACCELERATOR c75
P. Ingsoey, J. Troeim, and M. Majewski (Austrian Academy of Sciences, Graz) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 191-196 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Data from a rocket experiment during which a 10 keV electron beam carrying a current of 10 to 100 mA was injected into the ionospheric plasma are presented. During the pulses, continuous HF emission was observed near two times the electron gyrofrequency. Transient emissions, associated with the beginning of the pulses, were observed near the upper hybrid frequency. The amplitude of the continuous emission was studied as a function of the beam current and perpendicular distance Dt between the antenna and the magnetic field line on which the accelerator was located. It is found that the amplitude of the continuous emission increase exponentially with the beam current, and decrease fast as Dt exceeds 30 m. Author (ESA)

EXAMINATION OF NONADIABATIC EFFECTS DURING AN ELECTRON BEAM EXPERIMENT IN THE IONOSPHERE c75
K. Wilhelm *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 197-204 refs Sponsored by NASA, DFVLR, and Canadian National Research Council (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Prompt and delayed echo fluxes and superacceleration of electrons were observed during the sounding rocket flight Several Coordinated Experiments using an electron accelerator. Magnetospheric electric fields parallel to the magnetic field were investigated. The degree of nonadiabatic behavior of the injected electron beam and the return flux was examined. It is shown that the region of strong beam-plasma interaction is limited to 300 km in length along the magnetic field but that backscatter or energetic electrons could occur from much larger distances. By appraising the difference in transit times of 1.9 and 3.9 keV electrons it is established that a continuous backscatter model operating out to several thousand kilometres is not consistent with the observations. THE S19 GUIDED SOUNDING ROCKET S38 TRIGGER OPTIMIZED REPETITION (TOR)
L. Hall and T. Forsell *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 205-210 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

The S38 sounding rocket guided by the SSC S19 guidance system measured the impact of sudden local artificial disturbance in the lower ionosphere. The payload consisted of diagnostic instruments, ejectable nosecone, boom systems, service modules, S19 guidance system and recovery system in the mother section, and 2 daughters containing cesium charges. The daughters were separated on the up-leg using high velocity separation systems. An eight-spring separation system was chosen to minimize the tip-off disturbances and the module length. Two artificial clouds were created by detonating the daughters on separate altitudes. The mother flew through the clouds giving measurement values outside and in the clouds. Author (ESA)

THE TETHERED SATELLITE SYSTEM PROJECT c18
M. Dobrowolny *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 211-216 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

The Tethered Satellite System project consists in flying a subsatellite tethered to a space shuttle orbiter at variable distances up to 100 Km from the shuttle. An electrodynamic mission with the tether made up of conducting material and an atmospheric mission using a tether of insulating material are planned. For the

atmospheric mission, the tethered satellite orbit is at 130 km altitude, allowing information to be collected from an area where a free flying satellite would soon be lost due to atmospheric drag. The electrodynamic mission uses the potential difference induced by the tether in active space plasma physics experiments.

ENERGIZATION OF ELECTRONS FOLLOWING ION RELEASE IN THE SOLAR WIND c92
D. A. Bryant, D. S. Hall, and C. P. Chaloner *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 217-220 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01
Barium ions were released in the solar wind on the dawn flank of the Earth's magnetosphere as one of the active experiments of the three-satellite AMPTE mission. The ensuing perturbation to solar wind flow resulted in the energization of solar wind electrons. This phenomenon is investigated to understand the heating mechanism in this event and following releases of lithium ions also in the solar wind. Energization appears in all cases to be energy selective suggesting a resonant acceleration by plasma waves excited by the releases. Author (ESA)

Dobrowolny (CNR, Frascati, Italy) *In its* The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 221-225 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01
The I-V characteristics of a spherical body of 10 cm diameter were investivated in a large plasma chamber in which the plasma environment of the electrodynamic tethered satellite is well reproduced. The relative velocity of the plasma with respect to the test body is 8 km/sec. Floating potential profiles are measured upstream and downstream of the test body. The measurements are made for a range of normalized body potential between -1000 and +400. The influence of an axial magnetic field on the sheath potential profile and on the current collecting capability of the body is investigated. The experimental results, compared to theoretical models, indicate a key role of the Earth's magnetic field in the interaction of the tethered satelite with ionospheric plasma. Author (ESA)

GROUND-BASED MICROWAVE OBSERVATIONS OF MESOSPHERIC OZONE: INTERCOMPARISON WITH MEASUREMENTS OBTAINED BY OTHER TECHNIQUES
J. delaNoe, C. Turati, and A. Baudry *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 233-237 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01
Ozone measurements at 110,836 GHz were obtained with a radio telescope. From such measurements it is possible to derive the integrated ozone content above 38 km and the vertical profile of the ozone distribution. Such a profile compares well with profiles obtained simultaneously during the MAP/GLOBUS campaign by a balloon-borne microwave receiver at higher frequency (184 GHz) and by a Dobson spectrophotometer operated in the short Umkehr method. Diurnal variations of the ozone content are also studied.

STRATOSPHERIC WATER-VAPOR MEASUREMENTS ON BOARD LONG-DURATION BALLOONS
F. Goutail and J. P. Pommereau *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 243-246 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01
An infrared Montgolfiere balloon (MIR) was designed for long duration flight in the Intertropical Convergent Zone (ITCZ) to study the so-called Stratospheric Fountain, i.e., water vapor in the lower stratosphere originating from tropospheric air injection. It is suspected that the Stratospheric Fountain mainly occurs in the equatorial region, above the anvils of the highest cumulonimbus clouds of the world in the Micronesian aerea. The MIR appears to be adequate to perform measurements above the ITCZ in the Stratospheric Fountain. Water-vapor in situ observations below this vehicle are demonstrated to be feasible, although the data recorded during a test flight show the experiment to require refinements. It may be possible to investigate the tropospheric water-vapor, ozone and NOx injection into the stratosphere in the Fountain area. Author (ESA)

COMPARISON BETWEEN ST RADAR AND IN SITU BALLOON MEASUREMENTS c47
F. Dalaudier, J. Barat, F. Bertin (Centre National d'Etudes et Telecommunications, Saint Maur des Fosses, France), E. Brun (Toulon Univ., France), M. Crochet (Toulon Univ., France), and F. Cuq (Toulon Univ., France) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 247-251 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01
A campaign for simultaneous observation of troposhere and lower stratosphere is described. The backscattered signal from refractive index turbulence and mean temperature gradients is compared with velocity and temperature measurements made in the same region by a balloon. The campaign studied the physics of radar measurements and aspect sensitivity (modification of the signal strength with the radar tilt). The vertical backscattered power was compared with the temperature gradient as measured by the

fine temperature probe. The oblique signal was compared with turbulent velocity and temperature structures as seen by ionic anemometers and fine temperature probes. Despite difficulties in comparing due to the different spatiotemporal characteristics of the two instruments, clear correlations appear. Author (ESA)

OZONE AND NITROGEN OXIDES IN THE MIDDLE ATMOSPHERE: A THREE-DIMENSIONAL MODEL SIMULATION
G. Brasseur and K. Rose (Freie Univ., Berlin, West Germany) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 255-258 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

The behavior of ozone and nitrogen oxides in the lower stratosphere is simulated by a three dimensional primitive equation model. The effects of the planetary waves and their propagation in the winter hemisphere are considered together with the most important chemical and photochemical reactions involved in the Ox, HOx and NOx system. The model shows that ozone is transported counterclockwise around the asymmetric polar vortex leading to larger values at high latitudes. It produces sharp gradients in the NOx mixing ratio in regions near 60 to 70 deg latitude in good agreement with observations of NO2. Author (ESA)

TURBULENT PARAMETERS OF THE LOWER THERMOSPHERE AS DETERMINED BY MASS SPECTROMETER DURING THE MAP/WINE CAMPAIGN
F.-J. Luebken, Ch. Puetz, and U. vonZahn *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 259-265 refs (For primary document see N86-18811 09-46)
(Contract BMFT-01-OE-031-0)
Avail: NTIS HC A18/MF A01

During the MAP/WINE campaign small scale fluctuations (for scales from 10 to 500 m) of the nitrogen number densities were measured in the altitude range from 90 to 115 km above Andoya (69 N, 16 E) by the Bonn University Gas Analyzer for Turbulence and Turbopause Investigations (BUGATTI). Altitude profiles of turbulent parameters such as spectral index, mean turbulent velocity, and energy dissipation rate are derived from a spectral analysis of the density fluctuations observed during the MAP/WINE experiments M-T5 and M-T6. The results for the flight M-T6 of BUGATTI are presented. Author (ESA)

N86-18852# Bonn Univ. (West Germany). Inst. fuer Physik.
ON THE COMPARISON OF TURBULENT PARAMETERS AND EDDY COEFFICIENTS IN THE LOWER THERMOSPHERE
U. vonZahn and Ch. Puetz *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 267-270 refs (For primary document see N86-18811 09-46)
(Contract BMFT-WRK-0275-01-OE-047-0)
Avail: NTIS HC A18/MF A01

Techniques to measure turbulence in the lower thermosphere are reviewed. The instantaneous properties of turbulence in the lower thermosphere (e.g., turbulent velocities and density fluctuations) can be measured in-situ by smoke trails, instrumented falling spheres, ion probes, and mass spectrometers. Information on turbulent processes may also be gained by studying the composition of the lower thermosphere. In contrast to density fluctuations, however, compositional profiles can provide quantitative information on only the long term average of turbulent activity. Compositional profiles are sensitive to the presence of vertical bulk motions. Author (ESA)

SPECTRAL CHARACTERISTICS OF POSITIVE ION-CURRENT FLUCTUATIONS MEASURED BY ION PROBES
T. A. Blix, E. V. Thrane, and O. Andreassen *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 271-273 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Ion-current fluctuations as determined by ion-probes flown during the MAP/WINE campaign were investigated using Fourier analysis. The spectral characteristics as a function of height are shown, and the results are compared with similar investigations. Possible evidence for an inner microscale which indicates a transition from an inertial to a viscous range is presented. Author (ESA)

N86-18854# Norwegian Defence Research Establishment, Kjeller.
TURBULENCE CHARACTERISTICS AS DETERMINED BY CROSS CORRELATION ANALYSIS
T. A. Blix and E. V. Thrane *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 275-278 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

During the Energy Budget Campaign two spherical gridded electrostatic probes were successfully released from the mother payload in each of two rocket-salvoes. The probes measured positive ion-current in the altitude range 60 to 150 km with a time resolution of 0.5 msec (sampling frequency 2000 Hz), corresponding to a spatial resolution better than 0.6 m taking the rocket velocity into account. The probes were ejected sideways from the main payload, in opposite directions, with a relative separation speed in the range 5 to 10 m/sec. The ion-currents measured by the probes are cross-correlated after spin effects are removed from the data. Author (ESA)

MEASUREMENTS OF MINOR CONSTITUENTS INFRARED EMISSIONS IN THE MIDDLE ATMOSPHERE DURING MAP/WINE CAMPAIGN
K. U. Grossmann, H. G. Brueckelmann, and P. Schwabbauer *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 285-290 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Mesospheric temperatures, ozone concentrations, and water vapor concentrations were determined in January and February at high latitudes (70 N) during the MAP/WINE campaign. All parameters are found highly variable in time and as function of altitude. Ozone densities in the lower mesosphere are apparently controlled much more by dynamic processes than by photochemistry. Nitric oxide 5.3 micron and carbon dioxide 15 micron band radiances measured in the lower thermosphere under conditions of an extremely low atomic oxygen content give insight into non-LTE cooling processes at these altitudes. Author (ESA)

GEOMAGNETIC ACTIVITY AND SOLAR CYCLE c92
P. A. Simon and J. P. Legrand (INSU Mesure, Saint-Maur, France) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 305-311 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

The relationships with the sunspot cycle and solar origin of solar phenomena which contribute to geomagnetic activity are discussed. Shock event activity has a loose link, if any, with the sunspot number but a quite definite cycle behavior. The temporary expansion of polar wind streams generate the so-called recurrent geomagnetic activity just before a sunspot minimum. The remaining activity is related to the distribution around the Sun and to the time evolution of the densest coronal regions (coronal streamers and heliosheet) which are the sources, in the ecliptic plane, of the slow undisturbed wind of the quiet days, and of the low density areas in between which are the origin in the ecliptic plane of the fluctuating wind activity.

THE SAAB SPINNING ROCKET ATTITUDE CONTROL (SPINRAC): AN ATTITUDE CONTROL SYSTEM FOR OBTAINING LOW IMPACT DISPERSION c15
L. Hall and A. Helmersson *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 361-364 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

The Spining Rocket Attitude Control system, (SPINRAC) system for three-stage sounding rocket impact dispersion reduction is described. The SPINRAC points the spin-stabilized third stage to a predetermined attitude, prior to ignition. The SPINRAC uses a roll-stabilized gyro platform for inertial attitude information, processes the signals in a microcomputer, and uses a cold-gas system for actuation. Using control theory the guidance time can be kept small and thrust force low. Typically a reorientation angle of 20 deg and a coning half-angle of 10 deg is controlled to an accuracy of 0.4 deg 3-sigma value within 20 sec. Using the SPINRAC on a three-stage sounding rocket (Black Brant X, Skylark 12) makes it possible to reach apogee altitudes of 1000 km while maintaining low impact dispersion. Author (ESA)

FORECASTING SOLAR FLARES AND GEOMAGNETIC STORMS AT MEUDON (FRANCE) c92
P. A. Simon and P. Lantos *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 369-370 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Methods to forecast solar flares and geomagnetic storms are reviewed, and geomagnetic activity in 1986-87 is forecast. The next sunspot cycle is likely to reach its peak in 1989-1990 with a maximum sunspot number close to 100. As a consequence the next geomagnetic minimum is expected to be quite low with an annual aa value of 12 gamma (Ap = 8) in 1986 and 1987. Experiments requiring geomagnetic disturbance will be difficult to perform with only 60 disturbed days a year. During the remaining time, the geomagnetic field will be quiet with a large number (195) of very quiet days. It will the first opportunity to study a very quiet ionosphere or magnetosphere since 1934 (184 very quiet days) or 1923 (244 very quiet days) but definitely more active than in 1901 (314 very quiet days). The major elements of the NASA manned space station are described, and science activities it could be used for are suggested. The core facilities include at least two major laboratory modules with supporting utilities, including habitation accommodations, docking facilities, power and heat rejection units, and external space and support for attached payloads. A vertically oriented structure, called the Power Tower, is being studied. Scientific accommodations inside the modules include major facility instrumentation for a variety of microgravity research projects, with initial emphasis upon materials research and life sciences. The second element is composed of free-flying satellites operating in orbits near the core station. The third element consists of satellites in polar orbits. One or more large, multi-instrument platforms are planned for Earth observation and solar-terrestrial processes research. Author (ESA)

Woodman (Instituto Geofisico del Peru, Lima) *In* ESA The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research 1985 p 381-384 refs (For primary document see N86-18811 09-46)
Avail: NTIS HC A18/MF A01

Results of a coordinated troposphere/lower stratosphere sounding campaign including 430 MHz radar and balloon borne experiments are analyzed. The radar operates in the altitude range 6 to 24 Km with a time resolution of 1 min and an altitude resolution of 150 m. The balloons are equipped with sonic anenometer, and temperature and pressure sensors. The campaign studied the interaction between waves and turbulence in the tropical troposphere and lower stratosphere, and scattering mechanisms contributing to clear air radar echoes. Results show good correlation between radar echo profile, the step-like structure observed in the potential temperature profile, and wind shears. Author (ESA)

REPRESENTATION OF TOPOGRAPHY IN SPECTRAL MODELS
C. H. Yang 23 Sep. 1985 8 p
(AF Proj. 231-0)
(AD-A159917; AFGL-TR-85-0214) Avail: NTIS HC A02/MF A01 CSCL 08/2

Various ways of representing topography that is a part of a global spectral model have been examined using the notions of error-in-synthesis and error-in-reproduction in measuring accuracy and fidelity. The trapezoidal and Gauss-Legendre quadratures are employed in conjunction with different truncations in the numerical computation of the transformations. The results have led to the following conclusions: (1) the model terrain is best defined by the set of spectral coefficients in a truncation range that is commensurate with the model resolution; (2) The model terrain in the real domain should be defined on the Gaussian latitudes as the transform of the spectral coefficients using the Gauss-Legendre quadrature; (3) smoothing by a spectral truncation alone is not sufficient to insure the accuracy either in synthesis or in reproduction. CALCULATION OF SOURCE AND STRUCTURE PARAMETERS AT REGIONAL AND TELESEISMIC DISTANCES Final Technical Report, 1 Jan. 1983 - 3 Mar. 1985
C. A. Langston and R. J. Greenfield 31 May 1985 107 p
(Contract F49620-83-K-0019; ARPA Order 4397; AF Proj. 2309)
(AD-A160138; AFOSR-85-0753TR) Avail: NTIS HC A06/MF A01 CSCL 17/10

Teleseismic SV waves have been generally ignored in wave propagation and source studies because of known complications in wave propagation for structure near the source and near the receiver. The validity of common optic ray and WKBJ seismogram methods for computing SV synthetic seismograms is examined by computing synthetic seismograms using these techniques and comparing them to SV synthetics produced from a wavenumber integration technique. Both ray methods give a poor approximation to the wave propagation for distances less than 60 deg. Diffracted Sp and the SPL wave interfere with near source phases, such as S, pS, and sS for a shallow seismic source, producing anomalously high amplitudes and complex waveforms in agreement with observational experience. Because of the Moho Sp and diffracted Sp phases, the vertical component of motion shows greater distortion, relative to the ray theory result, than does the radial component of motion. Ray theory appears to be appropriate for the initial 20 seconds of the SV wavetrain from a shallow source for ranges greater than 60 deg. SV waves from deep sources are less affected by diffracted Sp and SPL than SV from shallow sources. GRA

In this document we report the results of combined high amplitude tensile and compressive loading experiments on four different rock types: Westerly granite, Boise sandstone, Berea sandstone, and Indiana limestone. The details of the stress-strain hysteresis loops are examined, with emphasis on investigating the elastic and inelastic properties of rocks at nonlinear amplitudes in both tension and compression. The results indicate that the mechanical behavior of rocks can be significantly different in compression than in tension and that the onset of nonlinear effects with increasing strain may not be the same for compressive loads as for tensile loads. All available evidence indicates that the primary relaxation mechanism at nonlinear amplitudes between 10 to the minus 6th power strain and 0.0001 strain involves intergranular friction. More experimental work in this area will shed light on the

issue of linearity vs nonlinearity at intermediate strains, and also will provide realistic detailed information about rock rheology for the numerical modeling of near-field seismic pulse propagation.

STUDY OF LARGE AEROSOL PARTICLES Final Report, 1 Dec. 1981 - 28 Feb. 1984
D. J. Hofmann and J. M. Rosen 3 May 1985 38 p
(Contract F19628-82-K-0016)
(AD-A160379; AFGL-TR-85-0096) Avail: NTIS HC A03/MF A01 CSCL 04/1

This report develops a stratospheric aerosol optical model which is based on a size distribution determined from direct measurements and additionally constrained to be consistent with large data sets of independently measured macroscopic aerosol properties such as mass and backscatter. The period under study covers background as well as highly disturbed volcanic conditions and an altitude interval ranging from the tropopause to about 30 km. The predictions of the model are used to interpret and intercompare diverse types of stratospheric aerosol measurements.

A new general methodology is developed for the determination of the statistics of multisensor survey residual gravity. The method is ideally suited for the design of multisensor surveys to achieve a desired level of gravity recovery accuracy. Survey types considered consist of any combination of satellite radar altimetry, high-low satellite-to-satellite tracking, shipborne or land-based gravimetry and airborne gravimetry. Several examples of the results obtained with the methodology are included.

DETAILED SPHERICAL-HARMONIC REPRESENTATION OF THE EARTH'S GRAVITY FIELD AND TIDAL EFFECTS FROM ALTIMETRIC ADJUSTMENTS Final Report, 1 Jan. 1982 - 31 Dec. 1984
G. Blaha Feb. 1985 95 p
(Contract F19628-82-K-0007)
(AD-A160419; AFGL-TR-85-0076) Avail: NTIS HC A05/MF A01 CSCL 08/5

Two second-phase techniques have been developed based on the results of the global spherical-harmonic treatment of altimetric data. One of these techniques has been documented as the point-mass adjustment, and the other has been described under the name of modified collocation with noise. The term modified does not concern the philosophy of the least-squares collocation with noise, but, rather, its specific application aimed at describing a smoothed-out gravity field, in which the part of the signal beyond the desired smoothing level is pushed into the realm of noise. The primary task consists in representing collocation results in terms of the spherical-harmonic expansion of the geopotential. In particular, an equilateral grid of geoid undulations (referring to a higher order surface than an ellipsoid) predicted through the modified collocation with noise at the smoothing level (n',n') can be utilized in a numerical integration algorithm, eventually producing an (n', n') set of spherical-harmonic coefficients consistent with the collocation results. The conditions under which the consistency requirement is satisfied are analyzed in computer simulations. As the most important outcome of these simulations, the familiar rule of thumb is singled out as an accurate and clearcut indicator of the highest degree and order spherical-harmonic model (N, N) which can still faithfully represent the gravity field as described by a discrete set of data – here an equilateral grid of geoid undulations. This rule stipulates that N=180 180 deg/theta deg, where theta deg symbolizes the grid interval in angular measure.

A STATISTICAL GRAVITY MODEL FOR NORTHERN TEXAS Report, May - Oct. 1984
J. V. White 19 Nov. 1984 25 p
(Contract F19628-83-C-0053)
(AD-A160474; Rept-4423-5; AFGL-TR-85-0037; SR-3) Avail: NTIS HC A02/MF A01 CSCL 12/1

A statistical gravity field model has been developed for northern Texas, where the Gravity Gradiometer Survey System (GGSS) will be tested. The model is described in this report using both round-Earth and flat-Earth Attenuated White Noise (AWN) formulations. The model is fitted to all worldwide and local gravity-field information that is applicable to the GGSS test site. In addition, a discrete approximation to the AWN model is described, which can be used to compute simulated GGSS survey data and the surface truth data for the test area. It is expected that the AWN model and the derived simulated data will be useful for optimizing, testing, and validating GGSS data processing algorithms and software.

PROFILES OF TEMPERATURE AND DENSITY BASED ON 1 AND 10 PERCENT EXTREMES IN THE STRATOSPHERE AND TROPOSPHERE Air Force Surveys in Geophysics 1983 - 1984
A. J. Kantor and P. Tattelman 27 Dec. 1984 61 p
(AF Proj. 6670)
(AD-A160552; AFGL-TR-84-0336; AFGL-AFSG-447) Avail: NTIS HC A04/MF A01 CSCL 04/1

Vertical profiles of temperature and density have been developed based on 1 and 10 percent warm and cold temperatures and 1 and 10 percent high and low densities occurring at the worst locations in the world (except Antarctica) during the worst month. The profiles, from the surface to 80 km, are based on extremes that occur at 5, 10, 20, 30, and 40 km. For example, one of the temperature profiles developed was based on a 10 percent warm temperature at an altitude of 20 km; thus, it represents meteorological conditions typically associated with this extreme. Ten such warm profiles (5 levels by 2 percentiles) and 10 cold profiles have been constructed from 14 years of rawinsonde and rocketsonde observations. Internally consistent hydrostatic profiles of density associated with these temperature profiles are provided. Twenty analogous density (and associated temperature) profiles also have been developed from extreme densities occurring at these altitudes. Thus, a set of realistic profiles (rather than envelopes) of temperature and density associated with extremes at specified levels in the troposphere and stratosphere are available for altitudes up to 80 km.

This report discusses procedures for the extrapolation of low-strain seismic measurements made at a specific site to predict the site response under earthquake loading conditions. Because of the nonlinear relation between stress and strain exhibited by soils at strain levels exceeding about 0.000001, a program to determine dynamic soil properties at low to high strain levels and at different depths in the soil column at the site is required. Utilizing recent advances in field measurement techniques, this goal can be best accomplished with a combination of in situ geophysical methods, including surface reflection and refraction methods; cross-hole and down-hole techniques utilizing impulsive and vibratory sources; and dynamic loading methods involving monitoring of in-place deformation. Knowledge of the variation with strain level and other factors of equivalent moduli and damping at a site

may enable frequency-dependent scaling rules to be developed for the computation of high-strain response from microseismic response curves. This procedure can be evaluated by performing field measurements at sites for which comprehensive strong motion data bases are already available. Author (GRA)

This report presents available geologic information pertinent to siting a repository for high-level nuclear waste in crystalline rock in central Maryland; noncoastal Virginia, North Carolina, and South Carolina; and northern Georgia. For each of the states within the Southeastern Region, information is provided on the geological disqualifying factor and the geologic regional screening variables to be used in region-to-area screening. The geological factor and variables include deep mines and quarries, rock mass extent, postemplacement faulting, suspected Quaternary faulting, seismicity, rock and mineral resources, major ground-water discharge zones, ground-water resources, state of stress, thickness of rock mass, and thickness of overburden. Information is presented on the age, areal extent, shape, composition, texture, degree and type of alteration, thickness, and structural features associated with each rock body or complex. Regional seismic and tectonic information is presented, including patterns of earthquake occurrence, earthquake magnitudes, horizontal ground accelerations, and vertical crustal movements. Also included are discussions of the rock and mineral deposits or mines located within or near crystalline bodies; ground-water resources and regional hydrology; postulated changes in climate and the associated effects; and landforms, surface processes, and surficial materials on or near the rock bodies. Includes weather forecasting and modification.

N86-18889 Deutscher Wetterdienst, Offenbach am Main (West Germany).
REPORTS FROM THE GERMAN METEOROLOGICAL SERVICE. NUMBER 168: A ONE-DIMENSIONAL NUMERICAL MODEL FOR THE PREDICTION OF FOG [BERICHTE DES DEUTSCHEN WETTERDIENSTES. NR. 168: EIN EINDIMENSIONALES NUMERISCHES MODELL ZUR NEBELVORHERSAGE]
Sigrid Hacker-Thomae (Bonn University) 1985 49 p refs In GERMAN; ENGLISH summary
(ISBN-3-88148-217-2; ISSN-0072-4130) Copyright. Avail: Issuing Activity

A one-dimensional model for the prediction of radiation fog is presented. The model domain (between -1, and 2800 m height) was resolved by a nonequidistant grid. For the atmosphere, the temperature, moisture, liquid water, and wind are predicted; for the soil, only the temperature is predicted. Since the model is developed under the aspect of operational applicability, completeness and simplicity are aimed at. Therefore, the model equations are closed by eddy diffusion coefficients which can however take into account thermal and dynamic stability. Simulations are compared with observations. It is shown that the model simulates the course of spread, and therefore the onset of fog reasonably well, but underestimates the decrease of soil surface temperature. The choice of soil parameters proves to be important. Sensitivity tests show that the quality of the prediction is distinctly predetermined by the input data, thus reducing the possibilities for operational applicability considerably. Author (ESA)

Langley, in the late nineteenth century, attempted to measure solar irradiance over an extended period of time in order to detect changes. The problem with this and other early attempts was that ground based measurements are not sufficiently accurate to measure solar irradiance fluctuations, which are on the order of 0.1%. It was not until the Active Cavity Radiometer Irradiance Monitor (ACRIM) experiment on the NASA Solar Maximum Mission (SMM) was launched in 1980 that continuous data with precision 0.1% was available. ATMOSPHERIC ELECTRICITY HAZARDS THREAT ENVIRONMENT DEFINITION Interim Report, Aug. 1982 - Mar. 1984
B. G. Melander and W. W. Cooley Aug. 1985 155 p
(Contract F33615-82-C-3406)
(AD-A159739; AFWAL-TR-85-3052) Avail: NTIS
HC A08/MF A01 CSCL 01/2

This document provides definition of the atmospheric electricity threat environment as part of the Atmospheric Electricity Hazards Protection (AEHP) program. This issue contains an initial atmospheric electricity threat to be used for aircraft based on measurement of: (1) the lightning threat at the ground, and (2) the static electrification threat at altitude. The experimental basis for this threat is critically reviewed. Recommendations are made for future work in atmospheric electricity environments to refine and improve understanding of aircraft AEH environments. GRA

MICROBURST WIND SHEAR MODELS FROM THE JOINT AIRPORT WEATHER STUDIES (JAWS) Final Report
W. Frost, H. P. Chang, K. L. Elmore, and J. McCarthy Jun. 1985 198 p
(Contract DTFA01-82-Y-10513)
(AD-A159758; DOT/FAA/PM-85/18) Avail: NTIS
HC A09/MF A01 CSCL 04/2

Multiple Doppler radar data collected during the Joint Airport Weather Studies (JAWS) Project is used to synthesize the three-dimensional wind in the region of a microburst. A six-degree-of-freedom numerical aircraft model having characteristics similar to Boeing 727 series aircraft is used to investigate jet transport aircraft response to microburst winds during simulated approaches and departures. Simple pilot control laws are used to adjust thrust, pitch, roll, and yaw so as to maintain given approach or departure parameters. Generally, when horizontal wind shear along the approach or departure path is .0001/s or greater, the model is unable to maintain the desired approach path and suffers a significant reduction in climb performance during a go-around or departure. Although the mean wind shear along a path gives a good qualitative measure of the wind shear threat to a jet transport, different paths with similar mean shears can yield markedly different results, as do the same paths with similar mean shears can yield markedly different results, as do the same paths through the microburst at different times, emphasizing the fine temporal and spatial scale of microburst winds. Finally, during the approximate 30 s period required for the aircraft to traverse the region of highest horizontal shear, time variations in the microburst wind field are shown to insignificantly affect the modelled flight path because the traverse period is a short time compared to the life time of a microburst. GRA

A COMPUTER PROGRAM TO MODEL THE Cn2 OPTICAL TURBULENCE CHARACTERISTICS OF A GIVEN ATMOSPHERE, ITS CONVERSION TO IBM FORTRAN AND UTILIZATION M.S. Thesis
N. J. Padula Jun. 1985 67 p
(AD-A159762) Avail: NTIS HC A04/MF A01 CSCL 09/2

This thesis describes the conversion of a computer program form FORTRAN IV used by the CDC computer to FORTRAN IV compatible with the Naval Postgraduate School IBM 3033 system. The converted program, called TURB2, estimates the magnitude of the refractive index structure parameter, sq Cn(z), for a dry atmosphere in horizontal layers. The altitudes of the layers depend upon the corresponding altitudes of conventional meteorological rawinsonde balloon data. The data input is a formatted file called TURB2 DATAIN and the output consists of the value of dry sq Cn at each altitude along with a graph of log Cn2 vs altitude. Author (GRA)

THE OPERATIONAL METEOROLOGY OF CONVECTIVE WEATHER. VOLUME 2: STORM SCALE ANALYSIS Final Report
C. A. Doswell, III Apr. 1985 252 p
(AD-A159919; AWS/TN-85/001-Vol-2) Avail: NTIS

HC A12/MF A01 CSCL 04/2

This document deals primarily with fundamental aspects of convective meteorology. In order to present storm-scale meteorology, a wide range of topics are considered. Certain subjects, like precipitation physics, are examined at some length in order to provide the basic physical understanding of how thunderstorms work. A classification scheme is introduced for convective storms. This scheme allows the reader to make certain physical distinctions in the way storms are organized and will allow one to infer how the storms behave. GRA

CONVECTIVE CLOUD CLIMATOLOGIES CONSTRUCTED FROM SATELLITE IMAGERY

M. A. Klitch, J. F. Weaver, F. P. Kelly, and T. H. VonderHaar Mar. 1985 14 p Previously announced in IAA as A85-34430

(Grant AF-AFOSR-0162-82)

(AD-A159969; AFOSR-85-0843TR) Avail: NTIS

HC A02/MF A01 CSCL 04/2

Composites of satellite imagery are constructed for various hours and various summer months on Colorado State University's interactive processing system. Simple averages of visible wavelength imagery are considered as well as averages of bispectrally classified data. The classified images use both visible wavelength and infrared wavelength data to identify probable deep convection. Results reveal the diurnal convective cycle over the Rocky Mountains and high plains in greater detail than has been previously possible. The convective frequency composites are compared with precipitation averages and differences between normal versus severe weather patterns are discussed. Practical forecasting applications for the composited data are suggested and discussed. Author (GRA)

LOW-LEVEL WIND SYSTEMS IN THE WARSAW PACT COUNTRIES Final Report

W. E. McCollom, K. R. Walters, R. W. Coyle, E. L. Smith, and G. E. Elder Mar. 1985 58 p

(AD-A160144; USAFETAC/TN-85/001) Avail: NTIS

HC A04/MF A01 CSCL 04/2

This technical note provides a comprehensive survey of local wind systems in the Warsaw Pact and adjacent NATO and neutral countries. The region surveyed is divided into two geographical areas that cover most of Europe. Local winds are named and related to listed meteorological definitions. Distinctive wind characteristics are identified for the specific local wind or for its locale. Maps showing distribution and location of local wind systems are included. Additional local wind names are listed. Locally-named winds are defined and described. GRA

THE EUROPEAN LFM-STYLE FORECAST AIDS Final Report

H. D. White, III, M. Adams, and D. G. McGrew 8 May 1985 29 p

(AD-A160166; Rept-2WW/TN-85/001) Avail: NTIS

HC A03/MF A01 CSCL 04/2

The purpose of this publication is to provide you, the forecaster, with guidance on how to use the 2nd Weather Wing's LFM Style facsimile products. The authors have gone an extra step to briefly review the basic meteorology, apply it to the models, and then provide guidelines. For this reason, this Technical Note (TN) has much wider application than just for the facsimile products. It touches on and aspect forecasters are most likely to forget; fax charts are just tools, and as such are only as good as we make them. As is true in most professions weather forecasters have come to rely heavily on computer products - almost to the point of blind acceptance. Yet, attitudes should be to consider computer-generated products as a friendly colleague who, although keenly analytical, is prone to making real blunders when presented with bad data. For this reason, the concepts of initialization and continuity are reviewed first. The remaining sections cover how to use the specific fields on the LFM package in detail great enough to be used as a reference to charts in general. This TN can assist you in setting up your LAFP in that reasons for specific entries on your TAF Worksheet can be drawn from these charts. GRA

FRONTAL PASSAGE DATA FROM THE SOUSY-VHF-RADAR Final Report, 1 Mar. 1983 - 28 Feb. 1985

D. T. Farley Aug. 1985 61 p

(Grant AF-AFOSR-0100-83)

(AD-A160211; AFOSR-85-0852TR) Avail: NTIS

HC A04/MF A01 CSCL 04/2

Experiments have shown that there may be advantages in using a spaced antenna method instead of a Doppler method for measuring wind profiles, particularly for systems with small dimensions of the type likely to be used in operational wind profiling. The comparison between radar and radiosonde data have shown good agreement, indicating that the features seen in the radar reflectivity data are characteristic of frontal temperature structure and not associated with precipitation or local convection. Experiments show that a VHF radar operated continuously can provide synoptically meaningful meteorological data and is capable of high time resolution data required by future numerical methods. AVIATION WEATHER FORECASTS BASED ON ADVECTION: EXPERIMENTS USING MODIFIED INITIAL CONDITIONS AND IMPROVED ANALYSES Environmental Research Papers, Oct. 1983 - Oct. 1984

H. S. Muench and D. A. Chisholm 21 Jan. 1985 62 p

(AF Proj. 6670)

(AD-A160369; AFGL-TR-85-0011; AFGL-ERP-904) Avail: NTIS

HC A04/MF A01 CSCL 04/2

Previous experiments had shown that upper-level wind flows could be used to advect surface weather parameters to produce short range (0 to 15 hours) forecasts. However, to achieve scores better than persistence, allowance had to be made for stationary weather patterns and also for diurnal changes in weather

conditions. Two new forecast experiments were prepared and carried out, using data from 12 cases during March 1983. First, data were edited and adjusted to reduce effects of local conditions (altitude, surface roughness), and then were advected. Finally, the adjustment was removed. The forecasts using a 500 mb space-averaged flow with modified initial conditions produced improved advection forecasts, with some parameters better than persistence and MOS (Model Output Statistics) for 2 to 7 hours. In the second experiment, an improved objective-analysis procedure was introduced, one based on the Barnes approach, which uses one-half degree (about 45 km) resolution and previous analysis as a first guess. (Prior analyses were 1 degree, single pass, Cressman-type analyses). These improved analyses resulted in a somewhat better score for 1 to 3 hours (using a change-advection technique), but were slightly worse at longer periods. Apparently, the small-scale patterns recovered by the improved analyses were largely either short-lived or stationary. These conditions would not lead to better advection forecasts. Further examination revealed that those parameters most difficult to resolve in the objective analyses (visibility, ceiling, and wind speed) also had the lowest forecast skill scores for persistence. SOME MICROPHYSICAL PROCESSES AFFECTING AIRCRAFT ICING Final Scientific Report, 1 Oct. 1981 - 30 Sep. 1984
H. J. Sweeney and I. D. Cohen 8 May 1985 45 p
(AD-A160375; AFGL-TR-85-0100; AFGL-ERP-914) Avail: NTIS
HC A03/MF A01 CSCL 04/2

This report summarizes work done as part of the aircraft icing probabilities program. It contains a look at icing in layer-type clouds, a comparison of Particle Measuring System (PMS)2-D data from two flights. and a look at additional data obtained from researchers in the Federal Republic of Germany. The parameters measured in a warm and cold layer-type cloud near Peoria, IL are analyzed and compared. Liquid water content (LWC), cloud depth, particle diameter and particle concentration are compared. Variations of these parameters are compared. In mature clouds, where droplet sizes are approximately equal, the LWC is directly related to the number concentration. The icing rate, LWC and droplet size all increase as a function of height above cloud base. Synoptic patterns and PMS 2-D data obtained on two flights are compared. The first flight, made near Greensboro, NC was in an area of heavy precipitation. The large particles present produced very little icing. The other flight, near Flint, MI was in an area which was experiencing only spotty precipitation. The aircraft, however, experienced moderate icing. Data gathered on aircraft observations in the Federal Republic of Germany are examined. The data show that in strong icing situations, there are many particles with diameters of 10 to 20 microns. The results match those obtained by our research flights. GRA

A limited set of radar and aircraft data acquired during the 1981 and 1982 Joint Agency Turbulence Experiment are used to compare incoherent and coherent radar methods for atmospheric turbulence severity estimation. Time series of ground-based radar in-phase and quadrature signal return data are processed by Doppler (Fast Fourier Tranform) and incoherent (R-meter with and without noise correction) methods to determine Doppler spectrum variance. These variance data serve as input to a turbulence algorithm to derive estimates of turbulence severity. These estimates are then compared with in-situ aircraft measurements. Results show the order of preference for the radar methods is Doppler, R-meter with noise correction, and R-meter without noise correction. The R-meter without noise correction method must be considered unreliable since it results in large overestimates of turbulence severity when the signal to noise ratio is less than about 12 dB. The R-meter with noise correction method generally duplicates well the results derived from Doppler analysis and may be considered a reasonable alternative when Doppler capability is not available. Doppler radar and aircraft data acquired during the 1981 and 1982 observation seasons are discussed. Time histories of Doppler radar mean velocity and spectrum variance data acquired while tracking an instrumented aircraft during 34 thunderstorm penetrations are presented. Time histories and analysis of turbulence severity, as determined from these radar and aircraft data, are also presented. Whereas use of radar mean velocity in structure function analysis results in underestimation of the actual turbulence severity, radar methods based upon Doppler spectrum variance successfully detect regions of turbulence hazardous to aircraft. The variance-based method, employing a modeled turbulence energy spectrum with a maximum finite eddy size, is found most effective when the turbulence outer scale lies in the range of 1 to 4 km. Classification of turbulence severity as light, moderate, heavy, or severe with a single outer scale value was unreliable. However, classification into composite severity classes, where a composite class combined two or more individual severity classes, was found to be a successful approach for locating hazardous and nonhazardous turbulence regions. Data also show Doppler spectrum variance to be poorly correlated with shear of the radial wind. This shear, resulting from nonturbulence storm structure generally contributed less than 10% of the turbulence contribution to Doppler spectrum variance and could generally be neglected when estimating turbulence severity. A COMPARISON OF MOISTURE VARIABLES IN THE VERTICAL INTERPOLATIONS OF A 4-D ASSIMILATION SYSTEM Annual Scientific Report, 1 Oct. 1983 - 30 Sep. 1984
K. Mitchell and C. H. Yang 11 Apr. 1985 99 p
(AF Proj. 2310)

(AD-A160464; AFGL-TR-85-0090; AFGL-ERP-910) Avail: NTIS HC A05/MF A01 CSCL 12/1

A fundamental activity of numerous numerical weather predictions centers is objective analysis of the global atmosphere. Typically the objective analysis is a product of a four-dimensional global data assimilation system. Such a system includes objective analysis, initialization, and global forecast model components. It is common for the objective analysis to be performed on constant pressure surfaces, while the forecast model operates on the standard sigma coordinate or a close variant. This necessitates vertical interpolations between pressure surfaces and sigma-coordinate surfaces before and after the forecast. This study shows that the choice of moisture variable and interpolation method in the vertical interpolation can be crucial to preserving a reasonable moisture distribution in humidity assimilations. The use of relative humidity, dewpoint (T sub d), and specific humidity are tested in four two-point interpolation methods including linear, logarithmic, exponential, and power law. The standard use of logarithmic interpolation, is shown to be a suitable choice when vertically interpolating RH or T sub d, but a singularly poor choice when interpolating Q. GRA

AN INVESTIGATION OF HURRICANE-INDUCED FORERUNNER SURGE IN THE GULF OF MEXICO Final Report
M. Bunpapong, R. O. Reid, and R. E. Whitaker Sep. 1985 221 p
(Contract DACW39-82-K-0001)
(AD-A160635; CERC-TR-85-5) Avail: NTIS HC A10/MF A01 CSCL 08/3

A system of coupled, normal mode equations describing a two-layer ocean basin of variable depth was derived form the quasi-hydrostatic equations of motion using a general form of the method of Veronis and Stommel (1956). A finite difference, time marching, numerical model for the normal mode equations, employing and Alternating Direction Implicit (ADI) scheme, on a space-staggered grid has been developed. The model is quasi-linear and allows for variable bathymetry and variable Coriolis parameter. The model domain includes the Gulf of Mexico and the Cayman Sea with a resolution of 15'. A no-flow condition is taken at all solid boundaries and the inverted barometer term is used to stipulate barotropic height anomalies on the open boundaries. Hurricanes Carla (1961) and Allen (1980) are used as historical storms to verify the model by comparing numerical and observed hydrographs. A parametric study utilizing three forward speeds, two radii to maximum winds, and five paths characterizing Gulf hurricanes is presented. The results of the study show that volume transports through Florida and Yucatan Straits consisted of in-phase (both in or both out) and out-of-phase components. GRA

DEVELOPMENT AND VALIDATION OF A VERTICALLY TWO-DIMENSIONAL MESOSCALE NUMERICAL MODEL M.S. Thesis
M. K. Walters Aug. 1985 78 p
(AD-A160741; AFIT/CI/NR-85-105T) Avail: NTIS HC A05/MF A01 CSCL 04/2

In this thesis a vertical, two dimensional, grid-point mesoscale model is developed, using the equations of motion and thermodynamics in a dry flow. A nondimensional vertical coordinate is used. The hydrostatic assumption is made. To avoid the sensitivity of the continuity equation, several derived equations are used based on the first law of thermodynamics, the pressure tendency equation, and the top boundary condition, which was that the vertical motion was zero at the top boundary. These derived equations include the equation for prediction of density, Richardson's equation for vertical motion, and the pressure tendency at the top of the model. A simplified calculation of dry, subgrid convection is made to prevent instability. The equations are integrated using explicit finite differences with a time step of 2 minutes. GRA

LIDAR MULTIPLE SCATTERING/DEPOLARIZATION IN STRATUS CLOUDS M.S. Thesis
R. L. Petrilla 1985 77 p
(AD-A160899; AFIT/CI/NR-85-142T) Avail: NTIS HC A05/MF A01 CSCL 04/2

The contributions of multiple scattering to backscattered depolarization ratios in stratus clouds were investigated using a linearly-polarized ruby lidar system from a site on the southern California coast. The effects of the receiver field of view, lidar elevation angle, the transmitter/receiver beam misalignment on depolarization ratios were investigated. Results for a 1 mrad transmitter beam width indicate that a receiver field of view of 3 mrad returns an almost threefold increase in backscattered depolarization ratios as opposed to a 1 mrad field of view. The effects caused by changing the elevation angle appear to be related to the cloud base. Deliberate beam alignment produces significant alterations in the lidar returns, demonstrating the importance of maintaining proper alignment. In the future, the lidar should be used in conjunction with in situ microphysical observations and a program of theoretical studies to assess the degree to which the lidar data can be related to specific stratus cloud properties. CASE STUDIES OF THE STRUCTURE OF THE ATMOSPHERIC BOUNDARY LAYER ENTRAINMENT ZONE Ph.D. Thesis
T. D. Crum 1985 266 p Original contains color illustrations
(AD-A160911; AFIT/CI/NR-85-129D) Avail: NTIS HC A12/MF A01 CSCL 04/2

The structure of the atmospheric entrainment zone, an interfacial layer betweeen the convective boundary layer and the stable air aloft, is studied using data obtained during Boundary Layer Experiment 1983 in Oklahoma. Coincident high resolution aircraft and lidar observations provided a unique picture of the daytime continental entrainment zone. Fast-response Lyman alpha hygrometer output voltages from the aircraft are calibrated to yield meteorological units of humidity. Humidity values indicative of surface layer air are observed at all levels within rising thermals, and the corresponding top-hat humidity cross sections suggest little lateral entrainment. Two approaches are taken to describe the humidity structure of the entrainment zone. The first uses the linear mixing character of specific humidity. This yields vertical profiles of the proportion of surface layer air that are described well by the cumulative distribution function of asymmetrical double exponential functions. The second approach models frequency distributions of three types of air in the entrainment zone: unmixed free atmosphere (dry); unmixed surface layer air (moist); and a mixture of these two. These results can be useful in cloud models and for future studies of the boundary layer. GRA

CALCULATION OF ICE ACCRETION ON CYLINDRICAL RODS ACCORDING TO BAIN'S MODEL, AND COMPARISON WITH EXPERIMENTAL RESULTS
Werner Fuchs (Geophysikalische Beratungsstelle Roth, West Germany), Klaus-Peter Schickel, Josef Kaluza (Geophysikalische Beratungsstelle, Cochem, West Germany), and Kurt Uwira (Bundesamt fuer Wehrtechnik und Beschaffung, Landsberg/Lech, West Germany) Jul. 1985 81 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-970)
(DFVLR-FB-85-46; ISSN-0171-1342) Avail: NTIS HC A05/MF A01; DFVLR, Cologne DM 25.50

Bain's model for the calculation of ice accretion rates was compared with meteorological flight data. The Bain model for the determination of the ice accretion rate on cylindrical rods is extended to the calculation of the accretion shape and velocity in pure water clouds. Ice accretion is measured on an aircraft during flights in stratus clouds. By taking into account the energy balance estimate of Ludlam for the calculation of an upper bound on the spontaneously freezing supercooled liquid water content (LWC), good agreement between the calculated and measured ice accretion is obtained. The effect of higher LWC's on the ice accretion is not proportional, as theory shows. Author (ESA)

(DFVLR-FB-85-48; ISSN-0171-1342) Avail: NTIS HC A04/MF A01

A laser Doppler anemometer on a research platform determined the wind profile above the surface of the North Sea. The measured profiles show nearly constant wind velocities between the sea surface and 100 m height. No logarithmic wind profile is measured. The influence of the platform on the measurements is determined. The influence of the tidal movement is corrected. The laser Doppler anemometer is the only measuring system which allows the simultaneous measurement of wind and water surface velocity. The turbulence is also measured. Author (ESA)

NONLINEAR PARAMETRIC WAVE MODEL COMPARED WITH FIELD DATA M.S. Thesis
J. L. B. S. de Melo Jun. 1985 63 p
(AD-A160004) Avail: NTIS HC A04/MF A01 CSCL 08/3

Wave spectra calculated using the Parameterized Nonlinear Wave Solution developed by Le Mehaute et al., (1984) are compared with field data acquired at Leadbetter beach, Santa Barbara, California. The parameterized solution satisfies the nonlinear free surface boundary conditions to a specified degree of accuracy and is expressed in terms of a converging truncated Fourier series. The wavenumber, surface profile and wave orbital velocities are determined by the wave height and wave period at the local depth of water. Spectral components are compared between the model results and field data. Good agreement is observed for waves corresponding to Ursell numbers ranging from 25 to 75. For large Ursell numbers (strong nonlinear effects) the parameterized model underestimates the data. GRA

RAMAN BACKSCATTERING TECHNIQUE FOR THE REMOTE MEASUREMENT OF SUBSURFACE TEMPERATURE AND SALINITY. VOLUME 1: REVIEW
B. Caputo and D. A. Leonard Dec. 1984 29 p
(Contract N00014-81-C-0725)
(AD-A160095) Avail: NTIS HC A03/MF A01 CSCL 08/10

This report describes the current status of research on the laser Raman technique for the remote sensing of subsurface ocean temperature and salinity. It summarizes the state of the art as it relates to current Navy requirements, showing what it can be used for now, and what further work is required to develop the technique to its full potential. Volume 1, this document provides a management summary of the research program carried out by the contractor. Ships, aircraft and satellites provide alternative and complimentary strategies for measuring the parameters of the marine environment. Subsurface temperature and salinity data obtained from ships and aircraft can be relatively comprehensive and accurate, but it is discrete and separated in time and space. The aim of the current research is to develop the capability to provide ships and aircraft with cost effective remote sensing instrumentation that can provide accurate and continuous subsurface temperature and salinity coverage. The spatial frequencies that would be available, on a quasi-synoptic basis (especially from aircraft), would significantly overlap with those available from

satellite observations of the sea surface, thus enabling comparisons and allowing predictive statements to be developed. GRA

HYDROGRAPHIC DATA FROM THE OPTOMA (OCEAN PREDICTION THROUGH OBSERVATIONS, MODELING AND ANALYSIS) PROGRAM: OPTOMA16, 20 MAY - 23 JUNE 1985 Report, for Oct. 1982 - Aug. 1985
P. A. Wittmann, E. A. Kelley, Jr., and C. N. K. Mooers Aug. 1985 133 p
(AD-A160270; NPS68-85-023) Avail: NTIS HC A07/MF A01 CSCL 08/10

The OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program, seeks to understand the mesoscale (fronts, eddies, and jets) variability and dynamics of the California Current System and to determine the scientific limits to practical mesoscale ocean forecasting. To help carry out the aims of this project, a series of cruises has been planned in two subdomains off northern and central California. Data acquired during Leg MI, Leg MII and Leg A include expendable bathythermographic data and current temperature density data profiles. Bucket surface temperature and water samples for salinity were taken at most CTD stations. These surface values were used for calibration purposes as well as contributions to the data base. Leg A also acquired continuous 2 m thermosalinograph measurements, continuous meteorological data such as atmospheric pressure at a height of 2 m and wind speed and direction at a height of 20 m, and acoustic Doppler velocity data. OPTOMA (OCEAN PREDICTION THROUGH OBSERVATIONS, MODELING AND ANALYSIS) PROGRAM INTERIM REPORT: THE AIRBORNE OCEAN THERMAL STRUCTURE MAPPING PROJECT Report, for Feb. 1983 - Feb. 1985
M. C. Colton and C. N. K. Mooers Aug. 1985 106 p
(AD-A160283; NPS68-85-008) Avail: NTIS HC A06/MF A01 CSCL 08/10

The Ocean Prediction Through Observation, Modeling and Analysis (OPTOMA) Program goals are to develop an ocean descriptive predictive system for studying and forecasting the evolution of ocean mesoscale features and the California Current System. Attainment of these goals requires the establishment of a broad-base ocean observing and monitoring system that includes, hydrographic research cruises, moored arrays, and remotely sensed data, etc. To forecast the evolution of the oceanic flow field, the observing system must include a means of obtaining real-time, synoptic maps for the initialization and verification of the dynamic model(s) used. P3 flights to deploy airborne expendable bathythermographs are a clear choice for frequent mappings. Since Feb., 1983 six OPTOMA missions have been flown. A total of 325 AXBTs have been successfully deployed off the northern and central California coasts. Data analysis reinforce recent discoveries about the character of the California Current System: the current regime is highly variable in nature and is comprised of cool anomalies, mesoscale eddies, 'squirts' and jets, current filaments and fronts. An airborne digital data acquisition system, built around an HP9816 microprocessor and a Sippican MK9 digitizing unit, digitizes the AXBT audio signal, then stores the profiles on diskette. GRA

TIME DURATIONS OF RAIN RATES EXCEEDING SPECIFIED THRESHOLDS
R. O. Berthel and V. G. Plank 24 May 1985 66 p
(AF Proj. 6670)
(AD-A160463; AFGL-TR-85-0122; AFGL-ERP-918) Avail: NTIS HC A04/MF A01 CSCL 04/2

Rainfall may hamper military operations in ways as diverse as the visual detection of enemy movements to the attenuation of sophisticated, electro-optical, weapon-guidance systems. Thus, it would obviously be advantageous to have the ability to predict probable rain-rate intensities from forecast information or, for planning purposes, from climatological data. The rain investigation detailed in this report was conducted with the objective of developing a method for estimating durations and occurrences of rates of specified intensities. The data base consisted of 185 events taken from 31 days of rain-rate measurements. The rate variability of each event was mathematically defined and we found that the individual variabilities did not depend upon the amount of rain or the length of time rainfall occurred. Analysis revealed that variability could be expressed as a percentage of time that rain rates were equal to or exceeded specified threshold levels that were relative to their mean values and could be described by an equation set. Although the diversity of the data negated all attempts to estimate the frequency that specific rate intensities occurred, it was shown that averaged rain-rate date (< or = 10 min) changed predictably with relative measures. Thus, the authors deduced a method by which rain-rate variability, in terms of the percentage of time the rates are > or = intensity levels relative to their means, may be estimated from knowledge or deduction of two parameters, the mean and maximum rates. REVIEW OF THE RAMAN BACKSCATTERING TECHNIQUE FOR THE REMOTE MEASUREMENT OF SUBSURFACE TEMPERATURE AND SALINITY: VOLUME 1 Summary Report
B. Caputo and D. A. Leonard Dec. 1984 29 p
(Contract N00014-81-C-0725)
(AD-A160466) Avail: NTIS HC A03/MF A01 CSCL 17/5

This document is a summary report which describes the current status of research on the laser Raman technique for the remote sensing of subsurface ocean temperature and salinity. The report, in three volumes, summarizes the state of the art as it relates to current Navy requirements, showing what it can be used for now, and what further work is required to develop the technique to its full potential. This document provides a management summary of the research program carried out by Computer Genetics Corporation over a number of years with support provided by several Government agencies including ONR, NRL, NASA and NOAA. The aim of current research is to develop the capability to provide ships and aircraft with cost effective remote sensing instrumentation that can provide accurate and continuous subsurface temperature and salinity coverage. The spatial frequencies that would be available, on a quasi-synoptic basis (especially from aircraft), would significantly overlap with those available from satellite observations of the sea surface, thus enabling comparisons and allowing predictive statements to be developed. The work to date has shown, by means of theoretical calculations, laboratory experiments, and field studies, that polarization Raman spectroscopy is feasible for the remote sensing of ocean temperature to a few tenths of a degree to depths of 50 to 100 meters in the open ocean. A SEMIEMPIRICAL MODEL FOR DOPPLER SPECTRAL FEATURES OF MICROWAVE RADAR SEA SCATTER Interim

Report, Jun. - Oct. 1984
D. B. Trizna 16 Oct. 1985 32 p
(AD-A160576; NRL-8911) Avail: NTIS HC A03/MF A01 CSCL 17/9

A semiempirical, fetch-dependent model is developed for Doppler spectral features of low grazing angle microwave radar sea scatter and is fit to data previously published in the literature. The model introduces this fetch dependence to account for the scatter in plots of the shift of the peak of the radar sea scatter Doppler spectrum data vs measured wind and surface parameters. First, constants for the model are determined by empirically curve fitting generalized versions of J. Darbyshire's fetch model equations to surface truth data (wind speed, wave height, and wave period), plotted in various combinations against one another, for 24 different experimental conditions. These constants are then applied to equations representing the Doppler shift of the peak of the sea scatter spectrum in terms of the surface truth data. Curves parametric in fetch, which are determined from these equations, are then superimposed over plots of the measured radar Doppler peak shifts vs the surface truth. It is found that these curves lie near the same groups of points in these plots of radar data vs surface truth, as the modified Darbyshire curves did for surface truth sets against one another. GRA

DIRECTIONAL WAVE MEASUREMENT AND ANALYSIS Final Report
R. J. Lai and R. J. Bachman Sep. 1985 44 p
(ZF43421001; SF59557695)
(AD-A160760; AD-E401375; DTNSRDC/SPD-1167-01) Avail: NTIS HC A03/MF A01 CSCL 08/3

A directional wave analysis computer program has been developed to analyze the measured directional wave data from an ENDECO Wave-Track buoy. Due to the nature of the buoy, the direction components must be adjusted in order to apply a conventional wave slope analysis. The choice of a Wave-Track buoy stems from the requirement of a light-weight, easy to handle directional sensing wave buoy. The results can be used to validate the directional spread of wave energy produced by the Spectral Ocean Wave Model (SOWM). Also, the resulting directional spread of energy, as produced by the buoy, may now be used with ship motions to produce ship response amplitude operator (RAO's), or combined with ship RAO's to estimate ship motions. The equations are developed to account for buoy motions in a current and in shallow water. Although electronic phase shifts have been adjusted, it is still necessary to develop some analytical solution to compensate for hydrodynamic responses and phase shifts. The analyzed results include frequencies, energy densities, Fourier coefficients, first and second harmonic mean wave directions and root mean square (rms) spreading. Also included is the directional spreading of energy calculated by four different methods. Results have agreed well with other wave measuring buoys as detailed in other sources. Author (GRA)

PHYSICAL OCEANOGRAPHIC CHARACTERISTICS OF THE NARES PLAIN REGION OF THE WESTERN NORTH ATLANTIC
S. C. Riser Aug. 1985 157 p
(Contract DE-AC04-76DP-00789)
(DE86-000059; SAND-85-7186) Avail: NTIS HC A08/MF A01

This document is a summary and synthesis of physical oceanographic observations available from the Nares Abyssal Plain region of the western North Atlantic Ocean. The observations mainly include historical Nansen bottle data obtained from the National Oceanographic Data Center (NODC); conductivity, temperature, and depth (CTD) data and bottom radon data both taken during the Transient Tracers in the Ocean (TTO) experiment; and expendable bathythermograph (XBT) data, moored current/temperature meter data, and SOFAR float data all collected during POLYMODE. Several other, less complete, data sets have also been examined. These data sets have been combined in order to assess the overall physical oceanographic environment of the Nares Plain region. DOE

USSR SPACE LIFE SCIENCES DIGEST, ISSUE 3 Final Report
Lydia Razran Hooke, ed., Mike Radtke, ed., Victoria Garshnek, ed., Joseph E. Rowe, ed., and Ronald Teeter, ed. Dec. 1985 102 p
(Contract NASw-3676)
(NASA-CR-3922(03); NAS 1.26:3922(03)) Avail: NTIS HC A06/MF A01 CSCL 06B

This is the third issue of NASA's USSR Space Life Sciences Digest. Abstracts are included for 46 Soviet periodical articles in 20 areas of aerospace medicine and space biology and published in Russian during the second third of 1985. Selected articles are illustrated with figures and tables from the original. In addition, translated introductions and tables of contents for seven Russian books on six topics related to NASA's life science concerns are presented. Areas covered are adaptation, biospherics, body fluids, botany, cardiovascular and respiratory systems, endocrinology, exobiology, gravitational biology, habitability and environmental effects, health and medical treatment, immunology, life support systems, metabolism, microbiology, musculoskeletal system; neurophysiology, nutrition, perception, personnel selection, psychology, radiobiology, and space physiology. Two book reviews translated from the Russian are included and lists of additional relevant titles available in English with pertinent ordering information are given. Author

METABOLISM OF T-2 MYCOTOXIN BY CULTURED CELLS
L. R. Trusal 18 Sep. 1985 20 p
(DA Proj. 3M1-61102-BS-12)
(AD-A159678; AD-E801193) Avail: NTIS HC A02/MF A01 CSCL 06/20

T-2 mycotoxin is a small (i.e. 466 daltons), non-protein toxin. We studied its metabolism in Chinese hamster ovary (CHO) cells, African green monkey kidney (VERO) cells, human fibroblasts, and L-cells. Confluent cells were exposed to (3H)-T-2(0.01 micrograms/ml) for 1 hr at 37 C. CHO and VERO cells metabolized T-2 a greater extent than the other two cell types. In CHO, fibroblast and L-cells, the major metabolite was HT-2 toxin while, in VERO cells, an unknown metabolite, more polar than T-2, was the major metabolite. Cell and media extracts of CHO and VERO cells revealed smaller amounts of T-2 triol, T-2 tetraol and several unknowns. In both cell types, metabolites were detected in labeled media by 1 hr and in increasing amounts in

unlabeled media by 4 hr. Under the above conditions, 37 to 58% of the radioactivity remained as T-2 toxin after 4 hr in both cell types. The data suggest that some cultured cell lines possess enzyme systems capable of limited metabolism of T-2 mycotoxin to a variety of known and as yet unidentified metabolites. GRA

A selected number of immunobiologically active polypeptides have been found to be closely associated with, but separable from the lipopolysaccharide endotoxin (LPS) in the outer membrane of Gram-negative bacteria. Initially these endotoxin associated proteins (EP) from Bordetella pertussis, Salmonella typhi and Vibrio cholerae were found to enhance the immune response to cholera enterotoxin after immunization with cholera toxiod. At the cellular level, B. pertussis EP (PEP) is a mitogen and polyclonal activator of antibody producing B-lymphocytes of C3H/HeJ mouse lymphocytes which are unresponsive to LPS. PEP can adjuvant in vitro the production of IgM antibody to cholera toxin and sheep erythrocytes by mouse splenic lymphocytes. In control experiments we have shown that the activity of PEP cannot be neutralized by the cationic polypeptide polymyxin B which specifically neutralizes the lipid A component of LPS that is responsible for the simulating properties of LPS. In addition, our tests indicate PEP does not contain any detectable lymphocytosis promoting factor (LPF) activity. Preliminary experiments have shown that extracts of B. pertussis which contain both LPS and associated proteins are protective in the standard mouse model used for testing the efficacy pertussis vaccines. SEQUENCE POLYMORPHISM OF HLA-DR BETA 1 ALLELES RELATING TO T CELL-RECOGNIZED DETERMINANTS
J. S. Cairns, J. M. Curtsinger, C. A. Dahl, S. Freeman, and B. J. Alter 1985 14 p
(Contract N00014-85-K-0004; Grants PHS-AI-17687; PHS-AI-18326; PHS-AI-19007)
(AD-A160237) Avail: NTIS HC A02/MF A01 CSCL 06/3

HLA class II molecules are a highly polymorphic family of dimeric cell surface proteins primarily involved in regulating T cell responses to extrinsic antigens. To define regions of class II molecules involved in T cell recognition, we have compared sequences of three HLA-DR Beta cDNA clones obtained from cells that all express the same serologically defined determinants but differ in terms of T cell-recognized specificities. The comparisons indicate that very few (one to four) nucleotides differ between what are almost certainly alleles of the DR beta 1 Locus. All differences were in the first domain of the molecule and all localized to a region from amino acids 71-86. Since all differences were found only in this region of the molecules, and since DR alpha chains seem to be relatively nonpolymorphic, these positions in the DR beta chain must play a major role in influencing T cell recognition of the DR molecule. Serological and molecular cloning experiments have shown that there are three families of class II molecules within the HLA complex, termed DP, DQ, and DR. For the DR4-DRw53 haplotype which we have studied, within the DR family, one alpha and three complete beta genes are known; one beta gene is a pseudogene. At least two DR alpha beta dimers are expressed. GRA

IDENTIFICATION AND QUANTIFICATION OF THE WATER-SOLUBLE COMPONENTS OF JP-4 AND A DETERMINATION OF THEIR BIOLOGICAL EFFECTS UPON SELECTED FRESH-WATER ORGANISMS Final Technical Report, 30 Sep. 1978 - 27 Feb. 1984
J. D. Bramner and R. L. Puyear 1 Jul. 1985 14 p
(Grant AF-AFOSR-3709-78)
(AD-A160271; AFOSR-85-0743TR) Avail: NTIS HC A02/MF A01 CSCL 07/3

This final technical report includes a brief summary of research performed, results obtained, graduate students supported and theses written. One paper published was of a technical nature and describes the use of reverse-phase C-18 minicolumns for concentrating water soluble hydrocarbons derived from JP-4 jet fuel. Another technical paper using the same technique as the first was used to concentrate water soluble hydrocarbons produced by running an outboard motor in water. Analytical methods used for hydrocarbon separation and identification was GC, GC/MS and HPLC. The toxicity of toluene on the fathead minnow was the basis of three papers and a Ph.D. Thesis. It was found that the embryo was as sensitive to toluene than was the protolarvae or adult fish. This was determined using 96-hr LC50 tests. An MS thesis was written on the effects of toluene on gill structure in the fathead minnow adult. Little effect of toluene on gill structure was noted. A comparative study on the effects of administration of benzene, toluene and xylene isomeres on their in vitro metabolism and various drug metabolizing enzymes in rat liver, and the covalent binding of toluene to rat liver microsomes has resulted in one Ph.D. Thesis and the preparation of three manuscripts for publication. An experimental system using rat caudate slices was used to measure the effects of tyrosine on neuronal activity. Studies demonstrated the importance of adequate tyrosine in sustaining dopamine release and provide the first evidence that when sufficient experimental tyrosine is not provided, its level within catecholaminergic nerve terminals actually declines. The data suggest that when a group of such neurons undergoes sustained activity, its requirements for tyrosine increase dramatically. In such circumstances, normal levels of plasma tyrosine may be inadequate to sustain function. Author (GRA)

Macrophages, granulocytes, and platelets serve in wound debridement, bacterial neutralization, and homeostasis. Replacement of such cells may involve perturbations in the clonogenic cell populations responsible for replenishing specific adult cell populations. For example, the human blood granulocyte progenitor cell compartment is increased following abdominal hysterectomy. In mice, skin wound trauma produced changes in the proliferative cell compartments of the hematopoietic tissues 24 hrs after injury. In this study we report: (1)some of our findings on the hematopoietic clonogenic cell changes in conventional mice after trauma, and (2) circulating substances which may mediate these changes. GRA

HC A02/MF A01 CSCL 06/16

Low contrast, low spatial frequency luminance sawtooth patterns look like luminance staircases, with no brightness changes over the shallower luminance slope. Brightness measurements at corresponding points in different cycles of these patterns showed substantial illusory brightness differences. Other measurements showed that the illusion is not confined to strictly subthreshold luminance gradients, but occur with slightly suprathreshold gradients as well. In models which attempt to explain these illusions the visual system integrates over the thresholded gradient of the stimulus distribution. The integration encounters problems due to curl introduced by the nonlinear threshold operator. Brightness measurements indicated that these problems have a visual counterpart, further support for the models. Several new illusions were found to result from this nonlinear threshold for spatial gradient. Inconsistencies in the spatial integrals performed by the visual system result in multistable brightness perceptions for some patterns. GRA

PRACTICAL APPLICATION OF BASIC RESEARCH ON IMPULSE NOISE HAZARD Final Report
G. R. Price Jan. 1985 12 p
(AD-A160432; HEL-TM-1-85) Avail: NTIS HC A02/MF A01 CSCL 06/19

To assess impulse noise hazard accurately, procedures should be based on the physiological mechanisms underlying hearing loss. Information from basic research studies is relevant in three areas. First, there is a spectrally dependent critical level above which loss mechanisms change from amode that is probably metabolically based to one that is mechanically based. Stimulation at and above this second mode should be avoided. Second, in spite of the regulatory trend ignoring the time pattern of stimulation, studies continue to indicate at that intermittency ameliorates the effect of noise, producing less effect for a given amount of energy in the exposure. Lastly, a variety of sources can be interpreted as indicating that meters designed to rate hazard should have: a rise-time capability in the vicinity of 20 microseconds; a dynamic range of over 100 dB; and employ a frequency weighting function such as A-weighting, although the shape is not critical due to the

relatively sharp tuning of the ear and the generally flat noise spectra commonly encountered in the work place. GRA

Over the last two decades, the Military Ergonomics Division of the US Army Research Institute of Environmental Medicine has been establishing the data base and developing a series of predictive equations for deep body temperature, heart rate and sweat loss responses of clothed soldiers performing physical work at various environmental extremes. This document describes the attempt to program these predictive equations on various desk top and hand held calculators with the express purpose of developing a comprehensive heat stress model for predicting soldier performance to work, clothing and the environment. This model deals with the interaction of various multi-disciplinary factors such as: (1) the theoretical physics of heat transfer, (2) the biophysics of clothing, (3) the physiology of metabolic heat production, distribution and elimination, and (4) related meteorological considerations. The primary physiological inputs are deep body (rectal) temperature and sweat loss while the predicted outputs are the expected physical work-rest cycle, the maximum single physical work time if appropriate, and the associated water requirements. This document presents the mathematical basis employed in the development of the various individual predictive equations of our heat stress model. In addition, our current heat stress prediction model as programmed on the HP 41 CV is discussed from the standpoint of proprietary in meeting the Army's needs and therefore assisting in military mission accomplishment. After World War II an increasing number of aeromedical investigators became interested in the medical problems of space flight, particularly its most challenging aspect: weightlessness. Until 1950 their efforts remained limited to theoretical deliberations and predictions. Beginning in the early fifties, however, researchers began actively to experiment with weightlessness aboard aircraft in vertical diving flights and later by flying Keplerian parabolic trajectories. H.J. von Beckh made the first weightlessness experiments in aircraft with humans and test animals (water turtles) which were published at the 4th International Astronautical Congress in Zurich and in the Journal of Aviation Medicine. Von Beckh's experiments showed that the subjects during weightlessness had by no means a strong fall reflex, as predicted by Haber and Gerathewohl in their theoretical paper, in which they evoked the Weber-Fechner Law. The disorientation and lack of neuromuscular coordination occurs only in the first seconds of weightlessness. Later, the control of the vision sense makes aiming movement possible. The incidence of motion sickness was moderate in the weightlessness flights with the Fighter aircraft Fiat G55 and the F 94 C, because the subjects were tied down in the seat and avoided head movements. Later, in the flights with the cargo aircraft C 131, the incidence was considerably higher, because the subjects could move freely and were even allowed to make somersaults. In a later paper (1959) von Beckh showed that weightlessness decreases the acceleration tolerance. This was reconfirmed many years later when the astronauts suffered orthostatic hypotension after their return to the Earth. GRA

FACTORS WHICH ALTER HUMAN PHYSIOLOGICAL RESPONSES DURING EXERCISE-HEAT ACCLIMATION
K. B. Pandolf, M. N. Sawka, and Y. Shapiro Sep. 1985 22 p
(AD-A160580; USARIEM-M-41/85) Avail: NTIS HC A02/MF A01 CSCL 06/14

Researchers generally agree that high aerobic fitness achieved through physical training will reduce the physiological strain to exercise in the heat, but does not replace the benefits of an exercise-heat acclimation program. In addition, high aerobic fitness is hypothesized as a major factor in the small decay and rapid re-acclimation of individuals after they ceased exercising in hot environments. However, recent work from our laboratory suggests that improved aerobic fitness by physical training must be associated with significant elevations in core temperature during the training process in order to improve exercise-heat tolerance. Two recent studies comparing men and women with similar aerobic fitness indicate no major physiological differences between genders in both humid and dry heat for cardiovascular and thermoregulatory responses to these environments either before or after acclimation. Our laboratory has reported that after exercise-heat acclimation under wet conditions (mild or hot), females tolerate the heat in a more efficient fashion than males while under hot-dry conditions males seem to be at some physiological advantage. Even fewer studies are reported which evaluate physiological differences in heat tolerance to exercise in relation to age. In general, exercise-heat tolerance is reduced in pre-pubertal children (boys and girls) and older adults (men and women) compared to young men and women. However, aerobically fit older adults seem to have far fewer decrements in the performance of exercise in the heat than less fit older adults. GRA

DNA AND PROTEIN STUDIES OF HLA CLASS 2 MOLECULES: THEIR RELATIONSHIP TO T CELL RECOGNITION
M. Segall, J. S. Cairns, C. A. Dahl, J. M. Curtsinger, and S. Freeman 1985 29 p
(Contracts N00014-85-K-0004; PHS-AM-31342)
(AD-A160704) Avail: NTIS HC A03/MF A01 CSCL 06/1

The HLA-D region, encoding class 2 antigens, was first defined based on studies of mixed leukocyte culture (MLC) (Bain, et al. 1964; Bach and Hirschhorn, 1964). In our studies with colleagues (Amos and Bach, 1968; Bach et al., 1969), we were able to suggest that a genetic region encoding molecules that stimulate proliferation in MLC may be linked to, but separate from, the HLA-A and -B loci, i.e., a region such as HLA-D; definitive studies in this regard (Yunis and Amos, 1971) established the existence of the HLA-D region. Great advances have been made in our understanding of this region in recent years utilizing both the tools of molecular genetics and studies of proteins encoded by HLA-D genes. A critical bridge that has not yet been completed concerns the relationship of class II genes and protein products to determinants recognized by T lymphocytes, i.e., the cells responding in MLC. Although the emphasis in this review will be on studies of proteins and of DNA, an introduction to this article also includes our current state of knowledge regarding definition of class II products with T lymphocytes. The inclusion in this volume of several articles on the same topic allows a measure of comfort with such an approach. GRA

GLUCOCORTICOID ANTAGONISM BY ENDOTOXIN: BIOLOGICAL EFFECTS DURING STRESS AND BASIS FOR INHIBITION OF PHOSPHOENOLPYRUVATE CARBOXYKINASE M.S. Thesis
W. B. Huff Aug. 1985 133 p
(AD-A160740; AFIT/CI/NR-85-116T) Avail: NTIS HC A07/MF A01 CSCL 06/20

Bacterial endotoxins produce a variety of pathophysiologic effects by inducing the release of humoral factors from cells of the reticuloendothelial system, primarily macrophages. This study focusses on one particular factor, glucocorticoid antagonizing factor

(GAF). Antagonism was augmented when mice were subjected to conditions of stress where adrenoglucocorticoids are necessary for survival. Mice were sensitized to both toxic endotoxin and irradiated detoxified endotoxin during the stress of cold, heat, and tourniquet shock. Endotoxin, as well as detoxified endotoxin, induced the release of GAF from cells of the RES. Treatment of mice with this GAF-rich serum also resulted in their sensitization to stress. Survival of LPS-poisoned animals subjected to stress could be improved when exogenous hydrocortisone was given prior to the administration of exogenous GAF-rich serum or prior to the release of endogenous GAF in response to endotoxin. Naloxone, a B-endorphin antagonist, failed to increase the survival rate of animals under the experimental conditions investigated.

PLATELET-ENDOTHELIAL FUNCTION IN RELATION TO ENVIRONMENTAL TEMPERATURE Final Report, 1 May 1982 - 1 Mar. 1984
S. P. Bruttig, G. D. Draper, and M. P. Hamlet Mar. 1984 28 p
(DA Proj. 3E1-61101-BS-10)
(AD-A160744; USARIEM-T-6/84) Avail: NTIS HC A03/MF A01 CSCL 06/5

Thromboembolic phenomena are commonly observed in frostbite injury to the microvasculature. Large blood vessel endothelium was used to assess any alterations in platelet-endothelial interaction resulting from low environmental temperatures. Media from bovine endothelial cells (37, 24, 4C) did not cause or enhance platelet aggregation. Yet ADP (120 micrometers) stimulated aggregation of all platelet samples. Bovine and porcine endothelial cells were incubated at 37, 24, 4, and 0.5 C with homologous platelets suspended in Tyrodes at 37, 24, 4, and 0.5 C with homologous platelets suspended in Tyrodes buffer plus albumin, and the rate of ADP-stimulated platelet aggregation was compared with control platelets. Bovine venous endothelial cells (at 37 C) inhibited platelet aggregation more strongly than aortic endothelial cells. This inhibition was blocked by aspirin (7 mM) and was independent of environmental temperature. Porcine endothelial cells also inhibited platelet aggregation. This inhibition (maximal at 37 C) was significantly attenuated by temperatures < or = 24 C. A significant loss of inhibition of platelet aggregation could lower the threshold at which parenchymally-derived nucleotides or other substances from damaged cells can cause aggregation. Thus, in porcine endothelial cells > bovine endothelial cells, a possible mechanism for the thromboembolic action of cold is suggested.

AN EXPERIMENTAL TRIAL TO TEST THE EFFICACY OF TEMAZEPAM TO INDUCE SLEEP AND IMPROVE SUBSEQUENT PERFORMANCE DURING PARTIAL SLEEP DEPRIVATION AND CIRCADIAN RHYTHM DESYNCHRONOSIS M.S. Thesis
J. E. McGhee Jun. 1985 58 p
(AD-A160795; AFIT/CI/NR-85-126T) Avail: NTIS HC A04/MF A01 CSCL 06/15

This thesis presents a strategy for reducing jet lag induced performance degradations by resetting rhythms during prolonged rapid transmeridian flight is studied. Thirty-four aircrew member passengers on a C-141 flight were given temazepam or placebo during the flight from Oklahoma to Saudi Arabia for induction of sleep in a period compatible with sleep cycle at the destination, but out-of-sync with previous patterns set at home station. Mental performance and circadian rhythm patterns were tested per-flight, inflight and post-flight by several measurements including a computerized performance battery. The results indicated that in the temazepam group performance was improved to near baseline levels. The restorative power of temazepam induced sleep during a period of partial sleep deprivation and temazepam's ability to reset circadian rhythms prior to arrival in the new time zone were demonstrated.

A STUDY OF THE FLIGHT ENVIRONMENT COMPONENT OF AIRCREW FATIGUE IN STUDENT NAVIGATORS M.S. Thesis
D. R. Douville Jun. 1985 66 p
(AD-A160796; AFIT/CI/NR-85-128T) Avail: NTIS HC A04/MF A01 CSCL 06/19

One approach to understanding the causes of aircrew fatigue is to devide them into: (1) those related to the unique demands of aircrew tasks or workload, and (2) those related to the unique environment of flight. The pilot not only has to navigate, make radio calls and negotiate instrument landings, but he must do it all in a noisy, vibrating, constantly moving environment. Most studies in aircrew fatigue focus on the workload part of the equation. The study described in this proposal is an attempt to define that part of aircrew fatigue which is due to the flight environment. It also attempts to determine changes in body chemistry produced by the flight environment which might be associated with aircrew fatigue. Navigator students in training at Mather Air Force Base, California fly training missions of similar duration and quality in T-43 aircraft and ground simulators. The difference in fatigue and body chemistries after flights in these two settings represent that which is due to the difference in environments. Using student navigators as subjects, blood samples would be taken before and after: (1) a five hour T-43 (Boeing 737) flight, and (2) a five hour ground simulator mission. Changes in a panel of 26 blood chemistries (including plasma osmolality and carboxyhemoglobin) for each setting would be compared for significant differences. Fatigue would be assessed in each setting using: (1) a subjective fatigue questionnaire, (2) hours of sleep following the mission, and (3) performance (academaic score).

SOME NONOCCUPATIONAL ASPECTS OF SENSORINEURAL LOSS OF HEARING ACUITY: A PROPOSED DESIGN FOR STUDY M.S. Thesis
T. Varley Jun. 1985 42 p
(AD-A160799; AFIT/CI/NR-85-127T) Avail: NTIS HC A03/MF A01 CSCL 06/19

Although the adverse effects of occupationally associated noise on hearing have been well documented, review of the recent literature revealed few studies which have carefully measured the role of nonoccupational loud sound in sensorineural hearing loss. This thesis will measure the strength of association of sensorineural deafness and avocational noise by calculating the odds ratio in a case-comparison design. The prevalence of avocational loud noise activities of a group of 200 cases diagnosed as having sensorineural deafness at retirement from the United States Air Force will be compared with the prevalence of avocational loud noise activities of a group of nondeaf Air Force retirees who have been matched for age, service occupation, family history of hearing loss, personal history of hearing loss and known causes of otic dysfunction. Limitations of the study and anticipated results are discussed.

(AD-A160801; AFIT/CI/NR-85-125T) Avail: NTIS

HC A03/MF A01 CSCL 06/5

This thesis involves the establishment of a registry of all United States astronauts, past and future, plus nonastronaut controls. The registry will record the incidences of malignant neoplastic disease and diabetes mellitus, and the space radiation exposure received. Data will be carefully analyzed to see if there is a dose-related increase in these diseases related to the exposure to ionizing radiation, with an eventual goal of establishing reliable risk estimates related to dose received. The history of cancer related to radiation exposure is summarized, and the space radiation environment briefly described. Physiological changes accompanying space flight and their potential effects on radiation tolerance and carcinogenesis are discussed. The reasons why data from animal experiments and human occupational, medical, and nuclear weapon exposure cannot be extrapolated to the long term health risks of astronauts are discussed at length, and the study instruments for establishing a long term descriptive surveillance study are described. A MODEL OF INHALED GAS AND VAPOR TRANSPORT IN THE HUMAN LUNG Ph.D. Thesis
M. L. Shelley 1985 134 p
(AD-A160829; AFIT/CI/NR-85-143D) Avail: NTIS
HC A07/MF A01 CSCL 06/16

The transport of inhaled gas or vapor in the human lung is theoretically modeled to determine the fraction of inhaled gas or vapor absorbed through the bronchial walls in the conductive zone and the fraction entering alveolated space and undergoing blood/gas exchange. An iterative-analytical approach is used, rather than a numerical one, to generate a large amount of data over a wide range of gas or vapor solubilities and diffusivities. The model applies to gases or vapors of low solubility. Simple analytical expressions are fitted to model results, expressing fractional bronchial absorption and alveolar uptake in terms of gas or vapor solubility and diffusivity. Typical physiological parameters are assumed and only physical properties of the gas or vapor are required for input. Methods are presented which allow estimation of these input values. GRA

REVIEW OF DUODENAL AND GASTRIC ULCER Final Report
F. C. Garland and E. D. Gorham Mar. 1985 23 p
(AD-A160919; NAVHLTHRSCHC-85-9) Avail: NTIS
HC A02/MF A01 CSCL 06/5

Duodenal and gastric ulcer are chronic often recurring conditions that in the past were grouped together as peptic ulcer. Many diverse environmental and genetic factors, which create an imbalance between secretion of acid and pepsin by the stomach and the resistance of the gastrointestinal mucosa may lead to the development of a duodenal or gastric ulcer. Incidence trends and risk factors for these two diseases are different. Reported mortality and hospitalization rates declined markedly for duodenal ulcer from 1970 to 1978, but remained relatively stable for gastric ulcer over the same time period. Recent changes in treatment and diagnosis may account for much of this decline. Several environmental factors associated with duodenal or gastric ulcer have been identified. The principal risk factor for duodenal ulcer is cigarette smoking. Less certain associations with diet, emotional stress, coffee consumption, and occupation have also been reported. Risk of gastric ulcer is also increased by cigarette smoking. Aspirin use, however, is the strongest reported risk factor for gastric ulcer. Uncertain associations between gastric ulcer and alcohol consumption have also been reported. Separate familiar aggregation of duodenal and gastric ulcer indicates that genetic mechanisms leading to the development of these diseases are also distinct. Inheritance patterns for hyperpepsinogenemia I, the Zollinger-Ellison syndrome and several other genetic conditions predisposing to the development of either duodenal or gastric ulcer have been described. If both the time course of the arterial plasma radionuclide concentration and the brain tissue radionuclide concentrations are known, it is possible to calculate the kinetic constants (k1*, k2*, k3*, k4*) of the glucose analogue. In a series of male subjects, arterial blood samples were obtained at frequent intervals immediately following the bolus administration of F-18-FDG and then at less frequent intervals for up to 5 hours after the radionuclide administration. The tissue time course was obtained by making positron emission tomographic scans every three minutes for 30 minutes and then at less frequent intervals for 5 hours. These images were used to construct the time course of (18)F activity in gray and white matter structures. Using these values for the lumped constants and the kinetic constants, the values obtained for the global metabolic rate for glucose in two series of young male subjects were 4.99 + or - 0.23 and 5.55 + or - 0.37 mg/100 g/min when C-11-DG and F-18-FDG were used as tracers respectively. CSCL 05/10

In a recent evaluation of two dichotic listening tasks (DLTs) as predictors of performance in Naval Aviation Undergraduate Pilot Training, results based on one of five scoring methods were presented. The purpose of this report is to provide DLT performance scores using all five scoring methods for comparative purposes to determine the scoring system most economical and efficient for automated scoring and, most sensitive to individual and mean differences. Five scoring methods are described which vary primarily in their treatments of errors, and in their consideration of the importance of sequence effects. Five independent analyses of previously reported data were performed. Results were nearly invariant across all five methods; i.e., intercorrelations among scores across scoring techniques exceeded 0.90. Two of the scoring methods are recommended for purposes of standardizing future analyses of DLT performance, one because of its simplicity

nd ease of application and the other, because it may have reater sensitivity to differences in individual performance. GRA

HE EFFECTS OF BIMODAL PRESENTATION OF STIMULI AND OISE ON TARGET DETECTION Interim Report
. J. Lewandowski and D. A. Kobus 1 Aug. 1985 13 p
AD-A160122; NSMRL-1058) Avail: NTIS HC A02/MF A01 CSCL 7/4

Twenty men are presented background noise and target timuli in either the visual or auditory modality, or in both at once. uditory and visual detection thresholds were lowest when unctionally redundant targets were presented simultaneously in oth modalities. It appeared that two redundant signals collectively mproved sensitivity and reduced uncertainty regarding a choice esponse, thus enabling a reduction in detection threshold. Detection threshold to a single target was not negatively affected when attention was divided between two modalities and noise presented in both. The finding of improved detection in each modality of the bimodal condition is consistent with the coactivation explanation of bimodal facilitation and supports the advantage of a bimodal input approach in tasks such as sonar, radar, and air traffic control. PHYSICAL FITNESS AS A MODERATOR OF COGNITIVE WORK CAPACITY AND FATIGUE ONSET UNDER SUSTAINED COMBAT-LIKE OPERATIONS Technical Report, Aug. 1982 - Mar. 1983
R. J. Pleban, D. A. Thomas, and H. L. Thompson Jun. 1985 20 p
(DA Proj. 2Q1-62717-A-790)
(AD-A160417; ARI-TR-687) Avail: NTIS HC A02/MF A01 CSCL 06/14

A study was devised to investigate the role of physical fitness in moderating both cognitive work capacity and fatigue onset under sustained combat operations. Sixteen male ROTC cadets were followed through a two-and-a-half-day Pre Ranger Evaluation exercise. Prior to the actual start of the exercise the cadets' overall level of physical fitness was assessed by using five fitness indices (Harvard Step Test, chinups, pushups, situps, and two-mile run). Cognitive performance and subjective measures of fatigue state were assessed at regular intervals before, during, and one day after the exercise. The results suggest that fitness may attenuate decrements in cognitive work capacity for certain tasks requiring prolonged mental effort, particularly as the cumulative effects of sleep loss and other stressors begin to mount. Similarly, the results of this study suggest that as overall stress levels increase, fitness may have a beneficial effect in moderating fatigue rate. Fitness did not significantly enhance the recovery process with respect to cognitive work capacity, and actually appeared to hinder recovery from fatigue. GRA

SYSTEM DEVELOPMENT AND EVALUATION TECHNOLOGY: STATE OF THE ART OF MANNED SYSTEM MEASUREMENT Final Report, 1980 - 1982
J. M. Edwards, R. F. Bloom, and P. A. Brainin Feb. 1985 85 p
(Contract MDA903-80-C-0345; DA Proj. 2Q2-63743-A-794)
(AD-A160418; Rept-293-8; ARI-RN-85-20) Avail: NTIS HC A05/MF A01 CSCL 05/8

This report is an up-to-date assessment of the state of the art of manned system measurement. The assessment is based in part on the material presented in the Task 3a report-Review of Manned System Measurement Literature. This report employs a topic outline compatible with the overall measurement model being developed under the present contract. The model is sufficiently representative and comprehensive so that all significant comments and authors have a place in its structure. One of the important uses of this report is the identification of current measurement capabilities and limitations, so that requirements and priorities for the improvement of system-oriented measurement can be delineated. In this review, it became apparent, for example, that measurement models need to be further developed, supported with appropriate human performance data, refined through more consistent and comprehensive applications, and validated by independent corroborations of some kind. Futhermore, the general sense of impracticality, and the need for simplifying assumptions in some cases, strongly suggests a requirement for improving the efficiency of measurement models by reducing the magnitude of effort required in their application. It is envisioned that much time, effort, and money can be saved, irrelevant measurements can be avoided, meaningfulness and utility can be enhanced, and additional applications of the models can be found if several key improvements are made. GRA

MULTIMODAL VERSUS UNIMODAL INFORMATION PROCESSING OF WORDS Interim Report
L. J. Lewandowski, S. Hursh, and D. A. Kobus 29 Jul. 1985 14 p
(AD-A160517; NSMRL-1056) Avail: NTIS HC A02/MF A01 CSCL 17/1

Sonarmen are constantly confronted with information presented simultaneously through different sensory modalities. Verbal information is one type of input to which they are exposed. Little is known regarding the effect of undirected attention when verbal information is presented simultaneously to the auditory and visual modality. The question of interest is how to unimodal and multimodal presentation conditions differentially affect performance? The superiority of any particular modality depends upon the task requirements, response demands and the complexity of the stimuli. Multimodal stimulation facilities the RT of the slower unimodal presentation while providing little if any facilitates to the faster unimodal approach. Sonarmen are exposed to various types of information. Reports of this study and previous studies have shown that the results are task dependent. Therefore, it is important to determine how different types of stimuli interact with modes of presentation and affect sonar performance. GRA

There are two dominant approaches to understanding human memory, one in the tradition of Ebbinghaus, the other in the tradition of Bartlett. The former approach views learning as the formation of associations, while in the latter views memory as the process of reconstruction of fragments based on prior knowledge. These positions are often considered antithetical: Ebbinghaus was concerned with laws of memory and tried to control for prior knowledge; Bartlett was concerned with how our world knowledge interacts with learning and memory. This paper argues that one can collect data that supports either position because people can adopt one of several memory strategies. Data are reviewed that ilustrate that the same knowledge structure can produce dramatically different results, depending on the strategies that operate on that structure. Author (GRA)

AN INVESTIGATION INTO EFFECTS OF ENVIRONMENTAL CHANGES ON LOCUS OF CONTROL M.S. Thesis
S. A. Answay Sep. 1985 66 p
(AD-A160861; AFIT/GLM/LSB/85S-2) Avail: NTIS
HC A04/MF A01 CSCL 05/10

Past research suggest that relationships exist between Type A personality, stress, and coronary heart disease. This thesis determined that Type A individuals are inclined to experience more stress than Type B individuals in similar situations. A relationship was found between Type A behavior and internal locus of control indicating that individuals with internal locus of control are more likely to be Type A personalities than type B personalities. Relationships were also found among Type A behavior, internal locus of control, and assertiveness indicating that Type A individuals are more assertive than Type B individuals. Family inventory was inversely related to locus of control inferring that internal locus of control individuals are more satisfied with their personal relationships than are external locus of control individuals. Because family inventory was also inversely related to stress, when stress is present in one area of an internal locus of control individuals' life, the individual looks to other areas of his life for satisfaction. No relationship was found between stress and assertiveness indicating that assertive individuals deal more effectively with stressful situations. This investigation also determined that as the environment changes to a more structured rigid environment, the individual shifts from an internal to an external locus of control. These determinations were based on statistical analysis using Pearson Correlations, Paired t-Tests, and Regression Analysis. Author (GRA)

SERVO OPERATED ANTI-G SUIT PRESSURIZATION SYSTEM Patent
R. J. Crosbie and P. R. Edwards, inventors (to Navy) Issued 13 Aug. 1985 7 p Supersedes AD-D011468
(AD-D011932; US-Patent-4,534,338; US-Patent-Appl-SN-613497; US-Patent-Class-128-1) Avail: US Patent and Trademark Office
CSCL 06/17

A servo operated system for controlling pressurization of an aircraft pilot's anti-G suit during high energy maneuvers has a servo operated control valve and a feedback loop controller for minimizing pressure lag in the suit. The controller has dual modes of operation: one for normal flight conditions and one for combat flight conditions. The normal flight mode provides nominal G-protection while the combat mode provides faster response by prepressurizing the anti-G suit to a base level and lowering the G-force threshold. While in the combat mode, the crewman may select an adjustment pulsating signal to be superimposed on the prepressurization level to obtain additional comfort. Alternatively, he may select a superimposed pulsating signal which is synchronized with his own heartbeat to reinforce the pumping action of the heart. GRA

DESIGN GUIDELINES FOR CARBON DIOXIDE SCRUBBERS, REVISION A
M. L. Nuckols, A. Purer, and G. A. Deason Jul. 1985 77 p
(AD-A160181; NCSC-TECH-man-4110-1-83-Rev-A) Avail: NTIS
HC A05/MF A01 CSCL 06/11

Design data and guidelines are presented to help predict the performance of axial flow carbon dioxide canister designs using alkali metal hydroxide absorbers. The design data are derived from a large series of laboratory tests conducted at the Naval Coastal Systems Center to isolate the effects of environmental and goemetric parameters on canister absorption efficiency. Sample canister designs are considered to demonstrate the use of the derived data to predict effective canister life and pressure drop levels. Alternative techniques for the sorption of carbon dioxide are also reviewed. GRA

INDEPENDENT STUDY OF AUTOMATION AND ROBOTICS FOR THE NATIONAL SPACE PROGRAM BY THE AUTOMATION AND ROBOTICS PANEL
25 Feb. 1985 138 p
(Grant NAGw-629)
(NASA-CR-176523; NAS 1.26:176523; DE85-902185; CSI-85-01)
Avail: NTIS HC A07/MF A01 CSCL 05H

Methods are suggested for promoting continual growth in space station automation and robotics. Initial operation capability (IOC) space station design criteria are emphasized that will allow for ever-increasing levels of automation. The required technology advancement in robotics are described. The need is explained for improved human-machine interfaces, manipulators and sensors, and their combination with Earth developed robot technology into hybrid systems. The needed research base in computer science, artificial intelligence, and applied mathematics is discussed. Effects on private and Government Sectors are explained. It is shown that the Station will provide broader opportunities in time, space and society. Organizational recommendations are given for meeting Congressional goals for space station automation and robotics. DOE

MULTIGRID METHOD FOR NEARLY SINGULAR AND SLIGHTLY INDEFINITE PROBLEMS Final Report
Achi Brandt (Weizmann Inst. of Science, Rehovot, Israel) and Shlomo Taasan Nov. 1985 37 p refs Submitted for publication
(Contracts NAS1-17070; NAS1-18107; Grant AF-AFOSR-84-0070)
(NASA-CR-178026; ICASE-85-57; NAS 1.26:178026) Avail: NTIS
HC A03/MF A01 CSCL 12A

This paper deals with nearly singular, possibly indefinite problems for which the usual multigrid solvers converge very slowly or even diverge. The main difficulty is related to some badly approximated smooth functions which correspond to eigenfunctions with nearly zero eigenvalues. A correction to the usual coarse-grid equations is derived, both in the correction scheme and in the full approximation scheme. The performance of the new algorithm

using this correction is essentially as that of usual multigrid for definite problems. Author

FACTORIZATION AND REDUCTION METHODS FOR OPTIMAL CONTROL OF DISTRIBUTED PARAMETER SYSTEMS Final Report
John A. Burns and Robert K. Powers Nov. 1985 104 p refs
Submitted for publication Prepared in cooperation with Virginia Polytechnic Inst. and State Univ., Blacksburg
(Contracts NAS1-17070; NAS1-18107; Grants NSF ECS-81-09245; AF-AFOSR-85-0287)
(NASA-CR-178033; ICASE-85-58; NAS 1.26:178033) Avail: NTIS HC A06/MF A01 CSCL 12A

A Chandrasekhar-type factorization method is applied to the linear-quadratic optimal control problem for distributed parameter systems. An aeroelastic control problem is used as a model example to demonstrate that if computationally efficient algorithms, such as those of Chandrasekhar-type, are combined with the special structure often available to a particular problem, then an abstract approximation theory developed for distributed parameter control theory becomes a viable method of solution. A numerical scheme based on averaging approximations is applied to hereditary control problems. Numerical examples are given. Author

PARALLEL DIRECT METHODS FOR SOLVING BANDED LINEAR SYSTEMS Research Report
Y. Saad and M. H. Schultz Aug. 1985 25 p
(Contract N00014-82-K-0184)
(AD-A160148; YALEU/DCS/RR-387) Avail: NTIS HC A02/MF A01 CSCL 09/2

This paper proposes several implementations of Gaussian elimination for solving banded linear systems on multiprocessors. Three simple computer architectures are considered: a multiprocessor ring, a grid array and a hypercube, This complexity analysis fully accounts for communication delays by using simple mathematical models where both latency and actual transfer times are incorporated. When the number of processors is small relative to the bandwidth of the system a row interleaved implementation of Gaussian elimination algorithm is attractive. Otherwise, a two-dimensional grid is essential for achieving higher speed-up. The hypercube architecture gives the smallest communication latency times. Author (GRA)

(AD-A160234; AFOSR-85-0783TR) Avail: NTIS HC A02/MF A01 CSCL 09/2

The major issues involved in modeling modern computer systems can be broadly classified into those arising form the model construction, model reduction and solution, and in the interpretation of the model solution. Modeling languages such as fault trees, the PMS notation, and Extended Stochastic Petri Nets can be valuable in simplifying the task of model construction. The goal of the languages is to provide well defined constructs to the user and let the modeling package automatically generate the details of the underlying stochastic model. The language constructs should correspond closely to the system constructs, and yet should produce a concise representation. Specifying the relevent details of the system being modeled can require a tremendous number of states to be considered (in excess of 100,000). Techniques must be developed to reduce the model to one that is computationally tractable, and then to solve the reduced model in a computationally efficient manner. Once the solution is obtained, it must be interpreted carefully. The errors introduced by the model reduction step and in the solutions must be bounded, and sensitivity of the solution with respect to input parameters should be estimated. Author (GRA)

FINAL EVALUATION OF THE LIGHT PEN AS THE KEY COMPONENT IN A MICROCOMPUTER-BASED SIMULATOR Research Note, Feb. 1984 - Jul. 1985
B. W. Thomas and J. E. Schroeder Sep. 1985 31 p
(DA Proj. 2Q2-63743-A-794)
(AD-A160461; ARI-RN-85-90) Avail: NTIS HC A03/MF A01 CSCL 09/2

The US Army Research Institute's Fort Benning Field Unit is currently developing a low-cost, part-task simulator/trainer that will train different weapon systems. The Multipurpose Arcade Combat Simulator (MACS) uses a specially designed light pen as the key component to determine where a weapon is aimed. In a previous study, Schroeder and Cook (1983) investigated the effects of a number of variables on the reliability of a prototype light pen (e.g., ambient light, glare, distance from the monitor to the light pen, screen brightness, screen color, equipment warm-up, and trigger switch closure). Subsequently, the light pen hardware was improved. The major purpose of the present work was to replicate the earlier light pen evaluation with the newly improved light pen. A second goal was to assess the accuracy of the new light pen on two different microcomputers. The new light pen was found to be significantly more reliable than its predecessor on both microcomputers and well within the acceptable limits of accuracy for a marksmanship. GRA

INTERACTIVE GRAPHICS UTILITY FOR ARMY NEC (NUMERICAL ELECTROMAGNETICS CODE) AUTOMATION (IGUANA): USER'S GUIDE Final Report
J. Strauch and S. Thompson Sep. 1985 137 p
(Contract N66001-83-D-0094)
(AD-A160605; NOSC-CR-308) Avail: NTIS HC A07/MF A01 CSCL 09/2

The Interactive Graphics Utility for Army NEC Automation (IGUANA) is a system designed to reduce the time required for antenna model evaluation by providing partial automation to both the data entry and the data display processes. Previous to this system, the use of existing Numerical Electromagnetics Code (NEC) for antenna evaluation required a lengthy, tedious and error-prone process involving manual measurement of three-dimensional coordinates of each significant point of the desired input structure from scale drawings (generally only Top and Side Views are available), and manual entry via keyboards. The input structures are in the form of wire models. The NEC code requires that each wire be entered individually with both end points, radius and segmentation. Complex models often required several weeks of effort to correct measurement and keyboard errors. IGUANA is provided as an aid to NEC input preparation and output display - it performs no antenna evaluations itself. This User's Guide has been prepared to explain the capabilities, functions, and operation of IGUANA. GRA

MICROCOMPUTER-BASED LOCAL AUTOMATION MODEL: FUNCTIONAL DESCRIPTION
R. W. Hartt and D. J. OConnor Oct. 1985 88 p
(Contract MDA903-85-C-0139)
(AD-A160610; LMI-DL503) Avail: NTIS HC A05/MF A01 CSCL 09/2

The Microcomputer-based Local Automated Model (MicroLAM) project will demonstrate the integration of a local collection management system with access to remote bibliographic data bases. Through an intelligent gateway processor, users of the system will be able to access a local catalog and the Defense Technical Information Center (DTIC) Technical Reports (TR) data base simultaneously. The system will consist of a commercial software package (for local collection management) integrated with a subset of the Lawrence Livermore National Laboratory (LLNL) Technology Information System (an intelligent gateway). The intelligent gateway permits sharing of bibliographic resources between the network of technical libraries and information centers within the Department of Defense (DoD) and the DOD technical information clearinghouse -- DTIC. Contained in this functional description are summary description, detailed characteristics and operating environment of the system, as well as the cost factors and development schedule of the LAM project. GRA

INGRID: A THREE-DIMENSIONAL MESH GENERATOR FOR MODELING NONLINEAR SYSTEMS

W. Stillman and J. O. Hallquist Jul. 1985 227 p
ontract W-7405-eng-48)
E86-000749; UCID-20506) Avail: NTIS HC A11/MF A01
INGRID generates complete input files for the codes DYN-D, NIKE3D, FACET, and TOPAZ3D. Geometries are described marily using index space concepts which came from the program GEN. The ideas used in INGEN were reworked into a new ethod which is both simple and powerful. Interactive graphics in GRID are patterned after TAURUS, a three-dimensional post-ocessor, and MAZE, a two-dimensional mesh generator. Much the coding from MAZE is directly incorporated in INGRID. The access to the main memory of a vector processor ystem was investigated with analytical models, measurements n a double processor system CRAY X-MP, and simulations. Single rocessor systems and multiprocessor systems with shared emory are investigated. Long sequences of accesses to memory ells whose addresses differ from each other by a constant istance, as they typically appear in vector processors are mphasized. The conditions under which an access flow with a istance d1 and two access flows with distances d1 and d2 can, ithout conflict, enter a multifold memory with different sections, re determined. COMPUTER SYSTEM MODELLING USING A COMMERCIAL SOFTWARE PACKAGE Abstract Only
Edith Csontos 1984 2 p
Avail: Issuing Activity

This project was undertaken to model a computer system using queueing network models implemented in a commercially available software package BEST1/MVS (BGS Systems). A base-line model was constructed from measured data with a supplementary package CAPTURE/MVS. The validated base-line model was converted to describe a planned, new configuration including two loosely coupled CPU-s and additional, faster disks. The workload was split between the two systems and several assumptions were accepted regarding system overheads. The new models were then used to predict the performance parameters of the new configuration. Author

(NASA-TM-87170; E-2808; NAS 1.15:87170) Avail: NTIS HC A03/MF A01 CSCL 09B

The development of multiprocessor simulations from a serial set of ordinary differential equations describing a physical system is described. Degrees of parallelism (i.e., coupling between the equations) and their impact on parallel processing are discussed. The problem of identifying computational parallelism within sets of closely coupled equations that require the exchange of current values of variables is described. A technique is presented for identifying this parallelism and for partitioning the equations for parallel solution on a multiprocessor. An algorithm which packs the equations into a minimum number of processors is also described. The results of the packing algorithm when applied to a turbojet engine model are presented in terms of processor utilization. Author

SOME PROPERTIES OF n-DIMENSIONAL TRIANGULATIONS
C. L. Lawson 15 Jun. 1985 35 p refs
(Contract NAS7-918)
(NASA-CR-176535; JPL-Pub-85-42; NAS 1.26:176535) Avail: NTIS HC A03/MF A01 CSCL 09B

A number of mathematical results relevant to the problem of constructing a triangulation, i.e., a simplicial tessellation, of the convex hull of an arbitrary finite set of points in n-space are described. The principal results achieved are: (1) a set of n+2 points in n-space may be triangulated in at most 2 different ways; (2) the sphere test defined in this report selects a preferred one of these two triangulations; (3) a set of parameters is defined that permits the characterization and enumeration of all sets of n+2 points in n-space that are significantly different from the point of view of their possible triangulation; (4) the local sphere test induces a global sphere test property for a triangulation; and (5) a triangulation satisfying the global sphere property is dual to the n-dimensional Dirichlet tesselation, i.e., it is a Delaunay triangulation. REDUCTION OF THE EFFECTS OF THE COMMUNICATION DELAYS IN SCIENTIFIC ALGORITHMS ON MESSAGE PASSING MIMD ARCHITECTURES Final Report
Joel H. Saltz, Vijay K. Naik, and David M. Nicol Jan. 1986 38 p refs Submitted for publication
(Contracts NAS1-17070; NAS1-18107)
(NASA-CR-178044; ICASE-86-4; NAS 1.26:178044) Avail: NTIS HC A03/MF A01 CSCL 09B

The efficient implementation of algorithms on multiprocessor machines requires that the effects of communication delays be minimized. The effects of these delays on the performance of a model problem on a hypercube multiprocessor architecture is investigated and methods are developed for increasing algorithm efficiency. The model problem under investigation is the solution by red-black Successive Over Relaxation [YOUN71] of the heat equation; most of the techniques described here also apply equally well to the solution of elliptic partial differential equations by red-black or multicolor SOR methods. Methods for reducing communication traffic and overhead on a multiprocessor are identified and results of testing these methods on the Intel iPSC Hypercube reported. Methods for partitioning a problem's domain across processors, for reducing communication traffic during a global convergence check, for reducing the number of global convergence checks employed during an iteration, and for concurrently iterating on multiple time-steps in a time-dependent problem. Empirical results show that use of these models can markedly reduce a numewrical problem's execution time. Author

PERFORMANCE EVALUATION OF THE JRS AUTOMATIC MICROCODE GENERATING SYSTEM M.S. Thesis
T. J. Newton Jun. 1985 121 p
(AD-A159671) Avail: NTIS HC A06/MF A01 CSCL 09/2

The purpose of this thesis was to evaluate the performance of microcode automatically generated from a high level language. The performance of the generated microcode was compared to the performance of Fortran code on the VAX 11/780 to see if any increase in throughput could be attained by using the microcoded version. The factors affecting the automatic generation of microcode: compaction, optimization, cost, and machine independence are discussed. This is followed by a definition of the testing areas, description of the tests, and a description of the performance evaluation methods. The tests showed that the automatically generated microcode does not always out perform FORTRAN. In general, the FORTRAN code was better for mathematical calculations while the automatically generated microcode was better for bit manipulation and sorting/searching type applications. A SURVEY OF PROPERTIES OF RELATIONS WHICH HAVE THE CONFLUENCE PROPERTY M.S. Thesis
U. Ozkan Jun. 1985 62 p
(AD-A159673) Avail: NTIS HC A04/MF A01 CSCL 12/1

The confluence property arises in a number of areas of Computer Science; from its origins in the lambda-calculus to its use in the theory of abstract data types and term rewriting systems. Its abstract properties and its application to a number of problems, such as algebraic specifications of abstract data types and term rewriting systems, are surveyed here. In the first chapter, surveys the historical work that brought the Church-Rosser property into the literature. The second chapter introduces the idea of confluence and its relation to the Church-Rosser property. The rest of this chapter is on theorems related to confluence. The third chapter discusses the algebraic specification of abstract data types which provides the background to move into the study of term rewriting systems which is the second part of the third chapter. The last chapter discusses an algorithm for showing that a given axiom set (as rewrite rules) is confluent. This procedure is called the Knuth-Bendix completion algorithm. GRA

ON THE INTEGRATION OF LOGIC PROGRAMMING AND FUNCTIONAL PROGRAMMING M.S. Thesis
R. E. Rhodes Jun. 1985 72 p
(AD-A159751) Avail: NTIS HC A04/MF A01 CSCL 09/2

Two programming paradigms, logic programming and functional programming, are discussed in detail with emphasis on the particular advantages and disadvantages of each paradigm. The integration of these two programming paradigms is explored based on the notion that declarative sorts of knowledge (facts and logical relationships) should be expressed in a declarative way, and that procedural sorts of knowledge (manipulation, control, and utilization of knowledge) should be expressed in a procedural way. Toward this end, the conceptual framework for an integrated language is established, and the basic features of the language are outlined. Author (GRA)

A MODIFIED FRONTAL TECHNIQUE SUITABLE FOR PARALLEL SYSTEMS Technical Report
R. G. Melhem Jul. 1985 21 p
(Contract N00014-85-K-0339)
(AD-A159769; ICMA-85-84) Avail: NTIS HC A02/MF A01 CSCL 12/1

Frontal techniques offer the potential for processing the assembly and the factorization phases of finite element analysis in parallel systems. However, the rows of the stiffness matrix are assembled and factored in different orders, thus depriving frontal solvers of the uniformity desired in parallel processing. On the other hand, band solution techniques handle the factorization phase in a very uniform way but do not interleave assembly and factorization. This paper, suggests a technqiue that borrows from both frontal and band solvers those characteristics that are advantageous for parallel processing. Moreover, book keeping and data manipulation are simpler in the suggested technique than in the classical frontal method. This makes the suggested technique also attractive for sequential systems. ALGORITHMIC STUDY ON SYSTOLIC ARRAY STRUCTURES M.S. Thesis
L. J. de Souza Jun. 1985 196 p
(AD-A160006) Avail: NTIS HC A09/MF A01 CSCL 09/2

Computation bound problems impose a severe burden the CPU. In order to speed up computation, specific problems that are identified as the main burden can be done using parallel processing. In this way, the time consuming tasks can be executed on specially tailored hardware. This hardware is designed to implement an algorithm-oriented parallel-processing structure that works more efficiently than the CPU for these specific tasks. This thesis is a study of the mapping of the algorithms onto a kind of structure called systolic array. The development and utilization of a software tool designed to assist on such analysis is presented here. This tool, named Systolic Array Graphics Simulator (SYSGRAS), has the capability to represent any type of systolic array, no matter how complex the cells and structure are. Because of the capability of SYSGRAS, an interactive computer program

simulator, the study of systolic arrays is simplified. The complexity of the time-space relationships is analyzed with the help of some color-graphics techniques. The visualization of the data interaction is thus enhanced and the user is alleviated from the burden of keeping track of partial results and can dedicate attention to the processing algorithm. REPLICATION AND FAULT-TOLERANCE IN THE ISIS SYSTEM, REVISED
K. P. Birman Mar. 1985 27 p
(Contract MDA903-85-C-0124; Grant NSF DCR-84-12582)
(AD-A160039; CU-CSD-TR-85-668) Avail: NTIS HC A03/MF A01

The ISIS system transforms abstract type specifications into fault-tolerant distributed program implementations while insulating users from the mechanisms used to achieve fault-tolerance. This paper discusses techniques for obtaining a fault-tolerant implementation from a non-distributed specification and for achieving improved performance by concurrently updating relicated data. The system itself is based on a small set of communication primitives, which are interesting because they achieve high levels of concurrency while respecting higher level ordering requirements. The performance of distributed fault-tolerant services running on this initial version of ISIS is found to be nearly as good as that of nondistributed fault-intolerant ones. Author (GRA)

COMPUTER-AIDED DESIGN OF ROBUST DECENTRALIZED CONTROLLERS Final Report, Sep. 1984 - May 1985
H. C. Razavi, R. K. Mehra, and M. Vidyasagar Aug. 1985 57 p
Prepared in cooperation with Waterloo Univ., Ontario
(Contract F33615-84-C-3619)
(AD-A160118; AFWAL-TR-85-3046) Avail: NTIS HC A04/MF A01 CSCL 01/3

Significant progress was made on all of the tasks proposed for the Phase 1 (feasibility) effort. In addition to the four tasks that were originally proposed, a new subtask on simultaneously stabilizing controllers was included, and a model of a flexible structure was used for which two types of fault tolerant controllers were designed. The concept of fixed modes was extended to that of a decentralized fixed determinant and significant new results for characterizing fixed determinants were obtained. A characterization of all decentralized controllers was obtained based on which conditions for the existence of robust decentralized controllers were derived, in case of a two channel system. Finally, an iterative solution (of nonlinear programming type) was proposed for optimal decentralized filtering of a two-channel system. In this way a firm foundation was laid in Phase 1 based on which a state-of-the-art approach to computer-aided design of robust decentralized control problems can be carried out. Author (GRA)

ON USING INVERTED TREES FOR UPDATING GRAPH PROPERTIES
S. Pawagi and I. V. Ramakrishnan May 1985 21 p
(Contracts F49620-83-C-0082; N00014-84-K-0530; Grant NSF ECS-84-04399)
(AD-A160135; CAR-TR-117; CS-TR-1492; AFOSR-85-0822TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

Fast parallel algorithms are presented for updating connected components and bridges of an undirected graph when a minor change has been made to the graph, such as addition or deletion of vertices and edges. The matching model used is a parallel random access machine which allows simultaneous reads but prohibits simultaneous writes into the same memory location. The algorithms described in this paper require O (log n) time and use C (n-squared) processors. These algorithms are efficient when compared to previously known algorithms for finding connected components and bridges that require O(log squared n) time and use 0 (n-squared) processors. The previous solution is maintained using an inverted tree (a rooted tree where a node points toward its parent) and after a minor change the new solution is rapidly computed from this tree. GRA

COMPARING THE EFFECTIVENESS OF SOFTWARE TESTING STRATEGIES
V. R. Basili and R. W. Selby, Jr. May 1985 73 p
(Grant NsG-5123; Contract F49620-80-C-0001)
(NASA-CR-176511; NAS 1.26:176511; AD-A160136; CS-TR-1501; AFOSR-85-0805TR) Avail: NTIS HC A04/MF A01 CSCL 09B

This study compares the results of code reading, functional testing, and structural testing in three aspects of software testing: fault detection effectiveness, fault detection cost, and classes of faults detected. Thirty two professional programmers and 42 advanced students applied the three techniques to four unit-sized programs in a fractional experimental design. The major results of this study are the following: (1) With the professional programmers, code reading detected more software faults and had a higher detection rate than did functional or structural testing, while functional testing detected more faults than did structural testing, but functional and structural testing were not different in fault detection rate, (2) In one advanced student subject group, code reading and functional testing were not different in faults found, but were superior to structural testing, while in the other advanced student subject group there was no difference among the techniques. (3) With the advanced student subjects, the three techniques were not different in fault detection rate. (4) Number of faults observed, fault detection rate, and total effort in detection depended on the type of software tested. (5) Code reading detected more interface faults than did the other methods. (6) Functional testing detected nor control than did the other methods. (7) When asked to estimate the percentage of faults detected, code readers gave the most accurate estimates while functional testers gave the least accurate estimates. Appendix B includes the source code for the word. GRA

AN EFFICIENT, RLS (RECURSIVE-LEAST-SQUARES) DATA-DRIVEN ECHO CANCELLER FOR FAST INITIALIZATION OF FULL-DUPLEX DATA TRANSMISSION
J. M. Cioffi and T. Kailath Jun. 1985 6 p
(Contract F49620-79-C-0058)
(AD-A160177; AFOSR-85-0762TR) Avail: NTIS HC A02/MF A01 CSCL 17/2

Computationally efficient Recursive-Least-Squares (RLS) procedures are presented specifically for the adaptive adjustment of the Data-Driven Echo Cancellers (DDECs) that are used in voiceband full-duplex data transmission. The methods are shown to yield very short learning times for the DDEC while they also simultaneously reduce computational requirements to below those required for other least-square procedures, such as those recently proposed by Salz (1983). The new methods can be used with any training sequence over any number of iterations, unlike any of the previous fast-converging methods. The methods are based upon the Fast Transversal Filter (FTF) RLS adaptive filtering algorithms that were independently introduced by the authors of this paper; however, several special features of the DDEC are introduced and exploited to further reduce computation to the levels that would be required for slower-converging stochastic-gradient solutions. Several trade-offs between computation, memory,

learning-time and performance are also illuminated for the new initialization. Author (GRA)

QUANTITATIVE EVALUATION OF SOFTWARE METHODOLOGY
V. R. Basili Jul. 1985 22 p
(Grant NsG-5123; Contract F49620-80-C-0001)
(NASA-CR-176522; NAS 1.26:176522; AD-A160202; CS-TR-1519; AFOSR-85-0803TR) Avail: NTIS HC A02/MF A01 CSCL 09B

This paper presented a paradigm for evaluating software development methods and tools. The basic idea is to generate a set of goals which are defined into quantifiable questions which specify metrics to be collected on the software development and maintenance process and product. These metrics can be used to characterize, evaluate, predict and motivate. They can be used in an active as well as passive way by learning from analyzing the data and improving the methods and tools based upon what is learned from that analysis. Several examples were given representing each of the different approaches to evaluation. Author (GRA)

CONFLICT SENSITIVITY OF ALGORITHMS. PART 1: A CRAY X-MP STUDY Interim Report
D. A. Calahan 15 Mar. 1985 27 p
(Grant AF-AFOSR-0096-84)
(AD-A160206; SARL-7-Pt-1; AFOSR-85-0764TR-Pt-1) Avail: NTIS HC A03/MF A01 CSCL 09/2

The delay of algorithm execution due to memory conflicts in a 16-processor CRAY X-MP extension is considered. The association between memory access delays of reads and writes, and delays in the resultant algorithm execution is studied by defining an incremental algorithm delay sensitivity and relating it to simulated large-delay and random variations. It is shown that, by division algorithms with zero incremental sensitivity, library software highly resistant to large delays may be achieved in a multiprocessor X-MP. Author (GRA)

FOUNDATIONS OF KNOWLEDGE FOR DISTRIBUTED SYSTEMS
M. J. Fisher and N. Immerman Sep. 1985 10 p
(Contract N00014-82-K-0154; Grant NSF DCR-84-05478)
(AD-A160233; TR-426) Avail: NTIS HC A02/MF A01 CSCL 09/2

Halpern and Moses present an interesting discussion of knowledge and common knowledge and common knowledge for distributed systems. They argue that while common knowledge is desirable, it is unattainable in certain settings. They suggest a hierarchy of weakened versions of common knowledge and discuss when these can be achieved. One difficulty with the Halpern and Moses paper is that it is informal and the concepts dealt with are not rigourous defined. Given one interpretation, their theorems are true as claimed, but given another, the opposite occurs, as we show with appropriate counterexamples. Thus, their theorems are not wrong in spirit, but the concepts are subtle and the terms must be more carefully defined. This paper gives quite general and precise definitions of distributed protocol, knowledge and common knowledge. It also provides precise settings and rigorous proofs for many of the results in Halpern's and noses' paper. This paper proposes some alternate definitions in which the same results become false. The authors desire to develop a way to design clear distributed algorithms and write clear proofs about them. GRA

PARALLEL MATRIX COMPUTATIONS Interim Report, Apr. 1984 - Apr. 1985
G. W. Stewart and D. P. OLeary Apr. 1985 14 p
(Grant AF-AFOSR-0078-82)
(AD-A160240; AFOSR-85-0820TR) Avail: NTIS HC A02/MF A01 CSCL 09/2

This project concerns the design and analysis of algorithms to be run in a processor-rich environment. It focuses primarily on algorithms that require no global control and that can be run on systems with only local connections among processors. The properties of these algorithms both theoretically and experimentally are investigated. The experimental work is done on the ZMOB, a working parallel computer operated by the Laboratory for Parallel Computation of the Computer Science Department at the University of Maryland. The emphasis is on two areas: (1) Dense problems from numerical linear algebra; and (2) The iterative and direct solution of sparse linear systems. GRA

A PERFORMANCE MEASUREMENT METHODOLOGY FOR SOFTWARE MULTIPLE-BACKEND DATABASE SYSTEMS Report, for Feb. 1983 - Feb. 1985
J. R. Vincent Jun. 1985 142 p
(AD-A160284) Avail: NTIS HC A07/MF A01 CSCL 09/2

Software multiple-backend database systems provide high-performance, cost-effective database management support for systems with very large and growing databases. One backend computer, called the backend controller (or, briefly, controller), controls transaction processing of the remaining backend computers, i.e., backends, and interfaces with the host computers. These systems are designed to provide performance-gain and capacity-growth potential by increasing the number of backends connected to their controllers. This thesis develops a comprehensive methodology for the performance evaluation of multiple-backend database systems. It also applies this methodology to develop a test-database set and test-transaction mix for the evaluation of the multi-backend database system, MBDS. Author (GRA)

Ada (TRADE NAME) PORTABILITY GUIDELINES Final Report
F. Pappas Mar. 1985 74 p
(Contract F33600-84-D-0280)
(AD-A160390; Rept-3285-2-208/1; ESD-TR-85-141) Avail: NTIS HC A04/MF A01 CSCL 09/2

This report presents the results of a study in using Ada to write portable programs. These programs with little or no modification, can be used in different target environments than those for which they were originally written. Ordinarily, a different target environment means a different computer, although the difference may instead be in the target operating system or peripherals. Software portability is one of the main cost-saving benefits anticipates with the use of Ada. Support for portability was a major goal in the design of the Ada language. However, portability does not come automatically with the use of Ada; programs written without specific attention to portability will not in general be portable. This report presents guidelines to be followed in order to produce code that is portable. A major goal in undertaking this study was support for development of a highly-portable Ada implementation of the JINTACCS Automated Message Preparation System (JAMPS). However, the guidelines are equally applicable to any program requiring portability. The guidelines are designed to permit an office conducting an acquisition to supply them to contractors as direction or guidance. They may also be useful in evaluating the portability of an existing implementation. GRA

CONTROLLING PRODUCTION FIRING: THE FCL LANGUAGE
L. Friedman Sep. 1985 18 p
(Contract MDA903-81-C-0335)
(AD-A160423; ISI/RS-85-159) Avail: NTIS HC A02/MF A01 CSCL 09/2

While implementing a diagnostic expert system, FAITH, a new language, FCL (Faith Control Language), was developed for

controlling the firing of productions. FCL greatly simplifies the task of the user to direct this firing in a coherent and purposeful way without sacrificing some of the main advantages enjoyed by production systems. One of the interesting features of the language is the use of declarative forms to direct the firing of proper production sequences in a diagnostic expert system. Declarative forms which represent circuit diagrams and problem families control goal-directed processes like tracing through circuits and searching for symptoms to confirm or deny closely related problems. Because we have the FCL facility at our disposal, we have been able to incorporate a larger than usual number of diagnostic strategies in FAITH, with the assurance that they will be employed under the right circumstances. MAXIMUM BOUNDED ENTROPY: APPLICATION TO TOMOGRAPHIC RECONSTRUCTION Final Technical Report
B. R. Frieden and C. K. Zoltani Apr. 1985 36 p
(DA Proj. 1L1-61102-AH-43)
(AD-A160429; BRL-TR-2650) Avail: NTIS HC A03/MF A01 CSCL 14/5

We have investigated a new image restoring algorithm which utilizes maximum bounded entropy (MBE). It incorporates prior knowledge of both a lower and upper bound of the signal in the unknown object. Its outputs are maximum probable estimates of the object, under the following conditions: (1) the photons forming the image behave as classical particles; (2) the object is assumed to be biased toward a flat, gray scene in the absence of image data; (3) the object is modeled as consisting of high-gradient foreground details riding on top of a smoothly varying background that must be estimated in a separate step; and (4) the image noise is Poisson. The proposed MBE estimator algorithm maximizes the sum of entropies of occupied photon sites. The result is an estimate of the object that is restricted to values inside the prescribed bounds. The algorithm was applied to the reconstruction of rod cross sections from tomographic viewing. In such a problem, the object consists only of upper-and lower-bound values, We found that in the example only four projections were needed to provide a good reconstruction, and that 20 projections allowed the partial resolution of a single pixel-wide crack in one of the rods. GRA

GUIDELINES FOR A MINIMAL Ada RUNTIME ENVIRONMENT Final Report
V. Grover Jan. 1985 67 p
(Contract F33600-84-D-0280)
(AD-A160451; Rept-3285-2-208/5; ESD-TR-85-139) Avail: NTIS HC A04/MF A01 CSCL 09/2

The study is intended to define the characteristics of an Ada Runtime Environment that effectively supports the development of real-time applications. The study was undertaken with the specific objective of supporting the selection of a runtime environment for the JINTACCS Automated Message Preparation System (JAMPS) program, but provides results useful in any real-time system acquisition program. A major goal of the JAMPS Ada software acquisition is to develop highly portable and reusable implementation that can be used in many different military systems. This goal impacts the selection and use of the runtime environment, as dependence on particular features of the runtime environment (either for functionality or performance) limits portability to only those systems providing the same features. This results in the concept of a minimal set of runtime environment features necessary to support JAMPS. Implementing JAMPS with dependence only on these features will allow portability within the class of systems providing those features. This report identifies such a minimal set of environment features. GRA

ROUTINES
P. E. Agre May 1985 30 p
(Contracts N00014-77-C-0389; N00014-80-C-0505)
(AD-A160481; AI-M-828) Avail: NTIS HC A03/MF A01 CSCL 05/11

Regularities in the world give rise to regularities in the way in which we deal with the world. That is to say, we fall into routines. THe author has been studying the phenomena of routinization, the process by which institutionalized patterns of interaction with the world arise and evolve in everyday life. Underlying this evolution is a dialectical process of internalization: First you build a model of some previously unarticulated emergent aspect of an existing routine. Armed with an incrementally more global view of the interaction, you can often formulate an incrementally better informed plan of attack. A routine is not a plan in the sense of the classical planning literature, except in the theoretical limit of this process. The author is implementing this theory using running arguments, a technique for writing rule-based programs for intelligent agents. Because a running argument is compiled into TMS networks as it proceeds, incremental changes in the world require only incremental recomputation of the reasoning about what actions to take next. The system supports a style of programming, dialectical argumentation, that has many important properties that recommend it as a substrate for large AI systems. One of these might be called additivity: an agent can modify its reasoning in a class of situations by adducing arguments as to why its previous arguments were incorrect in those cases. GRA

FAST FOURIER TRANSFORM (FFT) SUBROUTINE FOR DETERMINING FREQUENCY RESPONSE DATA FOR DIGITAL SIMULATIONS
L. Beach Jan. 1985 25 p
(AD-A160546; AD-E950763; AMSMI/RG-85-15-TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

A FFT (Fast Fourier Transform) computer subroutine using VAX-11 FORTRAN has been written to perform the FFT. The FFT algorithm used to write the FFT subroutine is an in-place, decimation in frequency, Radix-2 algorithm originally proposed by Gentlemen and Sande. The subroutine can be linked with a system simulation to provide the frequency spectrum impulse data as a part of the system simulation. The FFT subroutine is a very useful, fast computational algorithm which can be used with any digital system simulation when frequency spectrum processing is needed in the calculation of the system's frequency response. This report outlines the development and checkout of the FFT and computer subroutine. Author (GRA)

A SURVEY OF PUBLIC DOMAIN SOFTWARE FOR MICROCOMPUTERS Final Report
B. L. Harvey Aug. 1985 59 p
(AD-A160603; DTNSRDC/CMLD-85-12) Avail: NTIS HC A04/MF A01 CSCL 09/2

This document was written to help microcomputer users become aware of the types and the vast amount of public-domain software currently available. It does not include all the software available and inclusion is not meant to be a certification of merit. All software included in this document, however, has been tested by Users Services. Many useful microcomputer programs are available through the public domain. These programs are distributed to users free of charge. Some authors, however, do solicit donations for their programs. Many of the public-domain programs parallel or surpass commercially marketed software. It is sometimes difficult for the user to distinguish between a software package that will suit his or her needs or one that will never be used. This is true of both commercial products and public-domain products. The use of public-domain software can eliminate some of the expense of purchasing programs that may not be suitable for your needs. GRA

A GARBAGE COLLECTOR FOR A LARGE DISTRIBUTED ADDRESS SPACE
S. R. Wiseman Jun. 1985 18 p
(AD-A160645; RSRE-85009; DRIC-BR-97054) Avail: NTIS HC A02/MF A01 CSCL 09/2

An on the fly garbage collector for a distributed block structured address space is described. The time taken to recover reasonable amounts of garbage is reduced by recursively structuring the distributed system. This makes is practical to consider a distributed computer system with a single address space. Author (GRA)

SCAN LINE DIFFERENCE COMPRESSION ALGORITHM SIMULATION STUDY Final Report
Aug. 1985 89 p
(Contract DCA100-83-C-0047)
(AD-A160846; NCS-TIB-85-6) Avail: NTIS HC A05/MF A01 CSCL 09/2

The purpose of this task was to investigate the efficiency and potential operational effectiveness of the Scan Line Difference Compression (SDLC) algorithm presented in Appendix A of the report. Delta Information Systems (DIS) performed a software simulation study of the SLDC algorithm. The software was run using selected CCITT binary standard images as input, and the results were compared with those of the MODREAD II compression algorithm run with the same input data. The MODREAD II algorithm was chosen for the comparison because it is the most effect compression technique currently available. GRA

SIMULATION AND EVALUATION OF THE AT AND T PROPOSED PATTERN RECOGNITION ALGORITHM FOR GROUP 4 FACSIMILE Final Report
D. Bodson 11 Jun. 1985 76 p
(Contract DCA100-83-C-0047)
(AD-A160864; NCS-TIB-85-4) Avail: NTIS HC A05/MF A01 CSCL 17/2

CCITT is actively working toward the standardization of Group 4 facsimile. One of the key elements of this CCITT recommendation shall be the compression algorithm for encoding the transmitted facsimile signal. A preliminary standard for this coding technique has been established consisting of and extension of the Group 3 Modified READ Code (MRC). Several investigators have studied a class of more advanced compression techniques which recognize recurring patterns (such as textual characters) and transmit a short ASCII-like code to represent such a symbol. The compression for this type of coding algorithm exceeds that for the basic Group 4 algorithm by a significant degree. Since these compression techniques normally require an error free environment, which is available in Group 4 Facsimile, AT&T has submitted a specific proposal (Appendix B) to the CCITT for the design of such a pattern recognition coding technique. The purpose of this effort was to simulate and evaluate the AT&T proposal. GRA

AUTOMATING SENSITIVITY ANALYSIS OF COMPUTER MODELS USING COMPUTER CALCULUS
E. M. Oblow and F. G. Pin 1985 17 p refs Presented at the 7th Annual DOE LLWMP Participants Information Meeting, Las Vegas, Nev., 10 Sep. 1985
(Contract DE-AC05-84OR-21400)
(DE85-018095; CONF-8509121-6) Avail: NTIS HC A02/MF A01

An automated procedure for performing sensitivity analyses has been developed. The procedure uses a new FORTRAN compiler with computer calculus capabilities to generate the derivatives needed to set up sensitivity equations. The new compiler is called GRESS - Gradient Enhanced Software System. Application of the automated procedure with direct and adjoint sensitivity theory for the analysis of non-linear, iterative systems of equations is discussed. Calculational efficiency consideration and techniques for adjoint sensitivity analysis are emphasized. The new approach is found to preserve the traditional advantages of adjoint theory while removing the tedious human effort previously needed to apply this theoretical methodology. Conclusions are drawn about the applicability of the automated procedure in numerical analysis and large-scale modelling sensitivity studies. DOE

DEBUGGING IN A PARALLEL ENVIRONMENT
H. J. Wasserman and J. H. Griffin 1985 8 p refs Presented at the IEEE Conference on Software Maintenance, Washington, D.C., 11 Nov. 1985
(Contract W-7405-eng-36)
(DE85-010775; LA-UR-85-1142; CONF-851141-1) Avail: NTIS HC A02/MF A01

This paper describes the preliminary results of a project investigating approaches to dynamic debugging in parallel processing systems. Debugging programs in a multiprocessing environment is particularly difficult because of potential errors in synchronization of tasks, data dependencies, sharing of data among tasks, and irreproducibility of specific machine instruction sequences from one job to the next. The basic methodology involved in predicate-based debuggers is given as well as other desirable features of dynamic parallel debugging. DOE

FACTORS AFFECTING MANUFACTURING COSTS OF COMPLEX SYSTEMS, AND THE ROLE OF NEW TECHNOLOGIES IN REDUCING THESE COSTS
J. R. Gabriel Apr. 1985 14 p
(Contract W-31-109-eng-38)
(DE85-018557; ANL/MCS-TM-52) Avail: NTIS HC A02/MF A01

A mathematical measure of complexity is defined for a

manufactured object. It is shown that although a nuclear power station and a medium-sized computer are about equally complex, one costs 10,000 times more than the other. This report considers some especially troublesome problems in the nuclear industry that might account for part of this difference. Ways are suggested to use new technologies, particularly automated reasoning tools, to solve such problems. DOE

ANL USER'S GUIDE TO ACCESSING THE ENERGY RESEARCH CRAY X-MP COMPUTER
P. J. Bertoncini, M. A. Gallo, and A. R. Hinds Aug. 1985 59 p
(Contract W-31-109-eng-38)
(DE85-018558; ANL/TM-430) Avail: NTIS HC A04/MF A01

The ANL User's Guide to Accessing the Energy Research Cray X-MP Computer is for ANL researchers who have authorization to use the Energy Research Cray X-MP computer at the National Magnetic Fusion Energy Computer Center (NMFECC) at Lawrence Livermore National Laboratory. It primarily addresses the alternatives presently available at Argonne for accessing the Energy Research Cray X-MP computer at NMFECC and indicates any corresponding prerequisites. The Guide complements and draws information from documents distributed by NMFECC, especially EZACCESS (October 24, 1984) and National Magnetic Fusion Energy Computer Center Summaries of Utility Routines Available on the CRAY Computers (MFECC-020006). The Computing Services Document Distribution Counter does not stock these NMFECC documents because NMFECC policy is to change these online documents so frequently that printed copies quickly become obsolete. CONCEPTUAL DESIGN OF A DATA BASE FOR NUMERICAL SIMULATOR
Takayuki Aki 1985 23 p refs In JAPANESE; ENGLISH summary
(NAL-TR-869; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

Construction of a numerical simulator is one of the recent significant projects at the National Aerospace Laboratory of Japan. The numerical simulator is a large computer system which is composed of a supercomputer, large capacity files, and other device control systems including TSS terminals. One of the most important features of the numerical simulator is its ability to control a data base. This data base contains a large amount of wind tunnel data, results of numerical simulations, geometric information from test models, and so on. The design procedure for such a large and complicated data base is displayed. From this display, the total information about the data base for the numerical simulator can be clarified. Author

THE HEWLETT-PACKARD HP-41CV HAND-HELD COMPUTER AS A MEDIUM FOR TEACHING MATHEMATICS TO FIRE CONTROL SYSTEMS REPAIRERS Final Report, Jan. - Jun. 1984

J. A. Boldovici and T. D. Scott Oct. 1984 71 p

(AD-A160440; ARI-RR-1408) Avail: NTIS HC A04/MF A01 CSCL 09/2

A comparison was conducted between the performance of two groups of 30 fire control systems repairers after completing the mathematics part of the 45G10 course. The evaluation was designed by one of the cooperating military agencies, and the authors analyzed the resulting data. One group of repair personnel used the Hewlett-Packard HP-41CV hand-held computer in training. The other group recieved conventional training, without computers. The difference between the two groups' performance on an end-of-training mastery test was not statistically significant. Flaws in the evaluation design prevented determining whether the findings of no difference between the groups' performance was due to the kinds of training (computer and conventional) or to: (1) Differences between entry-level mastery of course material by the two groups. (2) Different amounts of training by the two groups. (3) An end-of-course test which was not difficult to reveal proficiency differences between the two groups. Several recommendations were made for designing and conducting future evaluations. The main recommendations were that: (1) Test scores for untrained persons be obtained, against which the scores of trained people can be compared. (2)Records be kept of the amounts of practice by each member of the compared groups. (3) End-of-course tests be difficult enough to reveal differences between good and mediocre performances. An experimental design was presented for future use which uses a no-training control-group, separates the effects of amount and kind of training, and is likely to detect proficiency differences. GRA

ACCESS TO INTER-ORGANIZATION COMPUTER NETWORKS Ph.D. Thesis

D. L. Estrin Aug. 1985 263 p

(Contract N00014-83-K-0125)

(AD-A160855; MIT/LCS/TR-345) Avail: NTIS HC A12/MF A01 CSCL 05/1

Much has been written about the automation of factory and office functions. An important aspect of this automation is the ability to communicate and share resources among different physical machines, different administrative and production functions, and different geographic sites. When two or more distinct organizations interconnect their internal computer networks they form an Inter-Organizational Network (ION). IONs support the exchange of computer aided design/computed aided manufacturing data between manufacturers and subcontractors, software distribution from vendors to users, customer input to suppliers' order-entry systems, and the shared use of expensive computational resources by research laboratories, as examples. This thesis analyzes the organization implications of using computer networks for inter-organization communication, and the technical implications of interconnecting networks across organization boundaries. This thesis demonstrates the value of the bimodal approach to system design and analysis in which the author asks both how industry and organization contexts shape a new technology, as well as how a new technology affects the organization and industry contexts in which it is applied. THE DESIGN AND IMPLEMENTATION OF AN OPERATING SYSTEM FOR THE IBM PERSONAL COMPUTER M.S. Thesis

A. J. Deese, Jr. Dec. 1984 62 p

(AD-A160875; AFIT/CI/NR-85-145T) Avail: NTIS HC A04/MF A01 CSCL 09/2

This thesis documents the design and implementation of an operating system, designated PCOS, developed in order to provide a pedagogical aid which could be used to provide students with a better understanding of operating system principles. PCOS (Personal Computer Operating System) is intended to be a simple yet functional operating system which students can analyze, modify, and extend. PCOS was designed and implemented on an IBM Personal Computer. However, the strategy used to structure PCOS along with the algorithms used to implement PCOS are applicable to most contemporary computer systems. This thesis presents the requirements and design criteria which were used to guide the design of PCOS. The decisions made during the design of PCOS are discussed. The algorithms and data structures used to implement PCOS are discussed. Further development of PCOS is also discussed. Author (GRA)

DISTRIBUTED ARCHITECTURE AND FAST PARALLEL ALGORITHMS IN REAL-TIME ROBOT CONTROL Ph.D. Thesis
Eli Eliyahu Binder 1985 224 p
Avail: Univ. Microfilms Order No. DA8518586

Control algorithms for accurate and fast moving robots require the use of the complete dynamic model of the robot. The complete dynamic model takes into account the nonlinearity and coupling terms of the whole structure. The time of computing the dynamic equations determines whether they are usable in practical applications. Reducing the computation time can be achieved by simplifying the dynamic model, simplifying the calculations, and improving the computer's computation speed. The proposed solution is a distributed computer architecture, and new fast parallel algorithms which allow efficient utilization of the computers. This architecture has several advantages: modularity, reliability, spatial distribution, and speed. Because of the serial nature of the dynamic calculations, it is difficult to achieve efficient utilizations of the multiple computers. With the new algorithms, motion, and force values, which must be passed between the computers, are replaced by predicted values. The predicted information is acquired from values calculated in previous sample intervals. This allows efficient use of the computers and increases the computation speed of the control algorithms. Dissert. Abstr.

AUTOMATIC PROCESSING OF NAVY MESSAGE NARRATIVE Interim Report
E. Marsh, J. Froscher, R. Grishman, H. Hamburger, and J. Bachenko 21 Aug. 1985 23 p
(F21-241)
(AD-A159670; NRL-8893) Avail: NTIS HC A02/MF A01 CSCL 09/4

An experimental system that employs techniques of computational linguistics and artificial intelligence to extract information from Navy messages is described. The long-term goal of this work is to develop capabilities that will enable systems to handle a broad spectrum of messages, from highly formatted messages with little English description to messages consisting entirely of English narrative. In this report, an experimental system that takes the first step towards automated understanding of Navy messages is constructed and implemented. The system extracts informational content from reports about shipboard equipment failure and uses the content to assign a distribution list to each message and to generate a summary of the equipment failure. The system can be extended to other Navy message types and used for other military applications. This approach, called information formatting, uses an explicit grammar of English and a classification of the semantic relationships within the domain to derive a tabular representation of the information in a message narrative. Prototype knowledge bases for distribution and summarization are implemented in OPS5 and use the information format to automatically construct a distribution list and summary. A comparison of computer-generated summaries with those obtained manually show good agreement, indicating that it is possible to automatically process message narrative and generate appropriate, and ultimately useful, summaries. COMBINING DECISION ANALYSIS AND ARTIFICIAL INTELLIGENCE TECHNIQUES. AN INTELLIGENT AID FOR ESTIMATING ENEMY COURSES OF ACTION Final Report, Jan. 1984 - Mar. 1985
P. E. Lehner, J. R. McIntyre, L. Adelman, K. Gates, and P. Luster Aug. 1985 60 p
(Contract MDA903-83-C-0311; DA Proj. 2Q1-62717-A-790)
(AD-A159846; ARI-RN-85-87) Avail: NTIS HC A04/MF A01 CSCL 15/7

AI/ENCOA is a prototype decision aid designed to assist Army tactical intelligence analysts in evaluating alternative Enemy Courses of Action. AI/ENCOA combines the use of additive Multi-attribute Utility (MAU) models for course of action evaluation with rule-based procedures for assigning parameter values (scores and weights) to the MAU model. AI/ENCOA is composed of two parts: a generic software package that implements a combined AI/MAU architecture, and two COA rule bases for evaluating different types of possible enemy COAs. The present final report summarizes the technical progress made in developing AI/ENCOA. GRA

METHODS OF CONCEPTUAL CLUSTERING AND THEIR RELATION TO NUMERICAL TAXONOMY Interim Report, Jan. - Jun. 1985
D. Fisher and P. Langley 22 Jul. 1985 39 p
(Contract N00014-84-K-0345)
(AD-A160221; UCI-ICS-85-26; UCI-ICS-TR-3) Avail: NTIS HC A03/MF A01 CSCL 12/1

Artificial Intelligence (AI) methods for machine learning can be viewed as forms of exploratory data analysis, even though they differ markedly from the statistical methods generally connoted by the term. The distinction between methods of machine learning and statistical data analysis is primarily due to differences in the way techniques of each type represent data and structure within data. That is, methods of machine learning are strongly biased toward (symbolic as opposed to numeric) data representations. We explore this difference within a limited context, devoting the bulk of our paper to the explication of conceptual clustering, and extension to the statistically based methods of numerical taxonomy. In conceptual clustering the formation of object clusters is dependent on the quality of higher-level characterizations, termed concepts, of the clusters. The form of concepts used by existing conceptual clustering systems (sets of necessary and sufficient conditions) is described in some detail. This is followed by descriptions of several conceptual clustering techniques, along with sample output. We conclude with a discussion of how alternative concept representations might enhance the effectiveness of future conceptual clustering systems. GRA

ARTIFICIAL INTELLIGENCE IN MAINTENANCE: SYNTHESIS OF TECHNICAL ISSUES Interim Report, Jan. 1984 - Jan. 1985
J. J. Richardson, R. A. Keller, R. A. Maxion, P. G. Polson, and K. A. DeJong Oct. 1985 85 p
(Contract F33615-82-C-0013)
(AD-A160863; AFHRL-TR-85-7) Avail: NTIS HC A05/MF A01 CSCL 05/1

The principal subdisciplines of AI (e.g., expert systems, problem solving, planning, and natural language understanding) are

presented as well as the larger systems engineering issues. In a chapter devoted to automated systems for managing hardware failures, the components of the failure cycle (detection, diagnosis, and repair) are described in tandem with machine approaches and applicable AI methodology. In this report, effective improvement in military maintenance is viewed to be dependent not only on automated systems but also on the development of human resources and the organizational context of maintenance. Evidence and information are provided to support the recommendation that it is possible to build more effective and less costly automated diagnostic systems only if these systems exploit human problem-solving capabilities. Four hypothetical examples of advanced systems and a comparison of human vs. machine strengths and weaknesses as problem solvers are outlined. Five research and development recommendations for the use of AI in maintenance conclude that: (1) there is a good match between the need for improved maintenance and the emerging science of AI, (2) AI research should be guided by a policy of integrated diagnostics, (3) field evaluations of AI applications should focus on organizational impact as well as technical issues, (4) programs should be targeted at both fielded systems and systems under development, and (5) basic research should investigate cooperative human-machine device diagnosis problem solving and the coordination of the specification- and symptom-based approaches. BOUNDS ON INTERACTION IN MULTIVARIABLE SYSTEMS AND A DESIGN METHOD FOR LOW INTERACTION Ph.D. Thesis Abstract Only
Matthew P. Ford Nov. 1984 3 p
Avail: Issuing Activity

Closed-loop time-domain interaction is a major concern in multivariable systems. Various methods exist for determining stability and designing the response of the diagonal outputs but little has been published about the determining factors of closed-loop interaction. A relationship between time domain and frequency domain interaction which takes into account output scaling and duration is defined. From his the desirable shape of frequency domain interaction is deduced. Two sets of theorems are then presented which relate open-loop plant properties to closed-loop frequency domain interaction. One set covers the Nyquist Array methods of design while the other covers the Characteristic Locus based methods. Author

A CASCADED CODING SCHEME FOR ERROR CONTROL
Lin Shu and Tadao Kasami (Osaka Univ., Japan) 10 Dec. 1985 58 p refs
(Grant NAG5-407)
(NASA-CR-176513; NAS 1.26:176513) Avail: NTIS
HC A04/MF A01 CSCL 12A

A cascade coding scheme for error control is investigated. The scheme employs a combination of hard and soft decisions in decoding. Error performance is analyzed. If the inner and outer codes are chosen properly, extremely high reliability can be attained even for a high channel bit-error-rate. Some example schemes are evaluated. They seem to be quite suitable for satellite down-link error control. Author

THE NUMERICAL VISCOSITY OF ENTROPY STABLE SCHEMES FOR SYSTEMS OF CONSERVATION LAWS Final Report
Eitan Tadmor (Tel-Aviv Univ., Israel) Nov. 1985 31 p refs
(Contract NAS1-17070; Grants NSF DMS-85-03294; DAAG29-85-K-0190)
(NASA-CR-178021; ICASE-85-51; NAS 1.26:178021) Avail: NTIS
HC A03/MF A01 CSCL 12A

Discrete approximations to hyperbolic systems of conservation laws are studied. The amount of numerical viscosity present in such schemes, is quantified and related to their entropy stability by means of comparison. To this end, conservative schemes which are also entropy conservative are constructed. These entropy conservative schemes enjoy second-order accuracy; moreover, they admit a particular interpretation within the finite-element frameworks, and hence can be formulated on various mesh configurations. It is then shown that conservative schemes are entropy stable if and only if they contain more viscosity than the mentioned above entropy conservative ones. M.G.

ACCURACY OF SCHEMES FOR THE EULER EQUATIONS WITH NON-UNIFORM MESHES Final Report
E. Turkel, S. Yaniv (IAI, Israel), and U. Landau (IAI, Israel) Dec. 1985 22 p refs Submitted for publication
(Contracts NAS1-17070; NAS1-18107)
(NASA-CR-178038; ICASE-85-59; NAS 1.26:178038) Avail: NTIS
HC A03/MF A01 CSCL 12A

The effect of non-uniform grids on the solution of the Euler equations is analyzed. A Runge-Kutta type scheme based on a finite volume formulation is considered. It is shown that for arbitrary grids the scheme can be inconsistent even though it is second-order accurate for uniform grids. An improvement is suggested which leads to at least first-order accuracy for general grids. Test cases are presented in both two- and three-space dimensions. Applications to finite difference and implicit algorithms are also given. M.G.

HC A02/MF A01 CSCL 12/1

The solution of linear systems having circulant coefficient matrices is considered in this paper. This kind of system occur in many applications: prediction, time series analysis, spline approximation, difference solution of partial differential equations, etc. The methods presented here are more efficient than the Toeplitz type methods and are based on the fast Fourier transform as well as the circulant factorization of the banded circulant matrices.

A LOCAL REFINEMENT FINITE ELEMENT METHOD FOR TIME DEPENDENT PARTIAL DIFFERENTIAL EQUATIONS Final Technical Report

J. E. Flaherty and P. K. Moore Aug. 1985 24 p Presented at the 2nd Army Conference, Applied Mathematics and Computing, Troy, N.Y., 22-25 May 1984

(AD-A159885; AD-E440300; ARLCB-TR-85028) Avail: NTIS

HC A02/MF A01 CSCL 12/1

We discuss an adaptive local refinement finite element method for solving initial-boundary value problems for vector systems of partial differential equations in one space dimension and time. The method uses piecewise bilinear rectangular space-time finite elements. For each time step, grids are automatically added to regions where the local discretization error is estimated as being larger than a prescribed tolerance. We discuss several aspects of our algorithm, including the tree structure that is used to represent the finite element solution and grids, an error estimation technique, and initial and boundary conditions at coarse-fine mesh interfaces. We also present computational results for a simple linear hyperbolic problem, a problem involving Burgers' equation, and a model combustion problem. GRA

ON THE MAXIMUM-WEIGHT CLIQUE PROBLEM

E. Balas, V. Chvatal, and J. Nesetril Jun. 1985 30 p

(Contract N00014-82-K-0329; Grant NSF ECS-82-05425)

(AD-A159953; MSRR-518; WP-7-85-86) Avail: NTIS

HC A03/MF A01 CSCL 12/1

The authors introduce several new classes of graphs on which the maximum-weight clique problem is solvable in polynomial time. Their common feature, and the central idea of their algorithms, is that every clique of these graphs is contained in some member of a polynomial-sized collection of induced subgraphs that are complements of bipartite graphs. Their approach is quite general, and might conceivably yield many other classes of graphs along with corresponding polynomial time algorithms.

HC A02/MF A01 CSCL 12/1

Two classes of finite and infinite moving average sequences of bivarite random vectors are considered. The first class has bivariate exponential marginals while the second class has bivariate geometric marginals. The theory of positive dependence is used to show that in various cases the two classes consist of associated random variables. Association is then applied to establish moment inequalities and to obtain approximations to some joint probabilities of the related bivariate point processes. GRA

(AD-A160204; AFOSR-85-0826TR) Avail: NTIS

HC A04/MF A01 CSCL 12/1

This document discusses an adaptive mesh moving technique that can be used with a finite difference or finite element scheme to solve initial-boundary value problems for vector systems of partial differential equations in two space dimensions. The mesh moving technique is based on an algebraic node movement function determined from the geometry and propagations of regions having significant discretization error indicators. This procedure is designed to be flexible, so that it can be used with many existing finite difference and finite element methods. To test the mesh moving algorithm, it was implemented in a system code with and initial mesh generator and a MacCormack finite difference scheme on quadrilateral cells for hyperbolic vector systems of conservation laws. Results are presented for several computational examples. The moving mesh scheme reduces dispersive errors near shocks and wave fronts and thereby reduces the grid requirements necessary to compute accurate solutions while incereasing computational efficiency. HC A02/MF A01 CSCL 12/1

In the theory of large random matrices, now to dominate the norm of a random matrix is a very important problem. This paper considers a different type of random matrices, namely -W to the k power, i.e., a power of a square random matrix with iid entries. The first result in this paper is the limit as n approaches infinity of the absolute value of (W/sq rt. n) to the k power is < or = (1+k)(sigma to the k power) where n is the size of W and here sigma-sq. is the variance of the entries of W. We assume only the existence of the 4-th moment of the entries of W. From this result it is easy to show that the spectral radius of W sq rt n is not greater then -sigma with probability 1. This result is known only for iid N(O,-sigma-sq) case. In proving the above result, a new kind of graphs has to be discussed carefully, and the truncation method used in Yin-Bai-Krishnaiah is also important here. GRA

Suppose a measure mu dominated a measure eta in the ordering induced by the excessive functions of a transient Markov process. Rost shows that eta can be represented as the distribution of the process stopped at a randomized optional time and started with initial distribution mu. This paper introduces the shift operator to the class of randomized optional times, inducing the class of randomized quasi-terminal times and that of randomized terminal times. It analyzes the algebraic properties of these classes and obtain some compactness results for the class of randomized quasi-terminal times. Some applications, including remplissage by hitting times are presented. Author (GRA)

ON STRUCTURE DETERMINATION FOR POLYNOMIAL INPUT-OUTPUT DIFFERENTIAL SYSTEMS
A. E. Pearson 13 Mar. 1985 10 p
(Grant AF-AFOSR-0230-82)
(AD-A160225; AFOSR-85-0781TR) Avail: NTIS
HC A02/MF A01 CSCL 12/1

The problem of structure determination for a deterministic class of polynomial input-output differential systems is formulated as a minimum norm-discrete time optimal control problem. The order of the differential equation and the degrees of the polynomials involving the input-output variables play the role of multiple discrete-times while the coefficient parameters play the role of a discrete control variable. The basis of the parameter identification techniques is Shinbrot's method of moment functionals using linear combinations of commensurable sinusoids as the modulating functions. Given the system input-output data on a finite time interval, the underlying computations involve calculating a finite set of Fourier series coefficients or moments formed from the data, which can be efficiently carried out via and FFT algorithm, followed by a sequence of singularity tests performed on a controllability type Gram determinant that arises for the formulation. NEW MEASURES OF DIVERSITY
M. Ahmad Jun. 1985 25 p
(Contract F49620-85-C-0008)
(AD-A160273; TR-85-23; AFOSR-85-0748TR) Avail: NTIS
HC A02/MF A01 CSCL 12/1

The problem of measuring diversity within populations and dissimilarity or similarity between populations has been extensively treated in the literature. Diversity within populations and dissimilarity between populations have been measured and interpreted differently. The choice of a diversity measure essentially depends on the context of a problem, however any diversity measure satisfying certain basic conditions can be used for partioning the total variability into a number of additive components, each of which can be used to test a certain null hypothesis or estimate a component of the variability. Rao outlined a general procedure called Analysis of Diversity which is similar to the Analysis of Variance for quantitative data. In this direction Light and Margolin Anderson and Landis have studied the Gini-Simpson index of diversity while Nayak has extended their results for Quadratic Entropy introduced by Rao. This paper proposes three new measures of diversity and study related inference problems. GRA

COMPUTATION OF SPHERICAL HARMONICS AND APPROXIMATION BY SPHERICAL HARMONIC EXPANSIONS
W. Freeden Feb. 1985 139 p
(Contract F19628-82-K-0017)
(AD-A160445; OSU/DGSS-362; AFGL-TR-85-0063; SR-7) Avail: NTIS HC A07/MF A01 CSCL 12/1

A technique is developed for generating spherical harmonics by exact computation (in integer mode) thereby circumventing any source of rounding errors. Essential results of the theory of spherical harmonics are recapitulated by intrinsic properties of the space of homogeneous harmonic polynomials. Exact computation of (maximal) linearly independent and orthonormal systems of spherical harmonics is explained using exclusively integer operations. The numerical efficiency is discussed. The development of exterior gravitational potential in a series of outer (spherical) harmonics is investigated. Some numerical examples are given for solving exterior Dirichlet's boundary-value problems by use of outer (spherical) harmonic expansions for not-necessarily spherical boundaries. GRA

COMPUTING VISIBLE-SURFACE REPRESENTATIONS
D. Terzopoulos Mar. 1985 64 p
(Contract N00014-75-C-0643)
(AD-A160602; AI-M-800) Avail: NTIS HC A04/MF A01 CSCL 12/1

The computational framework offered in this paper addresses, in a unified way, certain visual information processing tasks involved in the representation of visible surfaces. Particular emphasis is placed on utilizing highly parallel, cooperative processing to integrate surface shape information over multiple visual sources, to fuse it across a multiplicity of spatial resolutions, and to maintain the global consistency of the resulting distributed shape representations. The issues are first investigated in terms of a surface reconstruction model rooted in mathematical physics. This formal analysis is augmented by an empirical study of the resulting algorithms, which feature multiresolution iterative processing within hierarchical surface shape representations. The approach is guided by current knowledge of how humans perceive visible surfaces, while applications in machine vision provide a testbed for the algorithms. GRA

THE BAYESIAN APPROACH TO RECURSIVE STATE ESTIMATION: IMPLEMENTATION AND APPLICATION Ph.D. Thesis
S. C. Kramer 1985 130 p
(AD-A160838; AFIT/CI/NR-85-139D) Avail: NTIS HC A07/MF A01 CSCL 12/1

In Bayesian estimation, the objective is to calculate the complete density function for an unknown quantity conditioned on noisy observations of that quantity. This work considers recursive estimation of a nonlinear discrete-time system state using successive observations. The formal recursion for the density function is easily written, but generally there is no closed form solution. The numerical solution proposed here is obtained by modifying the recursion and using a simple piece-wise constant approximation to the density functions. The critical part of the algorithm then becomes a discrete linear convolution that can be realized using FFT's. GRA

VECTORIZATION OF DIFFUSION COMPUTATIONS IN THE PRESENCE OF PERIODIC BOUNDARY CONDITIONS
I. K. Abu-Shumays May 1985 23 p Presented at the Westinghouse Engineering Computer Applications Symposium, Monroeville, Pa., 7 Oct. 1985
(Contract DE-AC11-76PN-00014)
(DE85-017631; WAPD-T-2865; CONF-8510149-2) Avail: NTIS HC A02/MF A01

Solutions of very large three-dimensional elliptic diffusion problems are very expensive in terms of storage requirements and computational cost even on today's supercomputers. Effective utilization of translational or rotational periodic boundary conditions, when applicable, can substantially reduce cost. Implementation of periodic boundary conditions however is not straightforward and special care should be exercised to avoid loss of computational efficiency. Application of periodic boundary conditions perturbs the overall matrix structure of the underlying discretized diffusion equations and may adversely affect standard computational methods. For simplicity, this study is restricted to the solution of two-dimensional diffusion problems. The numerical solution methods considered are the point Chebyshev and line cyclic Chebyshev iterative methods. It is straightforward to implement periodic boundary conditions within the framework of the highly vectorizable point Chebyshev iterative method. This paper presents alternative approaches for implementing periodic boundary conditions within the framework of the line cyclic Chebyshev iteration method. In the process, the method of odd-even cyclic reduction as applied to vectorization of the solution of tridiagonal systems is generalized to apply to special sparse predominantly tridiagonal matrix equations. For two-dimensional problems, it is demonstrated numerically on a CYBER 205 for model situations that the resulting line cyclic Chebyshev iterative method is computationally superior to the highly vectorizable point Chebyshev iterative method. The superiority of the line cyclic Chebyshev method over the point Chebyshev method is expected to hold for more complex problems with general mesh triangulations. DOE

A STOCHASTIC MODEL FOR PARTICLE IMPINGEMENTS ON ORBITING SPACECRAFT
Leonard W. Howell, Jr. Jan. 1986 43 p refs
(NASA-TP-2550; NAS 1.60:2550) Avail: NTIS HC A03/MF A01 CSCL 12A

A general methodology for simulating particle impingements on orbiting spacecraft is developed. Major steps in the modeling process are presented as (1) modeling objective, (2) construction of the spacecraft geometrical model, (3) simulation of the particles in the space environment, (4) particle impact and subsequent events of interest, and (5) results of the simulation. A simulation of the expected meteoroid impingements on the Hubble Space Telescope and the resulting angular momentum transfers which can cause telescope pointing disturbances is given to illustrate these methods. THE SURE RELIABILITY ANALYSIS PROGRAM
Ricky W. Butler Feb. 1986 44 p refs
(NASA-TM-87593; L-16005; NAS 1.15:87593) Avail: NTIS HC A03/MF A01 CSCL 14D

The SURE program is a new reliability analysis tool for ultrareliable computer system architectures. The program is based on computational methods recently developed for the NASA Langley Research Center. These methods provide an efficient means for computing accurate upper and lower bounds for the death state probabilities of a large class of semi-Markov models. Once a semi-Markov model is described using a simple input language, the SURE program automatically computes the upper and lower bounds on the probability of system failure. A parameter of the model can be specified as a variable over a range of values directing the SURE program to perform a sensitivity analysis automatically. This feature, along with the speed of the program, makes it especially useful as a design tool. Author

AN EQUATION FOR ONE-SIDED TOLERANCE LIMITS FOR NORMAL DISTRIBUTIONS
C. L. Link Aug. 1985 4 p
(AD-A159831; FSRP-FPL-458) Avail: NTIS HC A02/MF A01 CSCL 12/1

An equation that does not require tables is given to determine a one-sided tolerance limit for the 100 Pth percentile of a normal distribution with confidence 1-gamma for any sample size n. This equation gives accuracy to approximately three or more significant digits when compared to tabled values. Thus it is possible to develop an automated procedure for determining tolerance limits that is not restricted to tabled values. Author (GRA)

BOUNDS ON DISTRIBUTIONS ARISING IN ORDER RESTRICTED INFERENCE: THE PARTIALLY ORDERED CASE Interim Report
F. T. Wright Sep. 1985 30 p

(Contract N00014-80-C-0322)
(AD-A159872) Avail: NTIS HC A03/MF A01 CSCL 12/1

In testing hypotheses involving order restrictions on a collection of parameters, distributions arise which are mixtures of chi-squared or beta distributions. In general, the mixing coefficients are quite intractable even for a moderate number of populations. Stochastic upper and lower bounds are obtained for mixtures which arise in Bartholomew's tests for homogeneity of normal means with the alternative restricted by a quasi ordering. These bounds are applicable in the dual-testing situation, that is in testing the order restriction as a null hypothesis; in testing order restrictions in exponential families, Poisson intensities and multinomial parameters; and in some nonparametric settings. These can also be applied to obtain the least favorable configuration for testing equality of two multinomial populations with a stochastic ordering alternative. Author (GRA)

ESTIMATION OF POPULATION PROPORTION AND OF PROBABILITIES OF MISCLASSIFICATION FROM IMPERFECT BINOMIAL DATA BY COMPARISON WITH RESULTS OF A STANDARD METHOD OF KNOWN IMPERFECTION Technical Report, Sep. 1984 - Sep. 1985

N. L. Johnson and S. Kotz Aug. 1985 13 p Prepared in cooperation with North Carolina Univ., Chapel Hill
(Contract N00014-84-K-0301)
(AD-A159926; UM/MSS/85/7) Avail: NTIS HC A02/MF A01 CSCL 12/1

Observations from inspection by a test method and a standard method are combined to provide estimators of population proportion, and of probabilities of misclassification for the test method. Results of Hochberg and Tenenbein (1983) and of Albers and Veldman (1984) are extended to the case where the standard method is not perfect, but its misclassification probabilities have known values. Both moment and maximum likelihood estimators are considered and some asymptotic properties of the resulting estimators are compared. Author (GRA)

A METHODOLOGY FOR COMPUTATION REDUCTION FOR SPECIALLY STRUCTURED LARGE SCALE MARKOV DECISION PROBLEMS

F. Y. Ding, T. J. Hodgson, and R. E. King Jan. 1985 28 p
(Contract N00014-84-K-0046)
(AD-A159950; NCSU-IE-TR-85-3) Avail: NTIS HC A03/MF A01 CSCL 12/1

Markov Decision Processes deal with sequential decision making in stochastic systems. Existing solution techniques provide powerful tools for determining the optimal policy set in such systems, however, many practical problems have extremely large state and action spaces making them computationally intractable. Typically, the state variable definition is n-dimensional and the number of states expands at a rate proportional to the power of n. For such large problems, the need for large amounts of random access memory and computation time restricts the ability to obtain solutions. The purpose of this paper is to both present a methodology which facilitates the solution of large scale problems, and provide computational results indicating the value of the approach. STATISTICAL ASPECTS OF RELIABILITY, MAINTAINABILITY AND AVAILABILITY Annual Report, 1 Oct. 1984 - 30 Sep. 1985

M. Hollander and F. Proschan Oct. 1985 12 p
(Contract F49620-85-C-0007)
(AD-A160126; AFOSR-85-0794TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

During this period, a total of 11 research papers were issued, five papers were published in scientific journals or volumes, and 12 papers are in press of accepted for publication. The research performed under this contract developed theory, concepts, and methods in reliability, availability, and maintainability in a variety of topic areas. Some of the topic areas treated include: optimum assembly of systems; multistate system theory; testing whether a new item is stochastically longer-lived than an item of specified age; nonparametric estimation of a discrete survival function when observations are censored, yielding a smoother estimate than the standard Kaplan-Meir method estimate; measuring the effect of increased censorship on an estimate of a life distribution; a generalization of total positivity; characterization of discrete IFR distributions based on coincidences among order statistics; extension of Schur functions and majorization to the continuous case; testing whether new is better than used of a specified age with randomly censored data; further multivariate probability inequalities using Schur functions and increasing in arrangement functions; simultaneous estimation of coherent system survival function and component survival functions using censored data; development of maintenance models in which maintenance actions are subject to random error; and development of new Markov stochastic processes corresponding to notions of IFR, IFRA, etc. GRA

CHARACTERIZATION OF DISCRETE PROBABILITY DISTRIBUTIONS BY PARTIAL INDEPENDENCE

A. A. Alzaid, C. R. Rao, and D. N. Shanbhag May 1985 19 p
(Contract F49620-85-C-0008)
(AD-A160130; TR-85-16; AFOSR-85-0860TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

If X and Y are random variables such that P (X > Y) = 1 and the conditional distribution of Y given X is binomial, then Moran (1952) showed that Y and (X-Y) are independent if X is Poisson. This document extends Moran's result to a more general type of conditional distribution of Y given X, using only partial independence of Y and X-Y. This provides a generalization of a recent results of Janardhan and Rao (1982) on the characterization of generalized Polya-Eggenberger distribution. A variant of Moran's theorem is proven which generalizes the results of Patil and Seshadri (1964) on the characterization of the distribution of a random variable x based on some conditions on the conditional distribution of Y given X and the independence of Y and X-Y. CONSTRUCTION OF EXPONENTIAL MARTINGALES FOR COUNTING PROCESSES Technical Report, 15 May 1984 - 14 May 1985

W. A. Rosenkrantz 3 Apr. 1985 13 p
(Grant AF-AFOSR-0167-82)
(AD-A160189; AFOSR-85-0868TR; TR-10) Avail: NTIS HC A02/MF A01 CSCL 12/1

Let N(t) be a counting process with continuous compensator A(t) and f(t) a bounded predictabler process. If E(exp(2/f/N(t))) < infinity and E(exp (2(1 + exp/f/)A (t)) < infinity then it is shown that z(+) = exp (-integral from 0 to t (f(u)dN(u)) - integral from 0

$\int_0^t$ (exp (-f(u)) - 1)dA(u) is a martingale. This is a partial extension of a theorem of Kabanov, Liptser, Shiryaev (1980) who assumed A(t) < or = but did not assume A(t) is continuous. GRA

THE LIMITING DISTRIBUTION OF LEAST SQUARES IN AN ERRORS-IN-VARIABLES LINEAR REGRESSION MODEL Technical Report, Sep. 1984 - Aug. 1985
L. J. Gleser, R. J. Carroll, and P. P. Gallo Apr. 1985 28 p
(Contract F49620-82-C-0009)
(AD-A160190; MMS-1577; AFOSR-85-0869TR) Avail: NTIS
HC A03/MF A01 CSCL 12/1

There is a substantial literature concerning linear regression when some of the predictors (independent variables) are measured with error. Such models are of importance in econometrics (instrumental variables models), psychometrics (correction for attenuation, models of change), and in instrumental calibration studies in medicine and industry. Recent theoretical work concerning maximum likelihood estimation in such models appears in Healy (1980), Fuller (1980), and Anderson (1984), while Reilly and Patino-Leal (1981) take a Bayesian approach. In an applied context, an investigator may either overlook the measurement errors in the predictors, or choose the classical ordinary least squares (OLS) estimator of the parameters because of its familiarity and ease of use. Certainly, the methodology of classical least squares theory (confidence intervals, multiple comparisons, tests of hypotheses, residual analysis) is considerably more developed than the corresponding errors-in-variables methodology, particularly in samples of moderate size. In this paper, it is shown that under reasonable regularity conditions such linear combinations are (jointly) asymptotically normally distributed. GRA

INFERENCE FOR STATIONARY RANDOM FIELDS GIVEN POISSON SAMPLES
A. F. Karr Jan. 1985 12 p
(Grant AF-AFOSR-0029-82)
(AD-A160191; TR-422; AFOSR-85-0812TR) Avail: NTIS
HC A02/MF A01 CSCL 12/1

This paper examines some questions of statistical inference -- specifically, estimation of the mean and covariance function, as well as linear state estimation -- for stationary random fields observable only at the points of a (likewise) Poisson process. Given a d-dimensional random field and a Poisson process independent of it, suppose that it is possible to observe only the location of each point of the Poisson process and the value of the random field at that (randomly located) point. Nonparametric estimators of the mean and covariance function of the random field - based on observation over compact sets of single realizations of the Poisson samples are constructed. Under fairly mild conditions these estimators are consistent (in various senses) as the set of observation becomes unbounded in a suitable manner. The state estimation problem of minimum mean squares reconstruction of unobserved values of the random field is also examined. GRA

THE AMOUNT OF NOISE INHERENT IN BANDWIDTH SELECTION FOR A KERNEL DENSITY ESTIMATOR Technical Report, Sep. 1984 - Aug. 1985
P. Hall and J. S. Marron May 1985 31 p
(Contract F49620-82-C-0009)
(AD-A160235; TR-100; AFOSR-85-0631TR) Avail: NTIS
HC A03/MF A01 CSCL 12/1

Any practical method of constructing a bandwidth must depend only on a statistical sample, and should produce some sort of estimate of this bandwidth. The purpose of this paper is to show that there a well-defined limits to the accuracy of all data-driven bandwidth estimates. Put another way, there is an unbridgeable gap between the minimum integrated square error attained using a optimal bandwidth and the minimum achievable integrated square error using a data-driven bandwidth estimate. PRINCIPAL COMPONENT ANALYSIS UNDER CORRELATED MULTIVARIATE REGRESSION EQUATIONS MODEL
P. R. Krishnaiah and S. Sarkar Apr. 1985 30 p
(Contracts F49620-85-C-0008; F49620-82-K-0001)
(AD-A160266; TR-85-09; AFOSR-85-0855TR) Avail: NTIS
HC A03/MF A01 CSCL 12/1

The motivation behind the study in this paper is to derive some asymptotic results useful in the area of principal component analysis under the CMRE model. The object of the principal component analysis is to select a small number of important linear combinations of the variables which will best describe the variation among experimental units. In this paper, the authors consider the problem of testing for the equality of the last few eigenvalues of the covariance matrix under correlated multivariate regression equations models. Asymptotic distributions of various test statistics are derived when the underlying distribution is multivariate normal. Some of the distribution theory is extended to the case when the underlying distribution is elliptically symmetric. GRA

MODIFIED NONPARAMETRIC KERNEL ESTIMATES OF A REGRESSION FUNCTION AND THEIR CONSISTENCIES WITH RATES
R. S. Singh and M. Ahmad Apr. 1985 28 p
(Contract F49620-85-C-0008)
(AD-A160267; TR-85-12; AFOSR-85-0857TR) Avail: NTIS
HC A03/MF A01 CSCL 12/1

The theory of regression is concerned with the prediction of the value of a variable, called the response or dependent variable, at a given value of another (correlated) variable, called the predictor or independent variable. Prediction is needed in several practical situations. For example, an agriculturist wants to know the yield of wheat at an amount of a specified fertilizer, a meteorologist wants to forecast weather several hours ahead on the basis of previous atmospheric measurements and a physician is interested in determining the weight of a patient in terms of the number of weeks he or she has been on a diet. In this document, two sets of modified kernel estimates of a regression function are proposed: one when a bound on the regression function is known and the other when nothing of this sort is at hand. Explicit bounds on the mean square errors of the estimators are obtained. Pointwise as well as uniform consistency in mean square and consistency in probability of the estimators are proved. Speed of convergence in each case is investigated. GRA

COVARIATE MEASUREMENT ERROR IN LOGISTIC REGRESSION Technical Report, Sep. 1984 - Aug. 1985
L. A. Stefanski and R. J. Carroll Apr. 1985 27 p Prepared in cooperation with Cornell Univ., Ithaca, N.Y.

(Contract F49620-82-C-0009; Grant AF-AFOSR-0080-80)
(AD-A160277; AFOSR-85-0867TR) Avail: NTIS
HC A03/MF A01 CSCL 12/1

In a logistic regression model when covariates are subject to measurement error the naive estimator, obtained by regressing on the observed covariates, is asymptotically biased. This document introduces a bias-adjusted estimator and two estimators appropriate for normally distributed measurement errors; a functional maximum likelihood estimator and an estimator which exploits the consequences of sufficiency. The four proposals are studied asymptotically under conditions which are appropriate when the measurement error is small. A small Monte-Carlo study illustrates the superiority of the measurement-error estimators in certain situations. GRA

SPADE (SERIES PARALLEL DIRECTED ACYCLIC GRAPH EVALUATOR): A TOOL FOR PERFORMANCE AND RELIABILITY EVALUATION, REVISION
R. A. Sahner and K. S. Trivedi Jul. 1985 30 p
(Grant AF-AFOSR-0132-84)
(AD-A160289; CS-1984-15; AFOSR-85-0745TR) Avail: NTIS
HC A03/MF A01 CSCL 09/2

A model for the stochastic analysis of directed acyclic graphs is developed. These graphs represent event-precedence networks where the distribution function associated with an event is assumed to be a variant of the phase-type distribution. Events may occur sequentially, probabilistically, or concurrently. The distribution function of the graph execution time is computed in a semi-symbolic form. Applications of the model for the evaluation of concurrent program execution time and to the reliability analysis of fault-tolerant systems are discussed. GRA

ASSESSING SYSTEM RELIABILITY USING CENSORING METHODOLOGY
H. Doss, S. Freitag, and F. Proschan 12 Sep. 1985 19 p
(Contract N00014-76-C-0475)
(AD-A160616; SU-TR-364) Avail: NTIS HC A02/MF A01 CSCL 12/1

This document describes a problem which is of practical and theoretical importance in reliability. Under study is a coherent structure consisting of n independent components. The structure is observed continuously until it fails. For components failing before or at system failure time, we observe complete lifelengths; for components still functioning at system failure time we observe censored lifelengths. For the system we observe system lifelength. From a sample of m such structures we wish to estimate the system lifelength distribution. As far as we know, this problem has not been solved or even treated in the literature. In this paper we propose an estimator of the system lifelength distribution. as a by-product, we also obtain estimates of the mean and quantiles of the system lifelength and of all the corresponding quantities for component lifelengths. In Section 2 we give several asymptotic results concerning the estimators. In Section 3 we present and discuss two boot-strap schemes that are used in small samples to assess the variability of our estimates and to construct confidence intervals. GRA

MAXIMUM ENTROPY POLE-ZERO ESTIMATION
B. R. Musicus and A. M. Kabel Aug. 1985 96 p
(Contract N00014-81-K-0742; Grant NSF ECS-80-07102)
(AD-A160655; TR-510) Avail: NTIS HC A05/MF A01 CSCL 12/1

Maximum Entropy has been suggested by numerous authors as a good objective measure for optimally modeling the power spectrum of a wide-sense stationary random process. This documents describes a new Maximum Entropy pole-zero spectrum estimation method. The mathematical model is designed to achieve the maximum possible entropy subject to constraints on the first few correlation and cepstral values. The solution, which is in the form of an ARMA model, is based on solving a generalized, symmetric, almost-Toeplitz eigenvalue problem. The authors characterize the existence, uniqueness, stability and minimum phase properties of the solution, and categorize all possible occurrences of canceling pole-zero pairs. A search procedure based on a fast Levinson-like algorithm is given for estimating the model, and examples are presented to illustrate its performance. A special case of the method gives a model estimate similar to that of Pisarenko's harmonic retrieval problem. GRA

GENERALIZED RANK ANNIHILATION FACTOR ANALYSIS Interim Technical Report
E. Sanchez and B. R. Kowalski 15 Oct. 1985 19 p
(Contract N00014-75-C-0536)
(AD-A160651; TR-34) Avail: NTIS HC A02/MF A01 CSCL 12/1

The method of rank annihilation is shown to be a particular case of a more general method for quantitation in bilinear data arrays such as LC/UV, GC/MS or emission-excitation fluorescence. Generalized rank annihilation is introduced as a calibration method that allows for simultaneous quantitative determination of all the analytes of interest in a mixture of unknowns. Only one calibration mixture is required. The bilinear spectra of both unknown and calibration sample must be obtained. Bilinear target factor analysis is introduced as a projection of a target bilinear matrix onto another principal component bilinear matrix space. GRA

A PARAMETERIZED PROCEDURE FOR DETERMINING REAL HEIGHT FROM IONOGRAMS BY USE OF GENERALIZED PARABOLIC PROFILES Physical Sciences Research Papers
M. M. Klein 8 May 1985 26 p
(AF Proj. 2310)
(AD-A160383; AFGL-TR-85-0101; AFGL-PSRP-669) Avail: NTIS HC A03/MF A01 CSCL 12/1

In previous reports an analytic procedure was developed for determining real heights from ionograms by directly solving the integral relation between real height and virtual height. The real height could then be obtained by a direct integration of the virtual height over the range of frequencies encountered. In a later report the method was applied to typical ionograms; the required integration being performed numerically. In addition, a simplified procedure was developed in which and ionogram could be fitted to a parametric series of polynomials and the integration required for determination of real height performed analytically. This report generalizes this procedure by modeling electron density provides in terms of a parameterized series of generalized parabolic profiles. The profiles are then converted to virtual height or ionogram form. The real height corresponding to a given ionogram is obtained by comparison of the ionogram with the parameterized profiles. Since the real height for a given paramterized profile is related in a very simple way to its virtual height, the integration process required for the previous polynominal method is hereby avoided. In additions, since the parabolic profile has a vertical slope at the maximum electron density, it provides a better fit to ionospheric data than a polynomial. GRA

RADIATIVE LIFETIMES AND KINETIC STUDIES OF METASTABLE NO(+)(a 3 SIGMA(+)) AND O2(+)(a 4 pi SUB u)
A. OKeefe and J. R. McDonald 1985 38 p
(AD-A159759) Avail: NTIS HC A03/MF A01 CSCL 20/8

The lowest energy metastable electronic states of the nitric oxide and molecular oxygen cations have been studied using Fourier Transform mass Spectrometry. Using very low neutral reactant pressures and ion trapping periods of up to several seconds, the radiative relaxation rate of the metastable ion becomes competitive with its reaction rate. In this fashion both kinetic information and the radiative lifetime of the metastable state are obtained. The measured rate constants for the reactions of NO+(a3sigma+) with CO2 (k = 1.0 + or - 0.2 x 2 to the -10 cc/sec) and of 02+(a 4 piu) with Ar (k = 4.9 + or - 1.5 x 10 to the -10 cc/sec) are in agreement with earlier results. The measured lifetimes of the NO+ metastable (sigma = 1.45 sec) and the O2+ metastable (sigma = 0.22 sec) are discussed using a four state spin-orbit coupling model which predicts metastable radiative lifetimes which agree reasonably well with the experimental values. MICROBENDING FIBER OPTIC ACOUSTIC SENSOR Patent
N. Lagakos and W. J. Trott, inventors (to Navy) Issued 16 Jul. 1985 15 p Supersedes AD-D009899
(AD-D011938; US-Patent-4,530,078; US-Patent-Appl-SN-387633; US-Patent-Class-367-149) Avail: US Patent and Trademark Office CSCL 17/1

A point hydrophone according to a first preferred embodiment of the present invention includes two opposed pistons which are subjected to an acoustic pressure wave. In response to the pressure wave, the opposed pistons push a pair of deformer plates against an optical fiber to deform the fiber thereby intensely modulating an optical signal passing through the fiber. An extended hydrophone according to a second preferred embodiment of the present invention includes an optical fiber wound in a helical groove formed in a cylindrical surface. A plurality of parallel axial slots are located in a spaced-apart relationship to each other at positions about the cylindrical surface and are oriented in parallel with the axis of the cylindrical surface. Each axial slot intersects with the helical

groove at a plurality of locations and has a depth greater than the depth of the groove. An applied acoustic pressure wave forces the fiber into the axial slots thus deforming the fiber and thereby intensely modulating an optical signal passing through the fiber in response to the acoustic pressure. Depth equalization means are included for each embodiment. Author (GRA)

LABORATORY EXPERIMENTS ON ACTIVE SUPPRESSION OF ADVANCED TURBOPROP NOISE
James H. Dittmar Dec. 1985 18 p refs
(NASA-TM-87129; E-2740; NAS 1.15:87129) Avail: NTIS HC A02/MF A01 CSCL 20A

The noise generated by supersonic tip speed propellers may be a cabin environment problem for future propeller-driven airplanes. Active suppression from speakers inside the airplane cabin has been proposed for canceling out this noise. The potential of active suppression of advanced turboprop noise was tested by using speakers in a rectangular duct. Experiments were first performed with sine wave signals. The results compared well with the ideal cancellation curve of noise as a function of phase angle. Recorded noise signals from subsonic and supersonic tip speed propellers were than used in the duct to deterthe potential for canceling their noise. The subsonic propeller data showed significant cancellations but less than those obtained with the sine wave. The blade-passing-tone cancellation curve for the supersonic propeller was very similar to the subsonic curve, indicating that it is potentially just as easy to cancel supersonic as subsonic propeller blade-passing-tone noise. Propeller duct data from a recorded propeller source and spatial data taken on a propeller-drive airplane showed generally good agreement when compared versus phase angle. This agreement, combined with the similarity of the subsonic and supersonic duct propeller data, indicates that the area of cancellation for advanced supersonic propellers will be similar to that measured on the airplane. Since the area of cancellation on the airplane was small, a method for improving the active noise suppression by using outside speakers is discussed. Author

DESIGN AND TESTING OF HARDWARE IMPROVEMENTS OF AN ACOUSTIC SOUNDER M.S. Thesis
W. L. Richards Jun. 1985 52 p
(AD-A159672) Avail: NTIS HC A04/MF A01 CSCL 20/1

The application of lasers in military communications and weapons systems accentuate the need for instruments capable of measuring the fine dynamic structure of the atmosphere. One of the most useful tools available for the probing of the atmosphere is the acoustic sounder. Commercial grade acoustic sounders, such as the Aeroviroment model number 300 cannot collect atmospheric data with the quality needed for laser propagation research. The usable range of the Aerovironment model 300 acoustic sounder is less than 500 meters. Many laser systems need atmospheric information at altitudes of 1 to 2 kilometers and higher. The objective of this thesis was to upgrade an existing acoustic sounder to increase the range and improve the quality of the receiver-processor. A serious deficiency of the Aerovironment model number 300 is the poor coupling of the acoustic transducer to the feedhorn. This thesis involved a complete redesign and experimental test of the transducer feedhorn using two different horn styles as well as making the horn removable and easily changeable. GRA

FLIGHT OPERATIONS NOISE TESTS OF EIGHT HELICOPTERS
S. A. Yoshikami Aug. 1985 697 p
(AD-A159835; FAA/EE-85-7) Avail: NTIS HC A99/MF A02 CSCL 01/3

This document presents acoustical data and flight path information acquired during the FAA/HAI Helicopter Flight Operations Noise Test Program. As-measured noise levels of the Aerospatiale 365N, Agusta 109A, Bell 206L-1 and 222A, Hughes 500D, MBB BK117, Robinson R22, and Sikorsky S76 are presented for various enroute and heliport flight operations. These operations include level flyovers at two altitudes, normal takeoffs, normal and constant-glideslope approaches, various types of noise abatement approaches, level flight turns and hover (IGE and OGE). The acoustical data are accompanied by radar tracking data and cockpit instrument panel information which document the operational procedures flown, and meteorological measurements to permit data corrections for nonstandard atmospheric conditions. This helicopter operational noise data base can be used in enroute and heliport land use planning, heliport environmental studies and planning guidelines, pilot familiarization and training, verification of noise prediction and estimating methods, and lateral attenuation studies. A recent investigation has shown that the spectrum of the resonance frequencies of plates can be obtained by ultrasonic pulse techniques. By physically analyzing the distortion of the reflected wave trains, a method was developed through which the parameters of the plate resonances, and hence the physical constants of the plate material, can be determined by ultrasonic means. The physical origin of the plate resonances was elucidated, and it was shown how the observed rining of ultrasonic resonances is caused by multiple internal reflections in the plate. A series of backscattering experiments employing wavetrains with carrier frequency on or off a resonance was interpreted this way, with perfect agreement between theory and experiment. Author

DEFECTS AND MATERIALS CHARACTERIZATION BY ANALYSIS OF ULTRASONIC SIGNALS. STUDY OF A TECHNIQUE TO MEASURE ULTRASONIC ATTENUATION Final Report
C. Valdecantos and J. Miguel May 1985 68 p
(Grant AF-AFOSR-0340-83)
(AD-A159927; EOARD-TR-85-09(C)) Avail: NTIS HC A04/MF A01 CSCL 14/2

The objective of this work is to explore the actual possibilities of a Nondestructive testing (NDT) technique to be applied in laboratory conditions, as a first stage, in order to make measurements of mechanical and elastic parameters on metals. Classic test of measurement of acoustic velocity and attenuation is useful to compute Young modulus or Poisson ratio, but these parameters have no wide technological usefulness. Much more interesting are others parameters such as yield strength, tensile strength, or fracture toughness. This is of particular interest in view of the cost of destructive test to assess it. From the NDT techniques, ultrasonics seems, at a first look, a good way to intend. Ultrasonics is, first of all, a dynamic test because material is forced to transmit stress through the crystal structure. Present work describes some experiments carried out at INTA's Ultrasonic Laboratory in order to set up a technique able to take absolute attenuation measurements over a range of frequencies from 15 to 60 MHz, typically. AN EXPERIMENTAL INVESTIGATION OF ACOUSTIC PROPAGATION IN SATURATED SANDS WITH VARIABLE FLUID PROPERTIES
R. D. Costley, Jr. May 1985 106 p
(Contract N00014-80-C-0490)
(AD-A159930; ARL-TR-85-14) Avail: NTIS HC A06/MF A01 CSCL 20/1

The Biot-Stoll theory describes the propagation of acoustic waves in a saturated, unconsolidated porous medium. The expressions for the attenuation and phase velocity derived from

this theory depend explicitly on the viscosity, density, and bulk modulus of the pore fluid. An experiment has been designed to determine the dependence of attenuation and phase velocity on these properties of the pore fluid. The phase velocity and attenuation of compressional waves were measured using a mixture of water and glycerine as the interstitial fluid. The theoretical background is reviewed and the experimental procedure is discussed in detail. The results, along with comparisons with the Biot-Stoll theory, are then presented. The choices of the theoretical parameters are discussed and their relation to the fit of the theory to the data. The Biot-Stoll theory is shown to adequately describe the effects of the fluid properties on acoustic wave propagation in saturated sediments, at least for compressional waves of the first type. GRA

SOUND TRANSMISSION INTO SHELLS DOUBLY EXCITED BY INCIDENT WAVES AND BY ARBITRARY SURFACE FORCING FUNCTIONS Final Report, for FY84
G. C. Gaunaurd and J. Barlow 15 Jan. 1985 115 p
(AD-A159936; NSWC/TR-85-42) Avail: NTIS HC A06/MF A01 CSCL 20/1.

We develop the fundamental exact analytical and computational model required to study the transmission of incident plane sound waves into submerged elastic cylindrical shells subjected to arbitrary loads on their outer surface. We use the superposition principle in this linear problem to separate the contributions to the internally transmitted field caused by the incident wave from that of the surface load. This basic model uses the exact (2-D) formulation of elastodynamics to describe the shell motions, and that of general linear acoustics to describe the wave motion in the inner and outer fluids. We display the isobaric contours of the internally transmitted pressure fields, exhibiting their caustics and their progressive development as the frequency is increased within the band $0<k3a<10$. The contour plots are generated for all the possible combinations of loading and insonification conditions with a view toward computing an advantage ration which measures the gains that would result from sensing the internally transmitted field, rather than the field external to the shell. This advantage ratio is shown always to be greater than unity and; in many cases, much greater than unity. We performed a detailed computational study to quantitatively determine the effect of shell thickness, stiffness, and general material composition, on the sound fields transmitted into the loaded shells. This analysis makes the work valid for various metals and for shell relative-thickness between 1% and 20%, which is a range covering most practical cases. GRA

MULTIPLE BEAMFORMING
W. M. X. Zimmer 1 Jul. 1985 30 p
(AD-A159979; SACLANTCEN-SM-181) Avail: NTIS HC A03/MF A01 CSCL 20/1

Beamforming techniques are generally based on the assumption that the received signal arrives from a single source. In a realistic situation, however, there is more than one source present and these sources can interact with each other in the beamformer. This paper describes a method that allows us to form multiple beams in order to steer the receiver toward two or more sound sources simultaneously. The main advantage of this procedure is that it includes the full interactions of the different sources in the beamformer. It describes a multiple beamformer in which the interaction of different sources is included in the algorithm. The maximum likelihood principle is used to find the different source amplitude and bearing estimates. The performance of the algorithm is compared for varying conditions with the Cramer-Rao lower bound. Two pre-processors necessary and suitable to ensure globally optimized results are derived from the ideas of Pisarenko and Prony. Finally, a post-processor is proposed to evaluate the success of the multiple beamformer. GRA

A STUDY TO DETERMINE THE MERIT OF OCEAN BOREHOLE SYSTEMS FOR ACOUSTIC DETECTION Final Technical Report
F. Duennebier, C. McCreery, D. Harris, R. Cessaro, and C. Fisher 31 Jul. 1985 85 p
(Contract N00014-84-C-0464)
(AD-A160149) Avail: NTIS HC A05/MF A01 CSCL 17/1

Data obtained by an ocean borehole experiment at 44 deg N, 160 deg E was analyzed in order to evaluate the detection capability of a borehole seismic system as compared to an ocean bottom system. Absolute noise levels for the complete duration of the 64-day experiment were also determined, indicating the borehole site to be one of the quietest sites in the world. This report presents results of analysis of active and passive seismic signals and background noise recorded on an ocean subbottom (OSS-IV) and ocean bottom seismometers (OBS), for the purpose of determining their relative merits for acoustic detection. Results from OSS-IV noise and signal propagation studies document the increase in signal fidelity and signal-to-noise ratio obtained at this site. Attenuation analysis of short line data indicates that loss at OSS-IV is more than expected from spherical spreading, but the low noise level of the instrument makes it sensitive to sources in the ocean for long ranges. AN ANALYSIS OF STIMULUS DETERMINANTS OF TARGET DETECTION IN PBB (PASSIVE BROADBAND) DISPLAYS Interim Report
J. DiVita 1 Aug. 1985 33 p
(AD-A160203; NSMRL-1057) Avail: NTIS HC A03/MF A01 CSCL 17/1

Targets on passive broadband sonar displays may be detected on the basis of three distinct stimulus attributes--target contrast, target marking density, and grouping of similar brightnesses. Previous research has failed to isolate and systematically manipulate these variables. Methods of doing so are proposed in order to determine which of these stimulus attributes underlie target detection. Enhancing the proper variables should improve target detection. GRA

EFFECTS OF INFLOW CONDITIONS ON DISCRETE FREQUENCY NOISE GENERATED BY SMALL, AXIAL FLOW FANS
K. B. Washburn and G. C. Lauchle Sep. 1985 149 p
(AD-A160579; PSU/ARL/TR-85-001) Avail: NTIS HC A07/MF A01 CSCL 13/1

Discrete frequency acoustic radiation is generated by subsonic axial flow fans through both steady and unsteady blade loading. Steady loading is a function of pumping requirement, and unsteady loading is generated by spatially periodic inflow distortions. The latter effect is the dominant generation mechanism when small fans are used to cool electronic equipment. Fans mounted to exhaust out of a device ingest distortions created by all objects within the unit. This work represents an empirical survey of noise generated by small axial flow cooling fans in the presence of upstream obstructions and various inlet configurations. The obstructions include a cylinder, a thin rectangle, a thick rectangle, and an electronic card gate model. Each of these represents obstructions found in a typical installation. Simple and modified inlet baffles, finger guards, and honeycomb flow straighteners are investigated. Design recommendations are offered to minimize discrete tone generation. These include aerodynamic shaping of unaviodable obstructions, a minimum axial distance of 0.3 fan radii for obstructions in the inlet, the avoidance of blockage in lateral inflow and the use of an inlet baffle to smooth inlet distortions. Account is taken of the spatial restictions of typical installations. GRA

DISTRIBUTED SENSOR NETWORKS Semiannual Technical Summary Report, 1 Oct. 1984 - 31 Mar. 1985
R. T. Lacoss 26 Sep. 1985 32 p

(Contract F19628-85-C-0002; ARPA Order 3345; AF Proj. 5D30; AF Proj. 5T10)
(AD-A160596; ESD-TR-85237) Avail: NTIS HC A03/MF A01 CSCL 17/2

The Distributed Sensor Networks (DSN) program is aimed at developing and extending target surveillance and tracking technology in systems that employ multiple spatially distributed sensors and processing resources. Such a system would be made up of sensors, data bases, and processors distributed throughout an area and interconnected by an appropriate digital data communication system. The detection, tracking, and classification of low flying aircraft has been selected to develop and evaluate DSN concepts in the light of a specific system problem. A DSN test bed has been developed and is being used to test and demonstrate DSN techniques and technology. The overall concept calls for a mix of sensor types. The initial test-bed sensors are small arrays of microphones at each node augmented by TV sensors at some nodes. This Semiannual Technical Summary (SATS) reports results for the period 1 October 1984 through 31 March 1985. Progress in the development of distributed tracking algorithms and their implementation in the DSN test-bed system is reviewed in Section II. Test-bed versions of distributed acoustic tracking algorithms now have been implemented and tested using simulated acoustic data. This required developing a solution to a basic distributed tracking problem: the information feedback problem. Target tracks received by one node from another node often implicitly include information that originally was obtained from the receiving node.

ANALYSIS OF A DIGITAL TECHNIQUE FOR FREQUENCY TRANSPOSITION OF SPEECH M.S. Thesis
V. DiGirolamo Sep. 1985 100 p
(AD-A160832) Avail: NTIS HC A05/MF A01 CSCL 09/2

Frequency transposition is the process of raising or lowering the frequency content (pitch) of an audio signal. The hearing impaired community has the greatest interest in the applications of frequency transposing. Though several analog and digital frequency transposing hearing aid systems have been built and tested, this thesis investigates a possible digital processing alternative. Pole shifting, in the z-domain, of an autoregressive (all pole) model of speech was proven to be a viable theory for changing frequency content. Since linear predictive coding (LPC) techniques are used to code, analyze and synthesize speech, with the resulting LPC coefficients related to the coefficients of an equivalent autoregressive model, a linear relationship between LPC coefficients and frequency tranposition is explored. This theoretical relationship is first established using a pure sine wave and then is extended into processing speech. The resulting speech synthesis experiments failed to substantiate the conjectures of this thesis. However, future research avenues are suggested that may lead toward a viable approach to transpose speech.

GENERATION OF UNDERWATER SOUND BY A MOVING HIGH-POWER LASER SOURCE
Y. H. Berthelot 1 Aug. 1985 218 p
(Contract N00014-82-K-0425)
(AD-A160900; ARL-TR-85-21) Avail: NTIS HC A10/MF A01 CSCL 20/1

The generation of underwater sound by high-power laser pulse is analyzed both theoretically and experimentally. The mechanism of sound generation is the thermal expansion of the water caused by heat imparted by the laser. The basic physical properties of such a laser-induced thermoacoustic source are investigated with a time domain approach which is valid in the nearfield of the source. Results are then extended to the case of a thermoacoustic source moving at subsonic, transonic, or supersonic velocities on the surface of the water. Special attention is paid to the case of a source moving at a velocity close to the speed of the sound in the water, because, at such a velocity, high pressure transients can be generated, making the thermoacoustic mechanism of sound generation more attractive for practical applications. Experimental results were obtained with a laser system providing up to 5 joules of energy over a pulse duration of approximately 1 ms, during which the intensity was modulated at a single frequency between 5 and 80 kHz. The laser emitted either in the infrared region of the spectrum or in the visible region of the spectrum. Most of the experimental results presented in this study were obtained with the infrared Neodymium: Glass laser. Four kinds of results were obtained: pressure waveforms, directivity patterns, sound level dependence on source velocity, and spreading curves. In general, the experimental results are in good agreement with the theoretical predictions.

COMPARISON OF X-RAY COMPUTED TOMOGRAPHY, THROUGH-TRANSMISSION ULTRASOUND, AND LOW-kV X-RAY IMAGING FOR CHARACTERIZING GREEN-STATE CERAMICS
R. A. Roberts, W. A. Ellingson, and M. W. Vannier Jun. 1985 8 p refs Presented at the 15th Symposium on Nondestructive Evaluation, San Antonio, Tex., 23 Apr. 1985 Prepared in cooperation with Washington Univ., St. Louis, Mo.
(Contract W-31-109-eng-38)
(DE85-018370; CONF-8504119-2) Avail: NTIS HC A02/MF A01

Green-state $MgAl_2O_4$ compact disk specimens have been studied by X-ray computed tomography (CT), through-transmission pulsed ultrasound, and low-kV X-ray imaging to compare the abilities of these nondestructive evaluation (NDE) methods to detect flaws and density variations. X-ray computed tomographic images were obtained from a 125-kV (peak) imaging system with a 512 x 512 matrix and a pixel size of 100 (MU)m. A 3- to 10MHz focused-beam ultrasonic transducer was used, together with special immersion techniques, to obtain topographical maps of acoustic attenuation and phase velocity; a 30 x 30 matrix was used in the ultrasonic scans. A 35-kV X-ray system with high-

solution type RR film was used to obtain conventional radiographs. Large-scale nonuniform density gradients were detected with CT and ultrasonics in supposedly uniform ceramic disks. In addition, inclusions in the green-state samples were detected by all three methods, with each method providing certain advantages. The influence of grain structure and other ceramic powder characteristics will be examined in the future. DOE

ACOUSTIC DETECTION OF CAVITATION IN A PROTOTYPE CENTRIFUGAL PUMP
Y. S. Cha 1985 6 p Presented at the International Symposium on Propeller and Cavitation, Wuxi, Jiangsu, China, 1 Apr. 1985
(Contract W-31-109-eng-38)
(DE85-018447; CONF-8504180-1) Avail: NTIS HC A02/MF A01

This paper describes the results of acoustic detection, using a submerged hydrophone, of cavitation in a prototype centrifugal pump. The experimental results show that the high-frequency (> 10 kHz) noise provides a better means of detecting light and moderate pump cavitation conditions as compared with low-frequency cavitation noise that was not easily distinguished from the background noise. Another important observation was that cavitation noise started to increase sharply when the NPSH value was reduced to some critical value which seemed to coincide with the point where the head started to decrease for all the tests. Noise at higher frequency bands exhibited quite different behavior from that at low frequencies. For a high NPSH value, the high-frequency noise amplitude increased slightly as the NPSH value was decreased while the head remained constant. The high-frequency noise started to increase sharply as soon as the head began to decrease until somewhere near the 3% headdrop point. The noise level then decreased and increased again over a very narrow band of NPSH value. This phenomenon was observed in some other pump tests reported in the literature. A qualitative interpretation was provided to explain this behavior. DOE

STUDIES OF LASER-GENERATED ULTRASONIC WAVEFORMS AT DIFFERENT ORIENTATIONS
C. B. Scruby Apr. 1985 14 p
(AERE-R-11686) Avail: NTIS HC A02/MF A01

The ultrasonic waveforms generated by a pulsed laser incident on a steel plate are studied at an oblique orientation as a function of laser energy and compared with the results at the epicenter. There is a steady increase in compression wave amplitude with energy when passing from thermoelastic to ablation regimes, the waveform exhibiting a compressive pulse throughout, in a contrast to the epicenter where there is a large increase in amplitude and change of pulse shape. It is concluded that the thermoelastic and ablation sources are comparable in generation efficiency per unit laser energy, except close to the epicenter, and that the chief effect of raising the power density is to vary the angular distribution of ultrasonic energy. NUCLEAR SAFETY TECHNOLOGY AND PUBLIC ACCEPTANCE
F. Kienle 14 Nov. 1985 8 p ref Transl. into ENGLISH from Atom and Strom (West Germany), v. 29, no. 5, 1983 p 131-132
(BLL-CE-Trans-8123(9022.09)) Avail: British Library Lending Div., Boston Spa, Engl.

In the years 1976 to 1982 officialdom intensified the safety regulations in German nuclear power plants out of all proportion, without actually bringing about a recognizable plus in safety or indeed a greater acceptance by the public of the peaceful use of nuclear energy. Although the risk to employees of nuclear power plants and to the population living in their vicinity is substantially smaller than the dangers of modern civilization, the general public still regards with concern the consequences of radioactive exposure and the hazards to later generations from long-life radionuclides. The task for the coming years must be to maintain the safety standard now attained, while simultaneously reducing those exaggerated individual requirements in order to establish a balance in safety precautions. Additionally, a proposal put forward by Sir Walter Marshall, Chairman of the CEGB, should be pursued, i.e., to put the presumed risks of nuclear energy into their correct perspective in the public eye using comprehensible comparisons such as the risks from active or passive smoking. This cannot be accomplished by quoting abstract statistics. Author

ASSOCIATION/DISSOCIATION PROCESSES IN DENSE GASES
Annual Technical Report, 1 Jul. 1984 - 30 Jun. 1985
M. R. Flannery 16 Aug. 1985 81 p
(Grant AF-AFOSR-0233-84)
(AD-A160236; GIT-85-001; AFOSR-85-0793TR) Avail: NTIS HC A05/MF A01 CSCL 07/4

A new basic microscopic theory of association/dissociation processes in dense gases has been developed. Expressions for

the time-dependent rates R (subscript A, D)(t) for the association/dissociation of atomic or molecular species A and B in a gas M are formulated in terms of the net probability P sub i (superscript A, D) for association/dissociation of bound energy level i of the pair (A-B). A new Variational Principle for these rates is proposed and is applied to ion-ion recombination, as a benchmark, with very successful results. The diffusional theory is examined and it is shown that highly accurate results can be obtained for general mass systems provided the new basic expression introduced here for R (sub (A,D))(t) is adopted. The microscopic basis of the mascroscopic Debye-Smoluchowski Equation (DSE) is examined and analytical expressions for rates are derived for general interactions between A and B. A valuable relationship between the rates of recombination appropriate to the cases of ions generated with uniform frequency within a reaction volume and ions which approach each other from infinite separation is derived. PROCEEDINGS OF THE 40TH SYMPOSIUM ON MOLECULAR SPECTROSCOPY Final Report
I. N. Rao 21 Jun. 1985 169 p Proceedings held at Columbus, Ohio, 17-21 Jun. 1985
(Grant AF-AFOSR-0145-85)
(AD-A160415; AFOSR-85-0799TR) Avail: NTIS HC A08/MF A01 CSCL 07/4

Recent years have witnessed the development of powerful experimental techniques that have allowed the observation of finer details of molecular spectra with a resolution not conceived as possible even in the recent past. Therefore, in interpreting the laboratory data it has become necessary to re-examine the theory. Document provides abstracts of all 275 papers presented at the symposia. GRA

TRIPLY DIFFERENTIAL STUDIES OF ATOMIC AND MOLECULAR PHOTOIONIZATION USING SYNCHROTRON RADIATION Final Report, 1 Jun. 1980 - 30 Sep. 1985
A. C. Parr and J. L. Dehmer 17 Oct. 1985 17 p
(Contract N00014-85-F-0016; DA Proj. RR0-1103)
(AD-A160587) Avail: NTIS HC A02/MF A01 CSCL 07/4

Basic studies of photoionization processes in atoms and molecules have been carried out using triply differential (differential in incident wavelength, ejected electron energy, and ejection angle) photoelectron spectroscopy with synchrotron radiation as the excitation source. Measurements have been conducted in the vacuum ultraviolet wavelength range up to h(mu) approximately 35 eV on a variety of atomic and molecular systems. Photoelectron branching ratios (partial photoionization cross sections) and photoelectron angular distributions were obtained for all accessible states. Several novel physical effects were discovered including (1) shape-resonance-induced vibrational effects in molecular photoionization, (2) autoionization-induced-vibrational effects in molecular photoionization, (c) polarization of fluorescence following molecular photoionization, (4) photoelectron spectra of selected rare gas clusters, (5) continuum-continuum-coupling effects in photoionization of Nitrogen and Sulfur hexafluoride, etc. Triply differential photoionization data on a variety of atoms and molecules were produced. A second-generation, state-of-the-art triply differential photoelectron spectrometer was developed and put into operation. GRA

FORCES ON NEUTRAL ATOMS DUE TO ELECTROMAGNETIC FIELDS Annual Summary Report, 1 Sep. 1984 - 31 Aug. 1985
D. E. Pritchard 23 Oct. 1985 6 p
(Contract N00014-83-K-0695)
(AD-A160719) Avail: NTIS HC A02/MF A01 CSCL 07/4

Progress Report discusses design and construction of a new large bore (3 in.) atom slower and trap which will use cryogenics both to produce ultra-low vacuums and to enable use of superconducting magnet technology. The vacuum and cryogenic dewar is under construction, the longitudinal magnets have been built, and the trap magnet has been successfully tested. Considerable effort was also devoted to major renovations of our laboratory space including installation of a 18 in. hole to the newly acquired laboratory space below our laser lab this will permit use of a vertical configuration for the apparatus, which is roughly 5 meters long. EXPERIMENTAL STUDIES IN MOLECULAR FRAGMENTATION: PROCESSES, ENERGETICS AND DIAGNOSTICS Final Report, 1 Jan. 1983 - 31 Mar. 1985
J. L. Kohl Sep. 1985 60 p
(Contract N00014-83-K-0134)
(AD-A160745) Avail: NTIS HC A04/MF A01 CSCL 07/5

Developed is a new technique and apparatus for studying photodestruction processes in molecules. Proof of method experiments have been carried out using H2(+) as the prototypical molecule. A paper describing this work has been submitted to the Review of Scientific Instruments. Application of the method to polyatomics and more than two fragments per dissociation event has been investigated. Beams of the ions of nitromethane and its fragments have been produced in sufficient quantities fo experimentation using our technique. The absorption spectrum of nitromethane has been measured in the range 190 to 300 nm with 0.001 nm resolution. A feasibility study of induced fluorescence experiments to determine the spectra of polyatomic free radicals has been carried out. Experiments on the photodissociation of CH(+) and OH(+) and CH have been initiated. GRA

CHEMICAL APPLICATIONS OF TOPOLOGY AND GROUP THEORY. 19: THE EVEN PERMUTATIONS OF THE LIGANDS IN FIVE-COORDINATE COMPLEXES VIEWED AS PROPER ROTATIONS OF THE REGULAR ICOSAHEDRON
R. B. King and D. H. Rouvray 14 Oct. 1985 23 p
(Contract N00014-84-K-0365)
(AD-A160747; TR-5) Avail: NTIS HC A02/MF A01 CSCL 07/3

The 60 even permutations of the ligands in the five-coordinate complexes, ML5, form the alternating group A5, which is isomorphic with the icosahedral pure rotation group I. Using this idea, it is shown how a regular icosahedron can be used as a topological representation for isomerizations of the five-coordinate complexes, ML5, involving only even permutations if the five ligands L correspond either to the five nested octahedra with vertices located at the midpoints of the 30 edges of the icosahedron or to the five regular tetrahedra with vertices located at the midpoints of the 20 faces of the icosahedron. However, the 120 total permutations of the ligands in five-coordinate complexes ML5 cannot be analogously represented by operations in the full icosahedral point group Ih, since Ih is the direct product I x C2 whereas the symmetric group S5 is only the semi-direct product. In connection with previously used topological representations on isomerism in five coordinate complexes, it is noted that the automorphism groups of the Petersen graph and the Desargues-Levi graph are isomorphic to the symmetric group S5 and to the direct product S5 x S2, respectively. Applications to various fields of chemistry are briefly outlined. GRA

INTRAMOLECULAR COUPLING IN METAL-FREE BINUCLEAR PHTHALOCYANINES
E. S. Dodsworth, A. B. P. Lever, P. Seymour, and C. C. Leznoff May 1985 44 p
(Contract N00014-84-G-0201)
(AD-A160784; TR-3) Avail: NTIS HC A03/MF A01 CSCL 07/4

The electronic absorption and emission spectra of a series of mononuclear and binuclear metal-free phthalocyanine species are reported. The binuclear species are linked through a benzene ring by a bridge of 0,1,2,4 or 5 atoms. The spectroscopic data for the

nuclear species, are analysed in terms of exciton coupling between the two halves of the molecule. Intramolecular coupling seen to depend upon the nature of the bridging link. In some ses a cofacial conformation is possible; this gives rise to aracteristic long-lived emission near 750 nm. GRA

EASUREMENTS OF STABILITY LIMITS FOR A SPACE-HARGE-DOMINATED ION BEAM IN A LONG A.G. TRANSPORT HANNEL
L. G. Tiefenback and D. Keefe May 1985 6 p Presented at he Particle Accelerator Conference, Vancouver, British Columbia, 3 May 1985
Contract DE-AC03-76SF-00098)
DE85-016636; LBL-19647; CONF-850504-241) Avail: NTIS HC A02/MF A01

The Single Beam Transport Experiment at LBL consists of 32 electrostatic quadrupole lenses arranged in a FODO lattice. Five further lenses provide a matched beam from a high-current high-brightness cesium source for injection into the FODO channel. We call the transport conditions stable if both the emittance and current remain unchanged between the beginning and end of the channel, and unstable if either the emittance grows or the current decreases because of collective effects. We have explored the range of single-particle betatron phase advance per period from sigma0 = 45 to 150 deg to determine the stability limits for the space-charge depressed phase advance, sigma. No lower limit for sigma (down to 7(0)) has been found at sigma0 = 60(0), whereas limits have clearly been identified and mapped in the region of sigma0 above 90 deg. DOE

A SUPERCONDUCTING HEAVY ION INJECTOR LINAC
K. W. Shepard 1985 5 p Presented at the IEEE 1985 Particle Accelerator Conference, Vancouver, British Columbia, 13-16 May 1985
(Contract W03101980eng-38)
(DE85-013897; CONF-850504-176) Avail: NTIS HC A02/MF A01

A conceptual design for a low velocity .007 < v/c < .07 superconducting heavy-ion linac is reviewed. This type of linac may have significant cost and performance advantages over room-temperature linacs, at least for applications requiring modest beam currents. Some general features of the design of very-low velocity superconducting accelerating structures are discussed and a design for a 48.5 MHz, v/c < .0009 structure, together with the status of a niobium prototype, is discussed in detail. Preliminary results of a beam dynamics study indicate that the low velocity linac may be able to produce heavy-ion beams th time-energy spreads of a few KeV-nsec. DOE

THE LAST HURRAH FOR QUARKONIUM PHYSICS: THE TOP SYSTEM
E. Eichten Feb. 1985 42 p refs Presented at 1984 SLAC Summer School
(DE85-012304; FNAL/C-85/29-T; CONF-850768-1) Avail: NTIS HC A03/MF A01

This year marks the tenth anniversary of the discovery of the J/psi. During this time much experimental data and theoretical understanding has been accumulated for heavy quark systems. Heavy quark systems have a very clean spectroscopy which allows precision measurements of all the basic properties of the states (mass, spin, parity, and change conjugation, as well as transition and decay rates. In particular, the analysis of the observed spectrum of (C, anti c) and (B, anti b) resonances has provided important insight into the physics of heavy quark-antiquark (quarkonium) systems. In addition to these systems, the low-lying states with associated new flaor (i.e. one heavy quark and one light quark system) have been observed for the (C, anti u), (C, anti d), (C, anti s), (B, anti u), and (B, anti d) systems. ELECTRO-OPTICAL KERR EFFECT VOLTAGE MEASUREMENTS ON MULTI-MEGAVOLT PULSED POWER ACCELERATORS
G. R. Allen, H. P. Davis, B. T. Neyer, D. J. Muron, J. Chang, and R. E. Hebner 1985 4 p Presented at the SPIE International Technical Symposium on Optical and Electro-optical Engineers, San Diego, Calif., 18 Aug. 1985 Prepared in cooperation with National Bureau of Standards, Washington, D.C.
(Contract DE-AC04-76DP-00789)
(DE85-016580; SAND-85-0354C; CONF-850887-23) Avail: NTIS HC A02/MF A01

We have developed a highly accurate, non-perturbing, non-invasive voltage monitor for multi-megavolt measurements in water using the electro-optic Kerr effect. The strong electric field causes the normally isotropic water to become linearly birefringent, with the birefringence axis aligned along the field. A beam polarized at 45(0) with respect to the electric field will experience a phase difference in the parallel and perpendicular components by an amount proportional to the square of the electric field. Measuring the phase change gives an accurate and precise value of the electric field. DOE

FRACTAL BEHAVIOR OF SINGLE-PARTICLE TRAJECTORIES AND ISOSETS IN ISOTROPIC AND ANISOTROPIC FLUIDS
R. K. Kalia, P. Vashishta, and S. W. deLeeuw Aug. 1985 7 p Presented at the 9. International Workshop on Condensed Matter Theories, San Francisco, Calif., 5 Aug. 1985 Prepared in cooperation with Michigan State Univ., East Lansing
(Contract W-31-109-eng-38)
(DE85-018343; CONF-8508135-1) Avail: NTIS HC A02/MF A01

Molecular dynamics simulations for a variety of systems in 2 spatial dimensions reveal fractal behavior associated with trajectories and isosets of single particle motion. The fractal dimensions of trajectories and isosets are 2 and 0.5, respectively, irrespective of the nature of the interparticle interaction or thermodynamic state of the system. Recently, we have investigated the fractal behavior of diffusing Ag ions in the superionic phase of Ag2S. MD calculations have shown that the Ag ions diffuse anisotropically along certain directions in the lattice of S particles. Fractal dimensions D and anti D for Ag ions are again 2 and 0.5, respectively. These results confirm the universal nature of fractal dimensions of trails and isosets. DOE

DISTORTION OF He EMISSION LINES AFTER FAST-ION COLLISIONS
P. W. Arcuni 1985 8 p refs Presented at the Workshop on Autoionization of Atoms and Small Molecules, Argonne, Ill., 2 May 1985 Prepared in cooperation with Chicago Univ., Ill.
(Contract W-31-109-eng-38)
(DE85-018347; CONF-850560-6) Avail: NTIS HC A02/MF A01

After excitation by fast ions (velocity = 2 to 5 au) the emission

line profiles of doubly-excited helium atoms are observed to differ significantly from the normal shape of Beutler-Fano resonances. This difference is attributed to the Coulomb interaction between the emitted electron and the ion used to excite the atom. We explain the effect quantitatively with a simple classical model combined with a post-collision-interaction theory. DOE

SMALL ANGLE NEUTRON SCATTERING DATA ON CEMENTS WITH POZZOLANIC ADDITIVES
D. Pearson, A. J. Allen, and R. A. J. Sambell Mar. 1985 24 p
(AERE-R-11609) Avail: NTIS HC A02/MF A01

Small angle neutron scattering has been used to demonstrate that the reaction between reactive silicas and calcium hydroxide in ordinary portland cement (the so-called pozzolanic reaction) does produce additional material. This additional material is microstructurally similar to calcium silicate hydrate gel, the normal cementitious phase in hydrated cement. Increase in temperature is shown to increase the rate of production of gel ascribed to the pozzolanic reaction. In addition, the rate of compressive strength development at different curing temperatures is shown not to be directly related to the amount of gel which is produced. DOE

THE USE OF ELECTRON BEAM POSITION MODULATION IN AUGER DEPTH PROFILE ANALYSIS Technical Report
M. S. Leung and G. W. Stupian 1 Sep. 1985 24 p
(Contract F04701-83-C-0084)
(AD-A159712; TR-0084A(5945-02)-2; SD-TR-85-60) Avail: NTIS HC A02/MF A01 CSCL 14/2

By combining Auger analysis with ion etching, the scanning Auger microprobe (SAM) provides three-dimensional composition information not readily obtainable from other analytical methods. As this technique is being applied to the analysis of microelectronic devices with increasingly smaller dimensions, two major limitations become evident: (1) features of interest in microelectronic circuits are often comparable in size to the beam diameter of commercial Auger microprobes, and (2) the electron beam tends to drift on the specimen surface because of mechanical instability and differential thermal expansion. Because Auger Depth profiling requires relatively low sputter rates for good depth resolution, depth profiles of small features can be seriously degraded by beam drift. In this report, we describe a technique that will eliminate the error and uncertainty caused by beam instability. In our technique, the analyzing beam is scanned repetitively across the feature to be profiled, and the Auger signal is synchronously detected at the scan frequency. The resultant Auger signal magnitude is shown to be unaffected by beam drift when compared to conventional detection methods. Author (GRA)

AFWL-TR-84-126-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 18/9

This document reviews the design status of the SP-100, heat pipe space nuclear reactor system. It also identifies those systems and components requiring additional research to support continued SP-100 system development. The heat pipe reactor was designed to produce 100 KWe of continuous power in a space environment. The design constraints include an expected system operation time of 7 years and a maximum weight of approx. 3000 kg. The reactor, employing an unclad, highly enriched uranium dioxide core, operates as a fast reactor, and is cooled by high temperature molybdenum – 13 percent rhenium, heat pipes with lithium working fluid. Electric power is generated by thermoelectric converters, with the bulk of the thermal energy rejected to space by a radiator panel system. GRA

NEW MESON-NUCLEUS DYNAMICS FROM STUDIES OF (PION, ETA MESON) (PION, 2 PION)
L. C. Liu 1985 11 p Presented at the 4th International Conference on Nuclear Reaction Mechanisms, Varenna, Italy, 10-15 Jun. 1985
(Contract W-7405-eng-36)
(DE85-012753; LA-UR-85-1952; CONF-8506120-1) Avail: NTIS HC A02/MF A01

During the past ten years, significant progress has been made in understanding the role of the delta(1232) in nuclear physics. Most of the information on delta-nucleus dynamics was obtained from direct studies of pion-nucleus interactions at pion kinetic energies between 30 and 300 MeV. As the energy of a pion incident on a nucleon increases, various production channels in pi N collisons become important. Consequently, understanding these production processes in nuclei represents a natural first step in our pursuit of the high-energy frontier of nuclear physics. In this brief talk, I shall focus my discussion on (Pi, 2 Pi) and (Pi, nu) reactions which are the two most important production channels at pion kinetic energies below 1 GeV. DOE

DEVELOPMENT OF PERFORMANCE ASSESSMENT METHODOLOGY FOR NUCLEAR WASTE ISOLATION IN GEOLOGIC MEDIA
E. J. Bonano, M. S. Y. Chu, R. M. Cranwell, and P. A. Davis 1985 14 p Presented at a conference
(Contract DE-AC04-76DP-00789)
(TI85-017813; SAND-85-0456C; CONF-851232-1) Avail: NTIS HC A02/MF A01

The burial of nuclear wastes in deep geologic formations as a means for their disposal is an issue of significant technical and social impact. The analysis of the processes involved can be performed only with reliable mathematical models and computer codes as opposed to conducting experiments because the time scales associated are on the order of tens of thousands of years. These analyses are concerned primarily with the migration of radioactive contaminants from the repository to the environment accessible to humans. Modeling of this phenomenon depends on

a large number of other phenomena taking place in the geologic porous and/or fractured medium. These are ground-water flow, physicochemical interactions of the contaminants with the rock, heat transfer, and mass transport. Once the radionuclides have reached the accessible environment, the pathways to humans and health effects are estimated. A performance assessment methodology for a potential high-level waste repository emplaced in a basalt formation has been developed for the U.S. Nuclear Regulatory Commission. DOE

GEOLOGIC AND HYDROLOGIC CHARACTERIZATION AND EVALUATION OF THE BASIN AND RANGE PROVINCE RELATIVE TO DISPOSAL OF HIGH-LEVEL RADIOACTIVE WASTE. PART 3: GEOLOGIC AND HYDROLOGIC EVALUATION
M. S. Bedinger, K. A. Sargent, and B. T. Brady 1985 31 p
(TI85-901876; USGS-CIRC-904C-Pt-3) Avail: NTIS HC A03/MF A01

This report describes the first phase in evaluating the geology and hydrology of the Basin and Range Province for potential suitability of geohydrologic environments for isolation of high-level radioactive waste. The evaluation of the Province applies the guidelines, discussed in Part 1 (Bedinger, Sargent, and Reed, 1983) of this report to the geologic and hydrologic information compiled for the Province in Part 2 (Sargent and Bedinger, 1983). The geologic and hydrologic factors considered in the Province evaluation include distribution of potential host rocks, tectonic conditions and data on ground-water hydrology. Potential host media considered include argillaceous rocks, tuff, basaltic rocks, granitic rocks, evaporites, and the unsaturated zone. The tectonic factors considered are Quaternary faults, late Cenozoic volcanics, seismic activity, heat flow, and late Cenozoic rates of vertical uplift. Hydrologic conditions considered include length of flow path from potential host rocks to discharge areas, interbasin and geothermal flow systems and thick unsaturated sections as potential host media. AN ESTIMATE OF THE CONTRIBUTIONS OF BELLOWS TO THE IMPEDANCES AND BEAM INSTABILITIES OF THE SSC
Joseph Bisognano and King Yuen Ng Jul. 1985 17 p Prepared in cooperation with Fermi National Accelerator Lab., Batavia, Ill.
(DE85-017363; FNAL-TM-13402) Avail: NTIS HC A02/MF A01

Between sections of the vacuum chamber, bellows are needed to compensate for thermal expansion and transverse offsets. For beampipe made of stainless steel with a coefficient of linear expansion 19 x 10 to the -6 C and a temperature variation of approx. 316 C, the allowance for bellows is approx. 1.2% of the total length of the beampipe, if we assume that the bellows are 50% compressible. This implies 1.08 km of bellows for Design A of the SSC which has a circumference of 90 km. DOE

TEVATRON EXTRACTION MICROCOMPUTER
L. Chapman, D. A. Finley, M. Harrison, and W. Merz Jun. 1985 4 p Presented at the 1985 Particle Accelerator Conference (NPS), Vancouver, British Columbia, 13-16 May 1985
(DE85-016985; FNAL-TM-1322; CONF-850504-25) Avail: NTIS HC A02/MF A01

Extraction in the fErmilab Tevatron is controlled by a multiprocessor Multibus microcomputer system called QXR (Quad extraction Regulator). QXR monitors several analog beam signals and controls three sets of power supplies: the bucker and pulse magnets at a rate of 5760 Hz, and the QXR magnets at 720 Hz. QXR supports multiple slow spills (up to a total of 35 seconds) with multiple fast pulses intermixed. It linearizes the slow spill and bucks out the high frequency components. Fast extraction is done by outputting a variable pulse waveform. Closed loop learning techniques are used to improve performance from cycle to cycle for both slow and fast extraction. The system is connected to the Tevatron clock system so that it can track the machine cycle. QXR is also connected to the rest of the Fermilab control system, ACNET. Through ACNET, human operators and central computers can monitor and control extraction through communications with QXR. The controls hardware and software both employ some standard and some specialized components. This paper gives an overview of QXR as a control system; another paper summarizes performance. DOE

EVALUATION OF GEOLOGIC AND GEOPHYSICAL TECHNIQUES FOR SURFACE-TO-SUBSURFACE PROJECTIONS OF GEOLOGIC CHARACTERISTICS IN CRYSTALLINE ROCK
Jul. 1985 313 p refs
(Contract DE-AC02-83CH-10139)
(DE86-000221; BMI/OCRD-22) Avail: NTIS HC A14/MF A01

Granitic and gneissic rock complexes are being considered for their potential to contain and permanently isolate high-level nuclear waste in a deep geologic repository. The use of surface geologic and geophysical techniques has several advantages over drilling and testing methods for geologic site characterization in that the techniques are typically less costly, provide data over a wider area, and do not jeopardize the physical integrity of a potential repository. For this reason, an extensive literature review was conducted to identify appropriate surface geologic and geophysical techniques that can be used to characterize geologic conditions in crystalline rock at proposed repository depths of 460 to 1,220 m. Characterization parameters such as rock quality; fracture orientation, spacing; and aperture; depths to anomalies; degree of saturation; rock body dimensions; and petrology are considered to be of primary importance. Techniques reviewed include remote sensing, geologic mapping, petrographic analysis, structural analysis, gravity and magnetic methods, electrical methods, and seismic methods. Each technique was reviewed with regard to its theoretical basis and field application; geologic parameters that can be evaluated; advantages and limitations, and, where available, case history applications in crystalline rock. Available information indicates that individual techniques provide reliable information on characteristics at the surface, but have limited success in projections to depths greater that approximately 100 m. A combination of integrated techniques combines with data from a limited number of boreholes would significantly improve the reliability and confidence of early characterization studies to provide qualitative rock body characteristics for region-to-area and area-to-site selection evaluations. The Los Alamos field research program involving technology development for arid shallow land burial (SLB) sites is described. Field data are presented for an integrated field experiment, which was designed to test individual SLB component experiments related to erosion control, biobarriers, and subsurface capillary and migration barriers. Field tests of biointrusion barriers at waste disposal sites and in experimental plots are reported. The results of a joint DOE/NRC experiment to evaluate leaching and transport of sorbing (Cs, Sr, Li) and nonsorbing (I, Br) solutes in sandy silt backfill are presented for steady-state and unsteady-state flow conditions. A capillary barrier experiment performed in a large caisson (3-m diameter, 6.1 m deep) is described and a year's worth of field data is presented. DOE

STATUS OF CORRECTIVE MEASURES TECHNOLOGY FOR SHALLOW LAND BURIAL AT ARID SITES
W. V. Abeele, J. W. Nyhan, B. J. Drennon, E. A. Lopez, W. J. Harrera, and G. J. Langhorst 1985 21 p refs Presented at the 7. Annual DOE LLWMP Participants Information Meeting, Las Vegas, Nev., 10 Sep. 1985
(Contract W-7405-eng-36)
(DE86-000760; LA-UR-85-3277; CONF-8509121-16) Avail: NTIS HC A02/MF A01

The field research program involving corrective measure technologies for arid shallow land burial sites is described. Soil erosion and infiltration of water into a simulated trench cap with various surface treatments was measured and compared with similar data from agricultural systems across the United States. Report of field testing of biointrusion barriers continues at a closed-out waste disposal site at Los Alamos. Final results of an experiment designed to determine the effects of subsidence on the performance of a cobble-gravel biobarrier system are reported, as well as the results of hydrologic modeling activities involving biobarrier systems. MAGNETIC MEASUREMENTS ON THE RING DIPOLES AND QUADRUPOLES FOR THE LOS ALAMOS PROTON STORAGE RING
R. Schermer, I., B. Blind, A. J. Jason, and G. A. Sawyer 1985 5 p refs Presented at the 9th International Conference on Magnet Technology, Zurich, Switzerland, 9 Sep. 1985
(Contract W-7405-eng-36)
(DE86-000785; LA-UR-85-3155; CONF-850920-4) Avail: NTIS HC A02/MF A01

This paper discusses magnetic measurements and shimming performed on the ring dipoles and quadrupoles for the Los Alamos Proton Storage Ring (PSR). For the dipoles, point-by-point field maps were obtained using a search coil that could be scanned over a three-dimensional grid. By appropriate machining of removable end blocks, all magnet lengths were adjusted to within 0.01% of a nominal value and all integrated multipoles were set within tolerance. Integrated fields of 20 PSR quadrupoles were measured using a rotating Morgan Coil and a digital spectrum analyzer. The magnets were shimmed to specifications by adjusting steel bolts threaded through the field clamps. DOE

NONINTERCEPTIVE BEAM DIAGNOSTICS
D. D. Chamberlin 1985 9 p refs Presented at the Workshop on High Brightness, High Current, High Duty Factor Ion Injectors, San Diego, Calif., 21 May 1985
(Contract W-7405-eng-36)
(DE86-000791; LA-UR-85-2941; CONF-8505164-8) Avail: NTIS HC A02/MF A01

The need for accurate real-time diagnostics is critical for high-power particle beams. This paper describes the present level of development of noninterceptive devices for these beams. Discussion will be related to diagnostic measurements as they occur along the beamline, from ion-source performance through presentation to an RFQ and measures of the RFQ output, using the CW beam at Los Alamos as a guide. REPORT OF THE WORKSHOP ON LOW-TEMPERATURE NEUTRON IRRADIATION
1985 35 p Presented at the Workshop on Low Temperature Neutron Irradiation, Oak Ridge, Tenn., 29 May 1985 Prepared in cooperation with Massachusetts Inst. of Tech., Cambridge
(DE85-018118; CONF-8505182-Summ) Avail: NTIS HC A03/MF A01

This Workshop was held at Oak Ridge National Laboratory May 29 to 31, 1985, to aid in preparing for the use of the National Low-Temperature Neutron Irradiation Facility (NLTNIF), which is being built at the Bulk Shielding Reactor at Oak Ridge National Laboratory and is scheduled to be ready for experiments late in 1985. NLTNIF will be operated as a user facility, with no cost to users for the irradiations for approved experiments. Purposes of the Workshop were to review research areas for which NLTNIF can be used, and to provide necessary experimental details about the facility for potential users. One day consisted of a series of presentations on scientific topics relevant to NLTNIF. Summaries of these talks are included in this report. DOE

TEMPERATURE DEPENDENCE OF THE MAGNETIC CORRELATION IN AMORPHOUS SPIN GLASS (Ni-Mn)75P16B6Al3 DETER-

MINED BY NEUTRON SCATTERING
W. Yu, T. Egami, M. E. Chen, J. D. Axe, and K. V. Rao 1985 9 p refs Presented at the International Conference on Magnetism, San Francisco, Calif., 26 Aug. 1985 Prepared in cooperation with Brookhaven National Lab., Upton, N.Y. and Royal Inst. of Tech., Stockholm, Sweden
(Contract DE-AC02-76CH-00016)
(DE85-018487; BNL-36884; CONF-850890-19) Avail: NTIS HC A02/MF A01

Neutron scattering experiments were carried out on amorphous Ni sub 1-x-Mn sub x 75p1bB6Al3 (x = 0,0.4) at different temperatures. A strong diffraction peak at around 1.7 A(-1) was found for the sample with x = 0.4, but not for the one with x = 0. This peak is mostly due to the short range ordering of Ni and Mn, but also in part due to magnetic correlations among the Mn spins. The temperature dependence of the magnetic correlation satisfactorily explains the temperature dependence of the resistivity of this sample. DOE

ASSESSMENT OF NEUTRON REQUIREMENTS AND POTENTIAL SOURCES FOR FUSION DEVELOPMENT Final Report
J. W. Davis May 1985 249 p Sponsored by EPRI
(EPRI Proj. 1969-4)
(DE85-901723; MDC-E-3015) Avail: NTIS HC A11/MF A01

The particular aims of this project were to (1) identify the anticipated critical failure modes for fusion components exposed to high neutron flux, (2) determine the minimum acceptable number of simple material property tests which would be required for acceptance of a material for use in these components, (3) identify appropriate neutron sources for this testing, and (4) identify and define appropriate subscale tests which address the problem of interactive material effects in these components. The high-flux components examined in this study were limited to the first wall, breeder and breeder structure. Eleven critical failure modes for these components were identified and ranked. Materials properties relevant to each of these failure modes were identified and ranked, and material property test matrices were devised. The minimum number of irradiated materials tests identified for the first wall materials under consideration (PCA, HT-9 and V-15Cr-5Ti) was found to be 904, a significant decrease from earlier studies. The minimum number of irradiated tests identified for the various breeder materials (Li2O, LiAlO2, Liquid Li, and Liquid Li-Pb) was 260. EBR-II, HFIR and FFTF were identified as the most appropriate fission-based sources for fusion materials testing. DOE

INCORPORATION OF RADIOHALOGENS VIA VERSATILE ORGANOMETALLIC REACTIONS: APPLICATIONS IN RADIOPHARMACEUTICAL CHEMISTRY
P. C. Srivastava, M. M. Goodman, and F. F. Knapp, Jr. 1985 7 p refs Presented at the 2nd International Symposium on the Synthesis and Application of Isotopically Labeled Compounds, Kansas City, Mo., 3 Sep. 1985
(Contract DE-AC05-84OR-21400)
(DE86-000087; CONF-8509173-1) Avail: NTIS HC A02/MF A01

Factors that must be considered for the design of radiohalogen-ated radio-pharmaceuticals include the stability and availability of the substrate, the physical half-life of the radiohalogen and the in vivo stability of the radiolabel. Vinyl and phenyl radiohalogen bonds show more in vivo stability than the alkyl radiohalogen bonds. Consequently, a variety of methods suitable for the synthesis of tissue specific radiopharmaceuticals bearing a vinyl or phenyl radiohalogen have been developed involving the synthesis and halogenation of metallovinyl and phenyl intermediates. The halogens and metallation reactions include iodine and bromine and alanation, boronation, mercuration, stannylation, and thallation, respectively. DOE

LAWRENCE BERKELEY LABORATORY MAGNETIC-MOMENT SORTING SYSTEM
D. H. Nelson, P. J. Barale, M. I. Green, and D. A. VanDyke Jul. 1985 6 p Presented at the 9th International Conference on Magnet Technology, Zurich, Switzerland, 9 Sep. 1985
(Contract DE-AC03-76SF-00098)
(DE86-000610; LBL-19292; CONF-850920-2) Avail: NTIS HC A02/MF A01

The Magnetic Measurements Engineering Group at Lawrence Berkeley Laboratory (LBL) has designed and built, and is currently using, a Magnetic-moment Measurement and Sorting System (MMSS). The MMSS measures magnetic moments of permanent-magnet material and sorts the material according to selected criteria. The MMSS represents the latest application of the LBL General Purpose Magnetic Measurement Data Acquisition System reported on a MT-8. We describe the theoretical basis for the MMSS, the analog and digital components, and a unique method of calibrating the MMSS using only measured electrical quantities. We also discuss the measurement and sorting of permanent-magnet material to be incorporated in beam-line elements (dipoles and quadrupoles) in the Lawrence Livermore National Laboratory Advanced Test Accelerator Beam Director. DOE

IF YOU LIKE LOW P/SUB T/ MULTIPARTICLE PHYSICS, YOU'LL LOVE NUCLEUS-NUCLEUS INTERACTIONS OR Do E/SUB T/ DISTRIBUTIONS OBEY KNO SCALING IN HIGH ENERGY pp AND NUCLEUS-NUCLEUS COLLISIONS
M. J. Tannenbaum 1985 10 p refs Presented at the International Symposium on Multiparticle Dynamics, Kiryat Anavim, Israel, 1 Jun. 1985
(Contract DE-AC02-76CH-00016)
(DE86-000633; BNL-37046; CONF-8506194-3) Avail: NTIS HC A02/MF A01

Measurements of neutral transverse energy spectra in p-p, d-d and (ALPHA)-(ALPHA) interactions at the CERN ISR are presented. The source of transverse energy is the emission of relatively low P sub T particles distributed uniformly. Analysis of the (ALPHA)(ALPHA) data in terms of multiple nucleon-nucleon collisions is most convenient when Gamma distributions are used to represent the spectral shapes. This distribution bears a strong relationship to the Negative Binomial Distribution which describes multiplicity distributions in pp and p anti p interactions over the full available energy range. Extensive analysis of the data is presented in terms of Nuclear Models. However, the best fit to the pp and (ALPHA)(ALPHA) data is a single Gamma distribution scaled by the mean value. This property is also known as KNO scaling. DOE

OVERVIEW OF DOE/ONS CRITICALITY SAFETY PROJECTS
R. W. Barber, B. P. Brown, and C. M. Hopper 1985 17 p Presented at the Topical Meeting on Criticality Safety and the Storage of Fissile Material, Jackson, Wyo., 9 Sep. 1985 Prepared in cooperation with Oak Ridge National Lab., Tenn.
(Contract DE-AC05-84OR-21400)
(DE86-001334; CONF-850917-6) Avail: NTIS HC A02/MF A01

The evolution of Federal involvement with nuclear criticality safety has traversed through the 1940's and early 1950's with the Manhattan Engineering District, the 1950's and 1960's with the Atomic Energy Commission, the early 1970's with the Energy Research and Development Administration, and the late 1970's to date with the US Department of Energy. The importance of nuclear criticality safety has been maintained throughout these periods. However, criticality safety has received shifting emphases in research and applications, promulgations of regulations and standards, origins of fiscal support and organization. In June 1981 the Office of Nuclear Safety was established in response to a Department of Energy study of the impact of the March 1979 Three Mile Island accident. The organizational structure of the ONS, its program for establishing and maintaining a progressive nuclear criticality safety program, and associated projects, and current history of ONS's fiscal support of program projects is presented. With the establishment of the ONS came concomitant missions to develop and maintain nuclear safety policy and

requirements, to provide independent assurance that nuclear operations are performed safely, to provide resources and management for DOE responses to nuclear accidents, and to provide technical support. In the past four years, ONS has developed and initiated a continuing Department Nuclear Criticality Safety Program in such areas as communications and information, physics of criticality, knowledge of factors affecting criticality, and computational capability. A TWO-FLOW MODEL TO SIMULTE THE INTERACTION OF IRRADIANCE WITH A SUBMERGED PLANT CANOPY Ph.D. Thesis
Steven Gary Ackleson 1985 158 p
Avail: Univ. Microfilms Order No. DA8517685

A model is developed to simulate the natural light field around and within a canopy of submerged aquatic plants. From a remote sensing point of view, techniques or monitoring earth resources, have steadily shifted since the early 1970's photography to orbiting multispectral scanners. However, in order to design the optimum sensor for detecting submerged features and to accurately interpret the acquired imagery, a thorough understanding of the radiative transfer processes is required. The same is true for estimating productivity. The model is constructed within the confines of the two-flow approach by combining two similar models--one developed for optically shallow water and the other designed for terrestrial plant canopies. The model is qualitatively assessed for accuracy and physical correctness by comparisons with other models of known accuracies, by conducting a sensitivity analysis of all canopy related parameters and by applying the model to several real world problems. The results indicate that the model yields qualitatively accurate results and that, for the most part, physical realities are preserved. Dissert. Abstr.

DESIGN, CONSTRUCTION AND INITIAL APPLICATION OF A LOW-LIGHT-LEVEL IMAGING DETECTOR Ph.D. Thesis
Arne Anthon Henden 1985 221 p
Avail: Univ. Microfilms Order No. DA8516616

A slow-scan (8 seconds per frame) television system utilizing a silicon-intensified target (SIT) vidicon has been constructed. Such a TV system, used in a two-dimensional (imaging) mode, permits the accurate measurement of the light intensity from extremely faint astronomical objects. The system consists of a detector head/offset guider assembly that mounts on the telescope; a camera control unit that supplies the analog vidicon voltages and performs video conditioning; and a Z80 microcomputer that controls the data acquisition procedure. The system accommodates several different types of vidicons. Computer software was written to control the data acquisition and to perform image processing. Examples are given of the application of this system to cluster photometry, narrowband photography, and spectroscopy. A detailed study of the nuclear region of the galaxy NGC 2903 is presented. Dissert. Abstr.

POLYCHROMATIC TIME-INTEGRATING OPTICAL PROCESSOR FOR HIGH-SPEED AMBIGUITY PROCESSING Patent
J. N. Lee, inventor (to Navy) Issued 23 Jul. 1985 9 p Supersedes AD-D010376
(AD-D011942; US-Patent-4,531,195; US-Patent-Appl-SN-495028; US-Patent-Class-364-822) Avail: US Patent and Trademark Office CSCL 20/6

A signal processor for generating the ambiguity integral using a modulatable, broadband, incoherent lightsource, a multiplicity of acousto-optic cells and diffraction gratings, and a two-dimensional time-integrating photodetector array. The various colors of the source spectrum are shifted by differing radio frequencies. These modified spectral components are also modulated by and input signal and serve as input sources for performing a multiplicity of correlations using an acoustooptic cell with an unknown Doppler-shifted signal. The answer is displayed on a two-dimensional time-integrating photodetector array where the spectral components are dispersed within the columns. The row corresponding to the color that has been properly frequency-compensated will contain the correlation or ambiguity peak, thereby identifying the Doppler component. Position within the row determines range. Author (GRA)

THE EFFECTS OF HYDROSTATIC PRESSURE ON OPTICAL FIBERS (FISCAL YEAR 1983 REPORT) Research Report, Oct. 1982 - Oct. 1983
N. Kamikawa Apr. 1985 34 p
(F66-512)
(AD-A159915; NOSC/TR-1023) Avail: NTIS HC A03/MF A01 CSCL 20/6

This report stems from a project tasked to investigate experimentally the effects of deep-ocean hydrostatic pressure on (polymer-coated) optical fiber transmission. It was concluded that optical fibers could be designed so that pressure equivalent to a 6-km (20,000-ft) ocean depth does not increase fiber losses. This conclusion was based on an axial compression model and experiments performed on polymercoated graded-index fibers. Defects in the coating were identified as additional causes of loss increase. Defectively coated fibers exhibited very large excess loss in hydrostatic environments. This report summarizes work performed in FY 83. A pressure model and fiber and coating material experiments are described and conclusions and recommendations stated. GRA

OPTICAL INTERARRAY PROCESSING Final Report, 1 Jul. 1983 - 28 Feb. 1985
P. R. Haugen 7 Nov. 1985 55 p
(Contract N00014-83-C-0554)
(AD-A160256) Avail: NTIS HC A04/MF A01 CSCL 17/1

The objective of this contract was to design, fabricate, and test an optical processor to perform an ambiguity function to detect relative time delay and frequency shift between a pair of passive sonar receivers. The optical architecture used in this program is the unique linear phase shifter (LIPS) architecture which was developed at Honeywell. The support electronics for the optical processor were designed around a PDP-11/23 minicomputer. The PDP-11/23 controls the functions of the optical processor, stores input and output data, and provides I/O to an outside Host computer. Real sonar data on synthetic calibration data were processed to demonstrate the functionality of the system. Overall, the objectives of this program were completed. The result of this program was the development of an optical processing system capable of supporting different optical architectures or processing scenarios. Using a minicomputer controller gives the system the required flexibility to handle different tasks. The LIPS optical architecture used for this program is capable of running at 500 frames/seconds if it were not I/O limited at the detector output. This rate corresponds to approximately a 10 giga-multiply/adds per second processing rate. The electronic I/O limited the processing rate to approximately 5 frames/second. GRA

CALCULATION OF H2O FAR-WING ABSORPTION WITHIN THE SINGLE-PERTURBER APPROXIMATION Final Report, Dec. 1981 - Jan. 1985
R. W. Davies and S. F. Fahey Feb. 1985 67 p
(AF Proj. 2310)
(AD-A160405; AFGL-TR-85-0033) Avail: NTIS HC A04/MF A01 CSCL 07/4

Calculations of H2O self-broadening have been carried out for near and far-wing absorption. For the far-wing case, the calculations

are based on the single perturber approximation. Only collisions involving continuum states of the two-body system are considered, and an uncoupled-line approximation is assumed. An isotropic interaction potential is included exactly, while anisotropic interactions are treated in perturbation theory. For the anisotropic interaction, both dipole-dipole and dipole-quadrupole collisions are considered in detail. Results of the present calculations indicate, in the near wings, that the dipole-dipole interaction is strongly dominant. As one progresses to the far wings, it is found that the dipole-quadrupole and (by implication) the higher-order multipole interactions become increasingly important. The general indications are that the far-wing absorption is dominated by strong, short-ranged interactions which require detailed analysis. GRA

SPECTRALLY SELECTIVE SHUTTER MECHANISM
E. F. Cross, G. D. Wiemokly, O. L. Gibb, and W. A. Garber 9 Sep. 1985 44 p
(Contract F04701-83-C-0084)
(AD-A160619; TR-0084A(5930-01)-2; SD-TR-85-48) Avail: NTIS HC A03/MF A01 CSCL 20/6

Several state-of-the-art detection and image systems require synchronous high-speed shuttering of incoming irradiance. This shuttering action is necessary in many instances to increase signal-to-noise ratio, obtain high-speed (low-retention) imagery, and provide single-event observations. Presently, this type of snap-shot imagery is approximated by rotating chopper wheel methods that sweep an aperture across the focal plane. At faster aperture rates, these mechanical chopper systems become more complex and maintenance of image fidelity is very difficult. This novel, spectrally selective shutter mechanism provides true snap-shot imagery. Despite some limitations, such a mechanism is ideally suited to high flux, high background, and rapidly changing imaging visualization, and can be used to monitor flow visualization, chemiluminescence phenomena, and laser operation. The optomechanical technique described in this report uses the rotation of one or two narrowband spectral filters to provide open-shutter times in the millisecond range. The resulting performance of the two-filter assembly is governed by the physical principle that increasing angular tilt of a narrowband interference filter that causes the bandpass parameter to shift progressively toward shorter wavelengths. GRA

CLEAR-AIR TRANSMISSION IN THE 8 TO 12-MICROMETER BAND AT SELECTED STATIONS
D. A. Stewart Aug. 1985 49 p
(AD-A160625; AD-E950767; AMSMI/RR-85-1-TR) Avail: NTIS HC A03/MF A01 CSCL 20/6

Horizontal atmospheric transmission of energy in the 8 to 12-micrometer band is examined for distances of 1, 2, 3, 5, 7, and 10 km in four geographical regions. The only absorber to be considered is water vapor because it absorbs much more energy than any other molecular constituent of the atmosphere. Annual means are approximately 80 percent transmission along 1-km path at 5 German stations, at Osan, Korea, and at the Middle Eastern stations of Baghdad, Iraq, and Jerusalem, Israel. Annual means at Tel Aviv, Israel, and Dhahran, Saudi Arabia, are a few percent lower, and the annual mean at Tehran, Iran, is a few percent higher. Annual mean transmissions in Central America are below 70 percent for a 1-km path at low-lying coastal stations and generally below 75 percent throughout the region. The annual cycle is weak in Central America, very strong at Osan, and intermediate at the remaining stations. The report also contains tables of monthly and annual standard deviations of transmission for paths of 1, 2, 3, 5, 7, and 10 km. Author (GRA)

DESIGN OF THE NSLS INFRARED BEAM LINE MIRROR NO. 1
R. Alforque, P. Z. Takacs, M. Shleifer, J. Colbert, and J. Williams 1985 15 p refs Presented at the 2nd International Synchrotron Radiation Instrumentation Conference, Stanford, Calif., 29 Jul. 1985 Prepared in cooperation with Comarco, Inc., Ridgecrest, Calif.
(Contract DE-AC02-76CH-00016)
(DE85-018481; BNL-36902; CONF-850734-7) Avail: NTIS HC A02/MF A01

The mechanical design of the Infrared Beam Line Mirror No. 1 (IRBL M1) at the NSLS facility was done with the aid of finite element modeling. Preliminary heat load calculations indicated that the Gaussian peak power density incident on M1 is about 345.8 w/sq. cm. The thermal gradient due to this concentrated high heat density striking M1 may result in undesirable distortions that can seriously impair its function. In addition, the thermal stress might reach levels beyond the yield strength of the mirror thereby compromising its structural integrity. Hence, a finite element model was developed to study the associated thermal and structural problems. The generation of the finite element mesh was done with the PREP7 module of ANSYS. After applying the appropriate parameters and boundary conditions, a thermal analysis was performed and the results were passed into the structural model in order to obtain the displacement/stress solution. A similar finite element model was analyzed using SUPERTAB and SUPERB of SDRC's IDEAS. DOE

The term luminescence is normally applied to light emission that is not explainable by the mechanisms discussed by the other speakers in this meeting. Specifically, it is not transition radiation, surface plasmon radiation, or bremsstrahlung. One normally thinks of luminescence as arising from one-electron transitions within a medium. This talk consists of an overview of luminescence from condensed matter under irradiation by either energetic particles or photons. The author begins with organic molecules, where luminescence is best understood, and then discusses inorganic insulators and metals. Finally, the dependence of yield upon projectile species and velocity is discussed, and predictions are made concerning the relative effectiveness of electrons, protons, and hydrogen atoms in exciting luminescence. POLOIDAL ROTATION OF REVERSED FIELD PINCH PLASMA
H. Arimoto, K. I. Sato, A. Nagata, S. Masamune, Y. Aso, K. Ogawa, S. Yamada, A. Matsuoka, H. Oshiyama, and T. Tamaru Nov. 1985 14 p refs
(IPPJ-749) Avail: NTIS HC A02/MF A01

The poloidal rotation of Reversed Field Pinch Plasma is clearly observed by the measurements of magnetic fluctuations and of Doppler shift of impurity lines. RFP plasma rotates in the direction of the electron diagmagnetic drift to the toroidal field at the wall. Time behaviors of rotation frequency are examined. The rotation begins immediately after setting up RFP configuration and reaches maximum value before the peak current. Author

HELICAL FLUCTUATION IN REVERSED FIELD PINCH (RFP) PLASMA
H. Arimoto, A. Magata, K. I. Sato, S. Masamune, Y. Aso, K. Ogawa, S. Yamada, A. Matsuoka, H. Oshiyama, and T. Tamaru Nov. 1985 14 p refs
(IPPJ-748) Avail: NTIS HC A02/MF A01

The overall behaviors of helical fluctuations in RFP plasma are examined. Immediately after the RPF configuration is set up, ordered helical fluctuation begins to occur, and at the nearly same time toroidal flux enhancement propagates towards the direction of electron current flow. In this phase m = 1, n = approx. 10 to 12 modes, where m and n are poloidal and toroidal mode numbers, are generated in positive flux region. In the current termination phase, m = 2 mode is dominant. CURRENT DRIVE BY FAST MAGNETOSONIC WAVES NEAR THE LOWER HYBRID FREQUENCY IN THE JIPP T-IIU TOKAMAK
K. Ohkubo, Y. Hamada, Y. Ogawa, A. Mohri, R. Akiyama, R. Ando, Y. Hirokura, E. Kako, K. Kawahata, Y. Kawasumi et al Oct. 1985 17 p refs
(IPPJ-746) Avail: NTIS HC A02/MF A01

Current drive by fast magnetosonic waves is successfully performed in the JIPP T-IIU tokamak by means of a four-element dipole antenna array with Faraday shield. The plasma current of about 40 kA is sustained by RF power of about 50 kW in the low density plasma of 2 to 4 x 10 to the 12th power/cu cm with an efficiency comparable to that of the slow wave current drive. A clear density limit for fast magnetosonic current drive exists contrary to theoretical expectations based on linear wave propagation. Author

MAGNETOHYDRODYNAMIC STABILITY OF SPHEROMAK PLASMA IN SPHEROIDAL FLUX CONSERVER: APPLICATION OF MERCIER CRITERION
Shobu Kaneko and Atsushi Kamitani Nov. 1985 25 p refs
(IPPJ-747) Avail: NTIS HC A02/MF A01

The magnetohydrodynamic (MHD) equilibrium configurations of spheromak plasmas in a spheroidal flux conserver are determined by use of a pressure distribution whose derivative dp/d psi vanishes on the magnetic axis, and by use of an optimized distribution. Here p is the pressure and psi is the flux function. These equilibria are shown to be stable for symmetric modes. The stability for localized modes is investigated by the Mercier criterion. The values of the maximum beta ratio are evaluated for both pressure distributions and are shown to become about two times larger by optimization. If the condition, g(axis) < 1, is required, the values of the maximum beta ratio are found to be less than 30%. The oblate spheroidal flux conserver is shown to be better than the toroidal conserver with a rectangular cross section from the standpoint of stability. M.G.

(KGI-Preprint-067; ISSN-0349-2656) Avail: NTIS HC A10/MF A01

The dispersion relation of linear waves in a nonrelativistic, collisionless and homogeneous magnetized plasma is solved numerically. Electrostatic and electromagnetic waves with frequencies from below the ion gyrofrequency to above the electron gyrofrequency are studied for all angles of propagation. Modes occurring in a cold plasma and waves dependent on thermal effects are included. Dispersion surfaces, i.e., plots of frequency versus wave vector components, are presented for plasma models. This presentation shows all interesting waves clearly and reveals how different modes are related. The dispersion surfaces can be used as an aid, for example, when comparing wave observations and theory, and they may help to avoid confusing nomenclature. Author (ESA)

HC A10/MF A01

Using dispersion surfaces (plots of frequency versus wave vector components) it is shown that whistlers, hiss, chorus, and saucers in space plasmas often correspond to one wave mode. Broadband electrostatic noise can also propagate in this mode. Since electromagnetic theory for all angles of propagation relative to the ambient magnetic field is used, the smooth transition between electrostatic and electromagnetic waves can be described in terms of a gradual change of the wave vector. To give an example of an instability over a wide range of wave vectors, a beam of auroral (keV) electrons is introduced. The highest temporal and spatial growth rates caused by such a beam can occur at the plasma frequency. However, a dispersion surface may be used to give simple arguments showing that in an inhomogeneous plasma, the strongest emissions may occur below the plasma frequency.

HC A10/MF A01

The wave modes below the proton gyrofrequency in a homogeneous, nonrelativistic multicomponent plasma are studied. The dispersion relation and the dielectric tensor are discussed. Numerical methods are used to study the propagation properties and the polarization for all angles of propagation relative to the ambient magnetic field. Analytical dispersion equations are used. Modes close to multiples of ion gyrofrequencies are considered. Results reveal that waves destabilized by ion distributions with temperature or loss-cone anisotropies can propagate in nearly any direction. The largest growth rates are found for parallel propagation, but many loss-cone distribution give emissions only for propagation at angles of > 45 deg off the ambient magnetic field. Hot particle distributions may influence temporal growth and group velocity, and thus cause nonconvective instabilities. High temperature distributions may also, even when they are anisotropic, significantly increase damping in regions of frequency wave vector space.

HC A10/MF A01

It is shown that electrostatic ion waves can be resonantly destabilized in the presence of cool electrons, and that these emissions often occur close to multiples of the ion frequency. Ion loss-cone distributions may nonresonantly destabilize emissions near the lower hybrid frequency. For wave vectors strictly perpendicular to the ambient magnetic field, these emissions may be harmonically spaced by the ion gyrofrequency, but an investigation of all propagation angles shows that the waves often are broadband. In connection with these nonresonant instabilities, negative energy modes can occur. These modes may lead to explosive instabilities when they nonlinearly interact with other waves.

HC A10/MF A01

Simultaneous observations of wave spectra and particle velocity distributions obtained by the S3-3 satellite on auroral field lines are studied. Emissions below the lower hybrid frequency occur just below multiples of the proton gyrofrequency. At higher frequencies the observed spectra show peaks just above such multiples. The ion and electron distributions are modeled, and numerical methods are used to calculate the corresponding spatial wave growth rates. This growth agrees well with the observed emissions. The major source of free energy is a positive slope perpendicular to the ambient magnetic field in the ion velocity distribution.

HC A04/MF A01 CSCL 20/9

This report describes progress during the second year of a research program on the Fundamental Processes in Partially Ionized Plasmas conducted in the High Temperature Gasdynamics Laboratory at Stanford University. This research is directed to three major areas: recombination in molecular plasmas, discharge effects (plasma electrode interaction) and interaction of discharges and fluid dynamics. Recombination and ionization are fundamental processes that play a role in nearly all applications and natural phenomena that involve partially ionized plasma. Under the present program, experiments have been designed and theoretical analyses conducted to obtain a better knowledge of the rates of electron recombination in the presence of molecular species. Studies are continuing of the near-electrode region and the processes by which current is transferred between the plasma and the electrodes. The first stage of theoretical modeling of these processes has now been completed and published. A study of the interaction of discharges and fluid dynamics has measured the significant secondary flows caused by the interaction of a magnetic field with a current-carrying plasma.

This annual progress describes work done under AFOSR Contract 81-0093 during the period from March 15, 1984 to March 14, 1985. The experimental program accomplished extensive measurements of RF emissions from the classical Penning discharge which is operated in the UTK Plasma Science Laboratory. RF emissions were observed over a wide frequency range, megahertz to more than 1 gigahertz. These emissions appear to be incoherent; the emitted radiation intensity is approximately proportional to the electron number density. An important accomplishment underlying these RF emission measurements was the development a calibrated, broadband antenna with an approximately 100 megahertz to 1.2 gigahertz.

HC A02/MF A01

The work described in the present report arose out of a proposal submitted to the U.S. Department of Energy in August 1983. It was for renewal of the then existing Contract No. DE-AS03-7GSF0032G titled Simulations of fusion plasmas by a 3-D, E-M particle code. Under this contract, in previous years, the Principal Investigator and his students had developed a fully electromagnetic particle code that was then - and still remains, to the best of our knowledge - the most advanced code of its kind in existence. This TRI-dimensional STANford code, now called TRISTAN, follows the motion of about 5 x 10 to the 6 particles in a cubical volume divided up into 128 cells, i.e., each side of the cube is divided into 128 units. TRISTAN is written in ASSEMBLER language for the Cray-1 computer, and is carefully optimized. See Buneman, et al., (1980) for an account of the ideas that have gone into this code. DOE

RADIO FREQUENCY VACUUM FEEDTHROUGHS FOR HIGH-POWER ICRF HEATING APPLICATIONS
T. L. Owens, F. W. Baity, D. J. Hoffman, and J. H. Whealton 1985 6 p Presented at conference
(Contract DE-AC05-84OR-21400)
(DE85-016391; CONF-850310-117) Avail: NTIS HC A02/MF A01

Frequently, high-power pulsed ion cyclotron range of frequency experiments are limited by breakdown at the vacuum feedthrough. This paper describes the development and testing of vacuum feedthroughs to increase both reliability and capability. The ultimate goal of the program is to develop a continuous-wave feedthrough for the next generation of fusion experiments. A feedthrough concept currently under investigation consists of a simple, cylindrical alumina ceramic brazed between tapered coaxial conductors. A prototype has been tested to voltage levels in excess of 100 kV for 100-ms pulses and 70 kV for 5-s pulses at 28 MHz. Insertion-voltage-standing-wave ratios are < 1.15:1 for frequencies below 450 MHz. An upgraded water-cooled version being fabricated for use on TEXTOR will be described. DOE

TORSATRON EQUILIBRIUM AND STABILITY STUDIES
T. C. Hender, B. A. Carreras, L. A. Charlton, L. Garcia, H. R. Hicks, J. A. Holmes, and V. E. Lynch Aug. 1985 44 p
(Contract DE-AC05-84OR-21400)
(DE85-018088; ORNL/TM-9587) Avail: NTIS HC A03/MF A01

Equilibrium and stability results are presented for the Advanced Toroidal Facility (ATF) device. The results of three-dimensional equilibrium calculations and free boundary average method calculations are shown to be in good agreement with previous fixed boundary average method results. These favorable comparisons serve as a valuable validation of the simple and computationally efficient fixed boundary average method. Stability calculations for the free boundary average method equilibria are also in good agreement with fixed boundary calculations, showing instability only when the plasma is shifted inward with an applied vertical field. PLASMA CURRENT PROFILE SHAPING WITH RF-CURRENT DRIVE
D. A. Ehst and K. Evans, Jr. 1985 15 p Presented at the Workshop on Tokamak Start-up - Problems and Scenarios Related To the Transient Phases of Long-Burn Operations, Erice, Italy, 14 Jul. 1985
(Contract W-31-109-eng-38)
(DE85-018414; CONF-850708-3) Avail: NTIS HC A02/MF A01

Calculations of RF current drive in a toroidal geometry are presented. The result is self-consistent in that the tokamak magnetic field generated by the RF-driven current is used to compute the wave trajectory and spatial damping in the plasma. In the next section we derive the quasilinear theory in an axisymmetric torus. In Section 3 we describe a numerical solution to this problem and investigate RF-generated equilibria in a reactor-relevant geometry (A = 6.0; major radius, R0 = 5.25 m; elongation k = 1.6; triangular boundary). By suitably adjusting the RF/plasma parameters a wide range of equilibria can be created. Although we have not optimized our RF-generated equilibria (in particular, we are limited at present to a narrow spectrum) we find evidence that equilibria can be sustained which should lead to attractive tokamak reactors. IPNS GROOVED, SOLID METHANE MODERATOR
J. M. Carpenter, A. W. Schulke, T. L. Scott, D. G. Wozniak, B. E. Benson, and B. D. Leyda 1985 11 p Presented at the International Collaboration on Advanced Neutron Sources, Oxon, England, 8 Jul. 1985 Prepared in cooperation with Energy Research and Generation, Inc., Oakland, Calif.
(Contract W-31-109-eng-38)
(DE85-018401; CONF-850795-4) Avail: NTIS HC A02/MF A01

There are two motives for using cold moderators in pulsed neutron sources: (1) to provide higher fluxes of long-wavelength neutrons; and (2) to extend the epithermal range with its short pulse structure to lower energies. For both these purposes solid methane, operated at the lowest possible temperatures, is the best material we know of. Two problems accompany the use of

solid methane in high power sources, namely heat transport in view of the low thermal conductivity of solid methane, and deterioration due to radiation damage. We have designed a system suitable to operate in IPNS, subject to nuclear heating of about 25 W, which incorporates an aluminum foam matrix to conduct the heat from within the moderator. We report the results of the first few months' operation and of a few tests that we have performed. DOE

TECHNICAL ADVISORY ON SSC SITE CRITERIA AND CATALOG OF SITE INFORMATION NEEDS
15 Jun. 1985 54 p
(Contract DE-AC03-76SF-00098)
(DE86-000218; DOE/SF-00098/T9; SSC-15) Avail: NTIS HC A04/MF A01

The Superconducting Super Collider, or SSC, is a proposed scientific instrument for the study of the fundamental nature of matter. In the SSC two 20-TeV beams of protons will be accelerated and counter circulated on an approximately circular path. The protons will be made to collide at six locations where detectors can be placed to count and measure the products of the collisions. These collisions, twenty times more energetic than in any existing facility, will enable scientists to probe deeper into the heart of matter in the quest for a deeper understanding of the universal forces of nature. The goal of the SSC project is to create a scientific laboratory in high energy physics whose facilities are unique. Ultimately the success of that laboratory will be measured by its scientific discoveries, measurements, interpretations, and innovations. Toward that end the accelerator-collider must be constructed to high standards at minimum cost and maximum effectiveness. Preparations must be made for future operations and a scientific-technical staff attracted and maintained. The chosen site must accommodate all of these factors. This document summarizes siting criteria for the SSC and enumerates site-specific information important to the evaluation of potential sites. This document is not a call for site proposals but a technical report prepared for the information and use of the Department of Energy (DOE). DOE

SUPERCONDUCTING MATERIALS FOR THE SSC
R. Scanlan, J. Royet, and C. E. Taylor Aug. 1985 13 p Presented at the Cryogenic Engineering Conference and International Cryogenic Materials Conference, Boston, Mass., 12 Aug. 1985
(Contract DE-AC03-76SF-00098)
(DE86-000618; LBL-19394; CONF-850814-25) Avail: NTIS HC A02/MF A01

The proposed Superconducting Supercollider presents several new challenges with regard to materials for dipole magnets. One design requires a NbTi superconductor with J sub c (5T) greater than 2400 A/mm(2), whereas the Tevatron recently completed at Fermilab required a J sub c (5T) greater than or equal to 1800 A/mm(2). In addition, the high field design requires a conductor with a filament diameter of about 2.5 (MU)m, if correction coils are to be eliminated. Finally, the high field design utilizes a 30-strand cable which again is a significant increase from the 23-strand cable used in the Tevatron. This paper describes the results of recent R and D programs aimed at meeting the stringent material requirements for the SSC. DOE

STUDIES OF STRUCTURE AND TRANSPORT IN QUASI-ONE DIMENSIONAL CONDUCTORS Ph.D. Thesis
Ki-Bong Lee 1985 180 p
Avail: Univ. Microfilms Order No. DA8515402

The structures of quasi-one dimensional materials (TaSe4)2I and polythiophene, and the electronic properties of Hg3-delta AsF6 were studied experimentally by X-ray diffraction and by the low field magnetoresistance and Hall effect measurements, respectively. From an extensive X-ray diffraction study of the charge density wave (CDW) phase in (TaSe4)2I, the superstructure satellites at 2q in addition to the reported satellites at q = + or - 0.05, + or - 0.05, + or - 0.085 were observed. The results imply that the CDW lattice modulation with polarization almost perpendicular to q and they demonstrate the existence of CDW domains. The crystallinity and crystal structure of chemically coupled polythiophene was investigated by X-ray scattering measurements. Heat treatment at elevated temperatures leads to significant increases in crystallinity and coherence length, indicative of chain growth. The cylindrical Fermi surface of Hg3-delta AsF6 which results from perpendicular sets of weakly coupled one dimensional chains, is found both experimentally and theoretically to lead to a strong enhancement of the low field magnetoresistance, and to a logarithmic dependence on the magnetic field. Dissert. Abstr.

We discuss the lattice dynamics of argon, krypton and xenon overlayers on the Ag(111) surface. We consider monolayer, bilayer, trilayer, and twenty-five layer films of each of these adsorbates. Data are also presented on the dispersion relation of selected branches of the phonon spectra of these overlayers. The data have been obtained by the method of angle-resolved inelastic He scattering. Several models of the lattice dynamics are compared with the data. It is concluded that the gas phase potentials proposed by Barker and co-workers prove suitable for a description of lateral interactions between the adsorbates, within the accuracy of the available data, provided that the phonon spectra are calculate for a lattice with the experimentally determined lattice constants. INVESTIGATION OF THE SPATIALLY ANISOTROPIC COMPONENT OF THE LATERALLY AVERAGED MOLECULAR HYDROGEN/AG(111) PHYSISORPTION POTENTIAL Interim Technical Report
K. B. Whaley, C. F. Yu, C. S. Hogg, J. C. Light, and S. J. Sibener Aug. 1985 93 p
(Contract N00014-77-C-0240)
(AD-A159726; TR-7) Avail: NTIS HC A05/MF A01 CSCL 20/10

A detailed investigation of the spatially anisotropic component of the laterally averaged molecular hydrogen/Ag(111) physisorption potential is presented. Experimentally derived rotationally inelastic transition probabilities for H2, D2, and HD, taken as a function of collision energy, are compared with those resulting from close-coupled quantum scattering calculations. These calculations utilize exponential-3 and variable exponent parameterizations of the laterally averaged isotropic potential which reproduce the experimental bound state resonance spectra for p-H2 and o-D2 on Ag(111). Complementary information is obtained by analyzing the magnetic sub-level splittings for physisorbed J = 1 n-H2, using diffractive selective adsorption resonance energies calculated with first order perturbation theory. Theoretical predictions for HD/Ag (111) rotationally mediated selective adsorption resonances are also compared with previously reported experimental results, which show well resolved J-dependent energy shifts resulting in part from the orientational anisotropy of the potential. The results obtained in this study indicate that both the attractive and repulsive parts of the anisotropic potential exhibit only a weak orientation dependence, in agreement with recent theoretical predictions for this system. DETERMINATION OF THE SURFACE PHONON DISPERSION RELATIONS FOR MONOLAYER, BILAYER, TRILAYER AND THICK Kr(111) FILMS PHYSISORBED ON Ag(111) BY INELASTIC He SCATTERING Interim Technical Report
K. D. Gibson and S. J. Sibener Aug. 1985 17 p
(Contract N00014-77-C-0240)
(AD-A159761; TR-8) Avail: NTIS HC A02/MF A01 CSCL 20/12

Angle and velocity resolved inelastic He scattering has been used to study how the surface dynamics of thin rare gas films evolve on a layer-by-layer basis. Surface phonon dispersion relations for ordered 1,2,3 and 25 layer Kr films physisorbed on Ag(111) are presented along TM across the entire Brillouin zone. The monolayer data are dispersionless, indicative of an Einstein oscillator mode. In comparison, the 25 layer film has a well developed Rayleigh wave, typical of a thick crystal surface. Excitation linewidths for monolayer Kr, which vary across the zone, are also briefly discussed. GRA

Calculations of the effect of bulk traps on the time dependence of the channel current in InP accumulation-type MISFET's are reported. It is shown that a uniform density of deep acceptors in the bulk material given rise to a decay in the channel current which decays approximately linearly as a function of the logarithm of time. If capture of the electrons is assumed to occur by a nonradiative multiphonon emission procession, then the temperature dependence that is obtained agrees with experimental results. The energy level and the density of the deep acceptor Fe (1+) trap involved in space-charge-limited current (SCLC) flowing in semi-insulating (SI) InP was deduced from I-V measurements and a model employing either the low-field Hall mobility or the high-field saturated electron velocity v subscipt s. The modified model based on v subscript s, yields the Fe3(+) energy level, D sub 1 = 0.6eV, and the trap density N sub t = 3 X 10 to the 15th power/cc, consistent with data obtained by other means. The influence of strong multiple interplanar forces is shown to give rise to a new class of surface vibrational resonances on metal surfaces as a result of higher harmonic terms in the bulk phonon dispersion relations. This effect is illustrated with the bcc F3(111) surface where a surface resonance is observed at 21 meV by high resolution electron energy loss specatroscopy, in excellent agreement with predictions by surface lattice dynamics calculations. HELIUM SCATTERING STUDIES OF THE SURFACE STRUCTURE AND DYNAMICS OF RARE GAS CRYSTALS
K. D. Gibson and S. J. Sibener Aug. 1985 34 p
(Contract N00014-77-C-0240)
(AD-A159942; TR-10) Avail: NTIS HC A03/MF A01 CSCL 20/12

This report reviews experiments involving He scattering from the surfaces of ordered rare gas overlayers physisorbed on Ag(111). The series of rare gases studied were Ar, Kr, and Xe. The measurements were performed on thin film structures which were grown on a layer-by-layer basis, from monolayer to thick film, in order to study how the surface properties changed with increasing distance from the substrate. Three types of experiments are discussed; elastic diffraction, selective adsorption, and inelastic single phonon scattering by angle-resolved time-of-flight. These experiments, taken together, provide a broad overview of the static and dynamic surface properties of rare gas overlayers. They also provide information about the forces which govern the adatom-adatom and adatom-substrate interactions. GRA

EFFECTS OF CRYSTALLITE ORIENTATION ON THE OXIDATION OF MoS2 THIN FILMS
P. D. Fleischauer and T. B. Stewart 9 Sep. 1985 26 p

(Contract F04701-83-C-0084)
(AD-A160617; TR-0084A(5945-03)-2; SD-TR-85-63) Avail: NTIS HC A03/MF A01 CSCL 07/4

Thin films of MoS2 have been prepared, by RF sputter deposition, with different microstructures that show markedly different susceptibilities to oxidation or other environmental degradation. The films were exposed to air atmospheres of variable relative humidity, and the extent of oxidation was measured by means of Auger electron (AES) and X-ray photoelectron (XPS) spectroscopies. The morphologies of the films were determined by transmission electron microscopy. Depths of oxidation of the thin films were calculated from changes in AES peak-to-peak height ratios and in XPS peak intensity ratios through the use of standard escape-depth models for attenuation of electron emission by a layer of reacted material (in the present case, MoO3). The results show that MoS2 films whose crystallites are oriented with their basal planes at random angles to the plane of the substrate surface (designated Type I films) are oxidized to depths equal to or greater than 300 A, whereas films whose crystallite basal planes are coplanar with (parallel to) the substrate surface (Type II films) are oxidized to a maximum depth of 10 to 15 A. These results are interpreted in terms of relative reactivities of edge versus basal planes of the MoS2 crystallites. GRA

SELF-CONSISTENT ELECTRONIC STRUCTURE OF ALPHA-PHASE HUME ROTHERY ELECTRON COMPOUND ALLOYS Cu SUB c Zn SUB1-c, Cu SUB cGa SUB1-c, AND Cu SUB c Ge SUB1-c
G. M. Stocks, A. M. Boring (Los Alamos National Lab., N. Mex.), D. M. Nicholson (Tennessee Univ., Knoxville), F. J. Pinski (Cincinnati Univ., Ohio), D. D. Johnson (Cincinnati Univ., Ohio), J. S. Faulkner, and G. L. Gyorffy (Bristol Univ., England) 1985 22 p Submitted for publication
(Contract W-7405-eng-36)
(DE85-017560; LA-UR-85-2861) Avail: NTIS HC A02/MF A01

We have performed charge self-consistent electronic structure calculations for the a-phae Hume-Rothery electron compound alloys Cu sub c Zn sub 1-c, Cu sub c Ga sub 1-c, and Cu sub c Ge sub 1-c having electron to atom ratios 1:1, 1:2, and 1:3 for each alloy series. The calculations are based on the self-consistent-field Korringa-Kohn-Rostoker coherent-potential approximation (KKR-CPA). We show results for the densities of states and Fermi surface of these alloys; the behavior of these quantities is quite different from that predicted on the basis of the rigid band model. we also show results for the ground state properties of Cu sub c Zn sub 1-c alloys that were obtained on the basis of a recent generalization of the density functional theory to random alloys. The theory provides a basis for understanding the concentration variation of the lattice parameter (Vegards' Law) Cu sub c Zn sub 1-c alloys at the microscopic quantum mechanical level. DOE

NEUTRON DIFFRACTION METHODS FOR THE STUDY OF RESIDUAL STRESS FIELDS
A. J. Allen, M. T. Hutchings, C. G. Windsor, and C. Andreani (II Universita Degli Studi di Roma, Italy) Jun. 1985 63 p
(AERE-R-11630) Avail: NTIS HC A04/MF A01

A technique is described for the measurement of the residual stress tensor averaged over a specified volume within a component. The method involves measurement of the small shifts of the lattice spacing using high resolution neutron diffraction. The stress is inferred from these measurements of the strain, and the theory of the relationship between the two quantities is described including the effects of crystalline anisotropy. The various types of high resolution neutron diffractometer suitable for the work are de-

scribed. Experimental results validating the method are given for a simple bent bar of mild steel of known strain, a plastically strained mild steel bar, and a mild steel tube of known torsional strain. Examples of the method in practical use are given by a cracked fatigue test specimen, a double V test weld and a weld joining a tube to a plate. A more detailed discussion appropriate to the anisotropic response of a polycrystalline sample under elastic and plastic strain is illustrated by measurements on many different Bragg reflections from a plastically strained mild steel bar. QUANTUM THEORY OF MULTIWAVE MIXING Ph.D. Thesis
David Allen Holm 1985 197 p
Avail: Univ. Microfilms Order No. DA8517498

A theory describing how one or two strong classical waves and one or two weak quantum mechanical waves interact in a two-level medium is formulated and applied. The theory unifies many topics in quantum optics, such as resonance fluorescence, saturation spectroscopy, modulation spectroscopy, the build up of laser and optical bistability instabilities, and phase conjugation. The theory is based on a quantum population pulsation approach that resembles the semiclassical theories, but is substantially more detailed. Calculations are performed to include the effects of inhomogeneous broadening, spatial hole burning, and Gaussian transverse radiations. The resonance fluorescence spectrum in a high fitness optical cavity is analyzed in detail, demonstrating how stimulated emission and multiwave processes alter the spectrum from the usual three peaks. The effects of quantum noise during the propagation of weak signal and conjugate fields in phase conjugation and modulation spectroscopy are studied. Analysis demonstrates that quantum noise affects not only the intensities of the signal and conjugate, but also their relative phase, and in particular a quantum limit to the semiclassical theory of FM modulation spectroscopy. The corresponding theory for the two-photon, two-level medium is also derived. This yields the first calculation of the two-photon resonance fluorescence spectrum. Because of the greater number of possible interactions in the two-photon two-level model, the theoretical formalism is considerably more complex, and many effects arise that are absent in the one-photon problem. Dissert. Abstr.

THE PHI 2 TO THE 4TH POWER EQUATIONS OF MOTION. PART 1: SIGN AND SPLITTING PROPERTIES. DEFINITION OF PHI LAMBDA-SUBSETS
Marietta Manolessou Jun. 1985 75 p refs
(Rept-52-A-Pt-1) Avail: NTIS HC A04/MF A01

The equations of motion for the polynomial interactions of degree 4 in two-dimensional space are considered. The fact the equations of motion for the completely amputated connected Green's functions (Schewing functions) for two dimensional momento space have a nontrivial solution is proved. Fixed point method is used. The precise relation of perturbative series with Phi-iteration is not studied. There is no contradiction between the divergence of perturbative series and the convergence of Phi-iteration. Author (ESA)

The overall goal of this project was to develop computer-ased learning strategy training modules designed to facilitate the cquisition and application of technical information. These modules ombine the strengths of two promising instructional techniques: omputer-assisted instruction and cooperative learning (peer utoring). Over the course of this project we have developed and ormally evaluated three modules designed to improve cognitive trategies during text processing: Summarization (paraphrase/ nagery), Structured Summarization (DICEOX), and Networking. We ave also developed and informally evaluated a module designed o improve affective strategies. The results of these evaluations ndicate that this training approach is effective for simple and omewhat familiar strategies (i.e., paraphrase/imagery). Suggesions are provided for improving the effectiveness of this training y extending training time and integrating the modules. The icrocomputer provides strategy instructions, and provides expert ontent and process feedback and reinforcement to the learner. GRA

STRUCTURED EXIT INTERVIEWS USING MDS (MULTIDIMENSIONAL SCALING)
R. R. Read Sep. 1985 46 p
(AD-A160469; NPS55-85-024) Avail: NTIS HC A03/MF A01 CSCL 09/2

The main purpose of this report is to introduce the technique of MDS (Multidimensional Scaling) as a tool for organizing, enhancing, and structuring information that may be obtained from students during their exit interviews. More specifically the report is concerned with the question of measuring and summarizing the student's perception of the instructional treatment they received while at NPS. The administration is obliged to monitor this process and MDS offers a dynamic and yet structured way to manage this problem. Moreover, it will be seen that the technique is a subtle one which allows the discovery of new factors that influence the perception process. It has the potential of providing a way to separate unwanted effects. Recent advances in computer input technology make feasible the data collection component that is inherent in the application of the MDS technique. The student may link to a user friendly computer program which will request information of the proper kind. Responses are input by moving the cursor to the proper position and striking an appropriate key. (The use of a touchscreen or a mouse would be even better.) When finished, the respondent can send his input to a central file where it is merged with input from other sources and processed. The use of the console for the administration of a questionnaire allows much information to be gathered in a reasonably short period of time. The type of information requested and the way it is analyzed are the main issues treated herein. GRA

A generalization is a working hypothesis, typically expressed in the form of cause-effect relations. In the social sciences, generalizations decay because: (1) it is difficult to identify appropriate cause-effect relations, and (2) such relations are sensitive to the influences of environmental conditions. Whereas scientists should be realistic in their aspirations to create generalizable knowledge, much can be done to improve performance through the use of formal models and experimentation. It is particularly important that theories permit comparisons between models and data at multiple levels involving processes, environmental conditions, and predictions. Scientists should avoid and the extremes of models without data and data without models. Instead, models would be subjected to strong empirical tests via predictions (rather than tests of statistical significance), and the competing predictions of alternatives. In addition to suggesting what experimental evidence should be collected, models also serve the important function of determining when data collection would be of little value. The nature of experimental evidence is considered from three viewpoints: (1) asymmetries in the way data and models interact in affecting conclusions; (2) apparent but illusory conflicts between the goals of internal and external validity; and (3) the importance of conducting experiments despite poor prospects of creating knowledge that can be generalized. Computer programs have been implemented for the Health, Safety, Environment, and Accountability Division at the Y-12 Plant to assist managers in tracking project milestones and reporting progress on environmental activities throughout the facility. By invoking external graphics software routines within FORTRAN programs, users can generate schedule milestone charts which use information retrieved from databases. In addition to its graphics capabilities, this database management system provides many reports which identify those milestones due for completion within a specific time period; these can be broken down further by the responsible project manager or government agency. The increasing use of such integrated systems can be seen as further evidence of the efficacy of the computer as a management tool DOE

ESTABLISHING A SUCCESSFUL MANAGEMENT INFORMATION SYSTEM FOR PROJECT MANAGEMENT
D. M. Johnston 1985 8 p Presented at the Project Management Institute Seminar, Denver, Colo., 7 Oct. 1985
(Contract DE-AC04-76DP-00789)
(DE85-018543; SAND-84-2401C; CONF-8510154-2) Avail: NTIS HC A02/MF A01

This paper presents the process we followed to achieve a successful management information system. Like many other organizations who decide to utilize a computer system to provide usable management information to aid in decision making, we found ourselves instead entangled in myriad of data items and details and complex and convoluted software programs, but no achievement of any management information, i.e., that which could be applied to aid in decision making. Since I have observed that this condition occurs in many organizations, our experience may provide insight to others struggling with nonexistent or cumbersome management information systems and guide them in the formulation of an effective MIS. DOE

A MECHANISM FOR NATURAL LANGUAGE DATABASE Ph.D. Thesis
Richard Allen Feinauer 1985 367 p
Avail: Univ. Microfilms Order No. DA8518098

The purpose of this dissertation is to investigate the capabilities of a transportable natural language database query methodology that has only a surface level understanding of the user's query and uses a relational logical schema as the basis of its world model. A secondary goal of this dissertation is to explore the usefulness of explicit optimization techniques in a natural language database query methodology. The basic features of the methodology described in this dissertation and implemented in a test system called DRIVER are an Analyzer that converts the user's query into a relational algebra statement and an Evaluator which converts the relational algebra statement into the data manipulation language of the target database management system and presents the answer to the user. The Analyzer contains five components. They are: a Word Role Identifier, a Phase Segmenter, a Phrase Analyzer, a Query Generator, and a User Dialog. Each component transforms the query into a form which is closer to the relational algebra statement than its input. The Analyzer has four external sources of information. They are: a query grammar, a world model, a query complexity measure, and the user. Dissert. Abstr.

ENTITY-BASED DATA BASE MANAGEMENT SYSTEMS Ph.D. Thesis
Robert Pershing Brazile 1985 103 p
Avail: Univ. Microfilms Order No. DA8516506

A data base management system (DBMS) which supports one of the three popular data models (hierarchical, network and relational) uses a record-based technique for implementing a data base design. This is advantageous when the data being stored is homogeneous, but the technique is not as well suited towards implementing data bases with particularly diverse properties and data types. An alternative technique, the entity-based technique, is presented which allows the design of the data base to be described and implemented as entities and relationships. The advantages of defining and maintaining the conceptual view of the data base with entities and relationships are discussed and examples are given to illustrate these advantages. A system to support the entity-based design technique can be implemented in two ways: (1) write an interface to an existing data base management system; (2) implement a data base management system explicitly for the entity-based technique. A set of primitive binary relations is presented which will support the concept of entity-based design. Dissert. Abstr.

A COMPARISON OF MULTI-KEY FILE STRUCTURES AND ASSOCITIVE RETRIEVAL ALGORITHMS FOR DATABASE APPLICATIONS Ph.D. Thesis
Dennis Albert Beckley 1985 181 p
Avail: Univ. Microfilms Order No. DA8517569

The advent of many applications requiring associative retrieval poses serious problems for a database designer trying to choose an appropriate multikey file structure for the multikey retrieval algorithms. This thesis attempts to supply the database designers with experimental observations for some of the best-known multikey structures: inverted lists, quad-trees, and K-d trees. A methodology for file structure comparison with experimentation is also provided. A series of experiments compare the retrieval performance of these structures with each other as well as with flat files for five query classes: exact match, partial match, range search, nearest neighbor, and best match. Algorithms for all of these query classes are given for each file structure; when not available in the literature, they were created. The experiments were run on a large commercial IBM mainframe using a database of half a million characters, the Michael Reese Hospital Stroke Registry. The strategy for the file structure comparison requires query class usage statistics and relative metric weights from the data base designer. Dissert. Abstr.

DEFENSE TECHNICAL INFORMATION CENTER CATALOGING GUIDELINES
G. B. Martens Oct. 1985 102 p Previously announced as N84-22503
(AD-A160100; DTIC/TR-85/10; DTIC/TR-84/1 dated Jan 84) Avail: NTIS HC A06/MF A01 CSCL 05/2

The guidelines for descriptive cataloging is a procedure manual published by the Defense Technical Information Center. It outlines the cataloging information to be included in the data fields for computer input of technical documents. The text is arranged numerically, by field number, and includes Appendices A through I. Changes to the security classification fields have been added to implement DoD 5200.1-R, Information Security Program Regulation. The rules and procedures in these guidelines are an adaptation of Guidelines for Descriptive Cataloging of Government Scientific and Technical Reports, published March 1978, as AD-A050 900. GRA

GUIDELINES FOR DESCRIPTIVE CATALOGING OF REPORTS: A REVISION OF COSATI STANDARD FOR DESCRIPTIVE CATALOGING OF GOVERNMENT SCIENTIFIC AND TECHNICAL REPORTS
1985 101 p Revised
(AD-A160409; AD-F250248) Avail: NTIS HC A06/MF A01 CSCL 05/2

Revised COSATI guidelines developed to maximize standardization of descriptive cataloging entries are defined. The rules presented govern the form of the essential cataloging elements for reports processed by the major federal information processing agencies: U.S. Department of Commerce, U.S. Department of Energy, National Aeronautics and Space Adminstration, and U.S. Department of Defense. The elements are: accession number, organization name, organizational code, title (unclassified), subtitle or descriptive note, personal author, publication date, pagination (for printed documents), funding number, report number, availability, supplementary note, and security classification. Additional elements

of information and retrieval such as subject fields and groups, descriptors/subject terms, and abstract are also included within the scope of this standard. The guidelines are intended to provide users with a form of citation and index entries consistent within the products of the various information systems, and to facilitate the exchange of bibliographic information among the federal information processing agencies in the technical report literature field without costly duplicative effort, especially for machine-readable media. INTERNATIONAL ENERGY R AND D REPRESENTED IN THE ENERGY DATA BASE, 1984
C. E. Stuber, ed. Oct. 1985 29 p
(DE85-016029; DOE/TIC-11624) Avail: NTIS HC A03/MF A01

One of the goals of the OSTI international information program is to maximize the availability and usage of foreign scientific and technical information within the DOE and its contractor organizations. This publication provides an outline of the OSTI international program, with emphasis on activities in 1984. In addition, the international energy R and D information acquired through this program in 1984 and available for access via the Energy Data Base (EDB) is analyzed by country of publication, type of literature, and subject matter. The basis for this analysis is country of publication because country of publication determines coverage responsibility for the exchange agreements included in the OSTI international program. Of course, the specific research facility and country where the research was performed are also included in each research summary exchanged, and these data elements are available for interrogation and analysis in EDB. TEXT COMPRESSION USING WORD TOKENIZATION
G. Long, I. Morrison, and D. Barnett 11 Sep. 1985 21 p
(Contract W-7405-eng-48)
(DE86-000832; UCID-20526) Avail: NTIS HC A02/MF A01

This document describes a text compression scheme, its associated algorithms, and their implementation in the C programming language. The algorithms described only work for textural data. The current code and associated data dictionary are slanted toward general English language text such as technical reports and/or newspaper articles. With minor modifications to the code and by using special purpose dictionaries, the same algorithms could be used to compress special purpose text files such as compiler source listings. We achieve compression ratios of better than fifty percent and the routines are very fast. Typical applications produce significant reduction in data storage space and effectively double the transmission rate of documents between computers. DOE

POLICY AND ORGANIZATIONAL CONSIDERATIONS FOR IMPROVING TRANSFER OF UNIVERSITY RESEARCH INFORMATION AND EFFECTING AVAILABILITY OF EXPERTISE TO STATE AGENCIES
G. R. Blake Jul. 1984 41 p
(Grant DI-14-08-0001-G-850)
(PB85-232932; USGS/G-850-22) Avail: NTIS HC A03/MF A01 CSCL 05A

The troubled state of financing of the Water Resources Research Center (WRRC) precipitated a review of the WRRC, its role, its relation to other water resources units or programs in the University, its administrative structure and its financing. An ad hoc committee appointed by the University Vice President reported back with its recommendations on the role of WRRC, in research, in coordination, and in communication and outreach. The ad hoc report was supportive of the need for strengthening and financially supporting an expanded role for RRC. The University administration sensing a need for developing a coordinated mission for Natural Resources on its various colleges and campuses took action to set up a structure for that purpose. This consisted of appointing an Executive Council, a technical advisory committee and four resources sub-committees of which the Water Resources Subcommittee was one. GRA

BASICS OF SEARCHING MEDLINE: A GUIDE FOR THE HEALTH PROFESSIONAL
Jul. 1985 206 p
(PB85-232650; NLM/MED-85/05) Avail: NTIS HC A10/MF A01 CSCL 06E

The Guide is designed to acquaint the health professional with the basic concepts and skills involved in using MEDLARS to retrieve information from its primary database, MEDLINE. It may be used in a formal training course or as a self-paced learning tool. After carefully reading the Guide and practicing searches on the special training database, INTROMED, the health professional will have enough knowledge to perform author searches as well as simple subject searches in MEDLINE. For more complicated searches, the health professional may wish to consult an experienced librarian or search analyst. GRA

INFORMATION TECHNOLOGIES AND SOCIAL TRANSFORMATION Final Report
B. R. Guile 1985 183 p
(PB85-240521; ISBN-0-309-03529-5; LC-85-4830) Avail: NTIS HC A09/MF A01 CSCL 05B

Information technologies are perhaps the most aggressive technologies of the current age, generating progress, change, and turbulence in many branches of industry and in the lives of organizations and individuals. The symposium that produced this volume brought scholars of technology and society together with technologists, social scientists, and representatives from the industrial, legal, and public sectors to discuss the interaction of information technology with social institutions. The topics addressed including a review of recent developments and likely futures in information technology, a comparison of information technology to historical developments in other technologies, and discussion of the interaction of information technology with businesses, homes, property rights in information, and various hierarchies of social organization. OVERVIEW OF FREE-PISTON STIRLING SP-100 ACTIVITIES AT THE NASA LEWIS RESEARCH CENTER
Jack G. Slaby [1986] 25 p refs Prepared for Presentation at the 3rd International Stirling Engine Conference, Rome, Italy, 23-27 Jun. 1986
(Contract DE-AI05-82OR-1005)
(NASA-TM-87224; E-2834; DOE/NASA/1005-8; NAS 1.15:87224) Avail: NTIS HC A02/MF A01 CSCL 10B

An overview of the National Aeronautics and Space Administration (NASA) Lewis Research Center (LeRC) SP-100 free-piston Stirling engine activities is presented. These activities are being conducted in support of the Department of Defense (DOD), Department of Energy (DOE), and NASA. The space-power technology effort, under SP-100, addresses the status of the 25 kWe Space Power Demonstrator Engine (SPDE). Another facet of the SP-100 project covers the status of an endurance test. Dynamic balancing of the SPDE engine is discussed along with a summary covering the parametric results of a study showing the relationship between power-converter specific weight and efficiency both as a function of Stirling engine heater to cooler temperature ratio. Design parameters and conceptual design features are presented for a 25 kWe, single-cylinder free-piston Stirling space-power converter. And finally, a description of a hydrodynamic gas bearing concept is presented. Author

STIRLING POWERED VAN PROGRAM OVERVIEW Final Report
Richard K. Shaltens 1986 16 p refs Presented at the International Congress and Exposition, Detroit, Mich., 24-28 Feb. 1986; sponsored by the Society of Automotive Engineers
(Contract DE-AI01-85CE-50112)
(NASA-TM-87227; DOE/NASA/50112-62; E-2896; NAS 1.15:87227) Avail: NTIS HC A02/MF A01 CSCL 13F

The Stirling Powered Van Program (SPVP) is a multilayer, multiphase program to evaluate the automotive Stirling engine (ASE) in Air Force vans under realistic conditions. The objective of the SPVP is to have a manufacturer and end user(s) (i.e., on the path to commercialization) of the second-generation Mod II ASE upon completion of the Automotive Stirling Engine Program in 1987. In order to meet this objective, the SPSV must establish Stirling performance, integrity, reliability, durability, and maintainability. This paper reviews the ASE Program background leading to the Van Program and focuses on plans for evaluating the kinematic Stirling engine in Air Force vans. Also discussed are the NASA technology transfer to industry that have been accomplished and those which are currently being developed. Author

INDIANAPOLIS TECHNICAL INNOVATION PROGRAM: PROGRAM RESULTS Final Report
E. W. Waltz Oct. 1984 42 p
Avail: NTIS HC A03/MF A01 CSCL 05A

A technical innovation program conducted by the City of Indianapolis to solve City operational programs, reduce costs, and improve service productivity is discussed. Program objectives are listed, and include: to execute all program activities within the regular decision-making and budgeting processes of the City government; and to subject the program plans, budget, and results to a review and evaluation by the City-County Council. During the first year of the program, a combustion engineering analysis of the City's waste sludge incinerator operations was performed; the analysis formed the technical basis for a pilot project to demonstrate how a new operating technology could reduce fuel consumption and improve the incinerator's efficiency. Indianapolis achieved a fuel savings of about $800,000 per year, and also significantly reduced particulate emissions. Author (GRA)

PLANETARY IMAGE CONVERSION TASK Final Report
Michael D. Martin, Carol L. Stanley, and Gaylin Laughlin 15 Sep. 1985 219 p refs
(Contract NAS7-918)
(NASA-CR-176534; JPL-Pub-85-50; NAS 1.26:176534) Avail: NTIS HC A10/MF A01 CSCL 03B

The Planetary Image Conversion Task group processed 12,500 magnetic tapes containing raw imaging data from JPL planetary missions and produced an image data base in consistent format on 1200 fully packed 6250-bpi tapes. The output tapes will remain at JPL. A copy of the entire tape set was delivered to US Geological Survey, Flagstaff, Ariz. A secondary task converted computer datalogs, which had been stored in project specific MARK IV File Management System data types and structures, to flat-file, text format that is processable on any modern computer system. The conversion processing took place at JPL's Image Processing Laboratory on an IBM 370-158 with existing software modified slightly to meet the needs of the conversion task. More than 99% of the original digital image data was successfully recovered by the conversion task. However, processing data tapes recorded before 1975 was destructive. This discovery is of critical importance to facilities responsible for maintaining digital archives since normal periodic random sampling techniques would be unlikely to detect this phenomenon, and entire data sets could be wiped out in the act of generating seemingly positive sampling results. Reccomended follow-on activities are also included. Author

(NASA-CR-178612; NAS 1.26:178612) Avail: NTIS
HC A02/MF A01 CSCL 03A

A Star Field Simulator has been developed to serve as a source of radiation for the ASTRO Star Tracker. The star tracker and simulator are components of a motion compensation test facility located at Marshall Space Flight Center in Huntsville, Alabama. Preflight tests and simulations using various levels of guide stars are performed in the test facility to establish performance of the motion compensation system before being used in a flight environment. The ASTRO Star Tracker operates over a wide dynamic range of irradiance corresponding to visual stellar magnitudes of -0.8 to 8. A minimum of three simulated guide stars with variable magnitudes are needed to fully test the Star Tracker performance under simulated mission conditions. Author

THE ABSOLUTE FLUXES OF SIX HOT STARS IN THE ULTRVIOLET (912 - 1600 ANGSTROMS) Ph.D. Thesis
Thomas Nee Woods 1985 119 p
Avail: Univ. Microfilms Order No. DA8518544

Six hot stars were observed on 1984 March 2 from a Black Brant V sounding rocket. The absolute fluxes from gamma sup 2 Vel, zeta Pup, alpha CMa gamma Ori, beta Tau, and epsilon Per were measured in the spectral region between 912 A and 1600 A at 10 A resolution. Comparisons with revised Voyager 1 and Voyager 2 Ultraviolet Spectrometer data (Holberg 1984) and previous sounding rocket data (Brune et al. 1979) are evaluated. In general, the two sounding rocket experiments are in good agreement, and the revised Voyager data and the sounding rocket data are in agreement except at wavelengths below 1000 A. Comparisons with stellar models (Kurucz 1979) are presented showing discrepancies near 1200 A and below 1000 A. Determination of interstellar absorption using the data on these stars proved to be unsatisfactory due partly to the inaccuracies of the stellar models; however, a list of hot stars suitable for deriving the interstellar extinction is included to aid future extreme ultraviolet experiments, such as the Hopkins Ultraviolet Telescope (HUT). Dissert. Abstr.

SUPERMASSIVE STAR FORMATION: THE EARLY PHASES Ph.D. Thesis
Michael Preston Merilan 1985 219 p
Avail: Univ. Microfilms Order No. DA8518990

The evolution of nonrotating, nonmagnetic, dust-free supermassive protostellar clouds is examined with emphasis on the potential for formation of supermassive objects. The inhibiting roles of turbulence induced fragmentation, radiation pressure, radiative heating, and HLL region formation are also considered. A hybrid Eulerian scheme is applied to solve the classical and post-Newtonian coupled partial differential equations of hydrodynamics in conservation form. Radiative transfer and shocks are treated by the diffusion approximation and artificial viscosity. Cloud model parameters are chosen to satisfy the Jeans criterion. Compared to conventional mass clouds, the supermassive clouds (with initially constant temperatures and densities) are strongly gravitationally dominated relative to their thermal energy content. A highly nonhomologous, supersonic collapse results which parallels the early evolution of low mass protostellar clouds. Author

COMPACT CONFIGURATIONS WITHIN SMALL EVOLVING GROUPS OF GALAXIES Ph.D. Thesis
Gary Allan Mamon 1985 287 p
Avail: Univ. Microfilms Order No. DA8518639

Small virialized groups of galaxies are evolved with a gravitational N-body code, where the galaxies and a diffuse background are treated as single particles, but with mass and luminosity profiles attached, which enbles the estimation of parameters such as internal energies, half-mass radii, and the softened potential energies of interaction. The numerical treatment includes mergers, collisional stripping, tidal limitation by the mean-field of the background (evaluated using a combination of instantaneous and impulsive formulations), galaxy heating from collisons, and background heating from dynamical friction. The groups start out either as dense as appear the groups in Hickson's (1982) catalog, or as loose as appear those in Turner and Gott's (1976a) catalog, and they are simulated many times (usually 20) with different initial positions and velocities. Dense groups of galaxies with massive dark haloes coalesce into a single galaxy and lose their compact group appearance in approximately 3 group half-mass crossing times, while dense groups of galaxies without massive haloes survive themerger instability for 15 half-mass crossing times (in a more massive background to keep the same total group mass). CORRELATION ANALYSIS OF THE TAURUS MOLECULAR CLOUD COMPLEX Ph.D. Thesis
Steven Carl Kleiner 1985 261 p
Avail: Univ. Microfilms Order No. DA8517120

Autocorrelation and power spectrum methods have been applied to the analysis of the density and velocity structure of the Taurus Complex and Heiles Cloud 2 as traced out by C-130 J = 1 yields 0 molecular line observations obtained with the 14m antenna of the Five College Radio Astronomy Observatory. Statistically significant correlations in the spacing of density fluctuations within the Taurus Complex and Heiles 2 were uncovered. The length scales of the observed correlations correspond in magnitude to the Jeans wavelengths characterizing gravitational instabilities within (1) interstellar atomic hydrogen gas for the case of the Taurus complex, and (2) molecular hydrogen for Heiles 2. The observed correlations may be the signatures of past and current gravitational instabilities frozen into the structure of the molecular gas. A velocity gradient of 0.25 km/s is detected across the core of the Complex, which as a whole appears to be in virial equilibriu. Autocorrelation analysis of the remaining, non-systematic, gas motions sets an upper limit of 0.6 pc to the correlation length of turbulence within the Taurus Complex. This limit is shown to be inconsistent with suggestions that a lossless cascade (i.e., a Kolmogorov spectrum) of turbulent motions pervades the dense interstellar medium. Author

THE CYGNUS LOOP SUPERNOVA REMNANT: NEW OBSERVA-

TIONS AND A FRAMEWORK FOR UNDERSTANDING ITS STRUCTURE AND EVOLUTION Ph.D. Thesis
John Jeffrey Hester 1985 275 p
Avail: Univ. Microfilms Order No. DA8517205

New observational data on the Cygnus Loop supernova remnant (SNR) include: (1) a detailed high resolution comparison of X-ray and optical emission for a field in the SE; (2) a map of the [O III] electron temperature; and (3) CCD imagery of the NE limb in the light of four emission lines. A wide range of new and existing observations of the Loop are for the first time interpreted ithin the context of a single physical description. The Cygnus Loop is not an evaporative SNR evolving into an ISM, nor are tiny cloudlets necessary to explain its morphology. The data show the Cygnus Loop to be evolving into a medium consisting primarily of an intercloud phase. Evaporation of clouds cannot account for the X-ray data. The brightest X-ray emission in the Loop comes just interior to young optical emission, and the gas has a pressure of at least six times the average for the Loop. The X-ray data can be explained within the context of the large cloud picture by the combined effects of (1) a denser than average intercloud medium nears clouds (2) inertial pressurization of the X-ray emitting shell behind rapidly decelerating portions of the blast wave and (3) strong compression of the hot gas by reflected and bow shocks around clouds. ELECTROCRYSTALLIZATION IN MICROGRAVITY
Charles E. May Jan. 1986 22 p refs
(NASA-TM-87202; E-2857; NAS 1.15:87202) Avail: NTIS HC A02/MF A01 CSCL 03B

Electrocrystallization under microgravity conditions is proposed as a potential method of crystallization that would be almost completely free of fluid convection. Such crystallization may result in purer, more perfect, and larger crystals than is possible under normal gravity conditions. Observations made and data collected during the crystallization process under convection-free conditions should add to our knowledge of the crystallization process. The proposed method would allow easy comparison of crystals growth in space with those grown under normal gravity conditions. Nine types of electrocrystallization are presented: an example of each is discussed. Electrocrystallization is compared with the compartmental crystallization method used by 3M Corporation in recent shuttle experiments. Author

CONTRIBUTIONS TO PROCEEDINGS FROM THE NATO ADVANCED RESEARCH WORKSHOP ON THE SEISMOLOGY OF THE SUN AND THE DISTANT STARS
Sep. 1985 24 p refs
(Grant NGR-05-020-559; Contract N00014-76-C-0207; Grant NSF ATM-77-20580)
(NASA-CR-176470; NAS 1.26:176470; SU-CSSA-ASTRO-85-23)
Avail: NTIS HC A02/MF A01 CSCL 03B

Advanced research results on the seismology of the Sun and distant stars is presented. Topics presented include: (1) detection of global convective wave flows; (2) observation of low degree p-mode oscillations; and (3) techniques for spectral deconvolution. For individual titles, see N86-19276 through N86-19278.

THE DETECTION OF GLOBAL CONVECTIVE WAVE FLOWS ON THE SUN
Philip H. Scherrer, Richard Bogart, J. Todd Hoeksema, and Hirokazu Yoshimura (Tokyo Univ., Japan) *In its* Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars Sep. 1985 p 1-10 refs (For primary document see N86-19275 09-92)
Avail: NTIS HC A02/MF A01 CSCL 03B

Global convective flows in the solar convection zone have been predicted by theoretical interpretations of the global-scale ordering of magnetic fields and activity centers and by theoretical analyses of rotating convection zones. Direct evidence of these flows in the photosphere has not previously been found despite

several long-term efforts. The signatures of such flows have now been detected by analyzing the daily series of low-resolution Dopplergrams obtained at the Wilcox Solar Observatory at Stanford University. The signatures are patterns of alternating east and west flows with amplitudes on the order of 25 m/s and longitudinal extent of about 30 degrees. The patterns move across the disc at approximately the solar rotation rate and have lifetimes of at least several rotations. Boundaries of the fast and slow flows are often associated with large magnetic active regions. Author

OBSERVATIONS OF LOW-DEGREE P-MODE OSCILLATIONS IN 1984
Harald M. Henning and Philip H. Scherrer *In its* Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars Sep. 1985 p 11-18 refs (For primary document see N86-19275 09-92)
Avail: NTIS HC A02/MF A01 CSCL 03B

Analysis of Stanford differential velocity observations has been extended through the 1984 observing season. Excellent quality observations were obtained in 1984 on 38 days in a 49 day interval from June 20th through August 7th. The power spectrum of this data has been examined and improved frequency determinations have been made for p-modes of degree 2 through 5 and order 5 through 34. Of special interest are the modes of the lower orders, n ranging from 5 to 10, which have not been identified previously. Author

COMMENTS ON TECHNIQUES FOR SPECTRAL DECONVOLUTION c90
Philip H. Scherrer *In its* Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars Sep. 1985 p 19-22 refs (For primary document see N86-19275 09-92)
Avail: NTIS HC A02/MF A01 CSCL 03B

Current observational questions in asteroseismology require high spectral resolution that can be only be obtained with observations spanning many days or months. The primary constraint in the full utilization of single mid-latitude observing sites is the presence of diurnal data gaps. Several methods for removing the effect of these gaps in the spectral obtained from velocity observations have been suggested. In the case of data coverage of less than 50%, none of the methods considered has been successful at unambiguously recovering the true spectrum from test spectra with realistic complexity. The limitations of these methods and their applicability to the helioseismology problem is discussed. Author

THE HARD X-RAY BURST SPECTROMETER EVENT LISTING, 1980 - 1985
Brian R. Dennis, Larry E. Orwig, Alan L. Kiplinger, Bernard R. Gibson, G. Shelby Kennard, and A. Kimberley Tolbert 1985 146 p
(NASA-TM-86236; Rept-86B0023; NAS 1.15:86236) Avail: NTIS HC A07/MF A01 CSCL 03B

This event listing is a comprehensive reference for the hard X-ray bursts detected with the Hard X-Ray Burst Spectrometer on the Solar Maximum Mission from the time of launch on February 14, 1980 to September 1985. Over 8000 X-ray events were detected in the energy range from 30 to approx. 500 keV with the vast majority being solar flares. The listing includes the start time, peak time, duration and peak rate of each event. Author

RESEARCH AND TECHNOLOGY: 1985 ANNUAL REPORT OF THE LYNDON B. JOHNSON SPACE CENTER

Dec. 1985 78 p

(NASA-TM-58272; S-552; NAS 1.15:58272) Avail: NTIS HC A05/MF A01 CSCL 05A

Johnson Space Center accomplishments in new and advanced concepts during 1985 are highlighted. Included are research funded by the Office of Aeronautics and Space Technology; Solar System Exploration and Life Sciences research funded by the Office of Space Sciences and Applications; and Advanced Programs tasks funded by the Office of Space Flight. Summary sections describing the role of the Johnson Space Center in each program are followed by one-page descriptions of significant projects. Descriptions are suitable for external consumption, free of technical jargon, and illustrated to increase ease of comprehension. Author

SUBJECT INDEX

Typical Subject Index Listing

The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7051).

AEROSPACE SYSTEMS
Double wall artery heat pipe
[AD-A160012] N86-18671
Heat pipe space nuclear reactor design assessment. Volume 1: Design status of the SP-100 heat pipe space nuclear reactor system
[AD-A160279] N86-19164
AEROTHERMODYNAMICS
Analysis of heat-transfer measurements from two AEDC wind tunnels on the shuttle external tank
[AD-A160406] N86-18331
AGGLOMERATION
Test plan for high temperature/high pressure acoustic agglomerator
[DE85-017221] N86-18704
AGING (MATERIALS)
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548
AGING (METALLURGY)
Effect of prolonged high temperature aging on operating properties of 15Kh1M1F steel N86-18534
AGROMETEOROLOGY
Application of METEOSAT data for remote sensing of Earth resources: EARSeL Working Group 7 report --- agrometeorology in drought areas N86-18357
AIR
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
AIR BREATHING ENGINES
Aeronautical facilities catalogue. Volume 2: Airbreathing propulsion and flight simulators
[NASA-RP-1133] N86-18328
AIR CONDITIONING
TRASSA system introduction causes various problems
N86-18285
AIR CONDITIONING EQUIPMENT
Modular air shut-off valve
[AD-D011935] N86-18726
AIR FILTERS
Recirculating electric air filter
[DE85-017751] N86-18632
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737
AIR FLOW
Aerodynamic characteristics of an air-exchanger system for the 40- by 80-foot wind tunnel at Ames Research Center
[NASA-TM-88192] N86-18291
Modular air shut-off valve
[AD-D011935] N86-18726
Effects of inflow conditions on discrete frequency noise generated by small, axial flow fans
[AD-A160579] N86-19135
AIR LAUNCHING
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
AIR PURIFICATION
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737
AIR SAMPLING
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800
Development of a Room Air Monitor System and Workplace Transuranic Aerosol Measurement System
[DE86-001563] N86-18806
AIR TRAFFIC CONTROL
TRASSA system introduction causes various problems
N86-18285
Calibration of an on-ground aircraft tracking radar by aerial photogrammetry
[NAL-TR-861] N86-18311
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] N86-18981
AIR WATER INTERACTIONS
The ERS-1 observations of lakes for climate research
N86-18385
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86-18926
Navy tactical applications guide. Volume 5, part 2: Indian Ocean (Arabian Sea/Bay of Bengal) weather analysis and forecast applications
[AD-A160781] N86-18928
Laser Doppler wind profile measurements above sea level --- North Sea
[DFVLR-FB-85-48] N86-18934
AIRBORNE EQUIPMENT
Remote sensing of oil on sea: Lidar and passive IR experiments N86-18370
The VARAN-S: An airborne synthetic aperture radar for research in microwave remote sensing N86-18376
Joint agency turbulence experiment
[AD-A160420] N86-18924
AIRBORNE/SPACEBORNE COMPUTERS
Development and implementation of an MC68000/VME microcomputer for payload support systems
N86-18654
AIRCRAFT ACCIDENTS
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
Aircraft accident reports: Brief formats, US civil and foreign aviation, issue number 1 of 1984 accidents
[PB85-916920] N86-18309
Aircraft accident reports: Brief format US Civil and Foreign Aviation, issue 2 of 1984 accidents
[PB85-916921] N86-18310
AIRCRAFT COMMUNICATION
Effects of noise and workload on a communication task
[AD-A160743] N86-18599
AIRCRAFT COMPARTMENTS
Fire-retardant decorative inks for aircraft interiors
[NASA-TM-88198] N86-18441
AIRCRAFT CONFIGURATIONS
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
AIRCRAFT CONSTRUCTION MATERIALS
Sukhoy design bureau builds sport plane made of plastic N86-18324
AIRCRAFT DESIGN
Calculation of the external nacelle surface for single and double stream jet engines for civil aircraft
[VTH-M-445] N86-18301
Features of planned IL-96-300, IL-114 aircraft
N86-18325
An introduction to the application of Computer Aided Design (CAD) to the predesign of aircraft and the design of aircraft structures at the Aerospace Section
[VTH-M-512] N86-19045

AIRCRAFT DETECTION
Probabilistic evaluation of individual aircraft tracking techniques
[AD-A160146] N86-18312
AIRCRAFT ENGINES
Interactive effects of high- and low-frequency loading on fatigue
[AD-A160601] N86-18318
AIRCRAFT HAZARDS
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
Some microphysical processes affecting aircraft icing
[AD-A160375] N86-18921
Joint agency turbulence experiment
[AD-A160420] N86-18924
Calculation of ice accretion on cylindrical rods according to Bain's model, and comparison with experimental results -- stratus clouds
[DFVLR-FB-85-46] N86-18933
AIRCRAFT NOISE
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329
Effects of noise and workload on a communication task
[AD-A160743] N86-18599
Report of noise measurements with 2 different microphone dispositions on airplane type Cessna F 172L
[VTH-M-510] N86-19143
AIRCRAFT PARTS
Aviaremont's efforts to introduce laser technology N86-18286
AIRCRAFT RELIABILITY
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
AIRCRAFT SAFETY
Probabilistic evaluation of individual aircraft tracking techniques
[AD-A160146] N86-18312
Atmospheric electricity hazards threat environment definition
[AD-A159739] N86-18909
Microburst wind shear models from the Joint Airport Weather Studies (JAWS)
[AD-A159758] N86-18910
AIRCRAFT STRUCTURES
An introduction to the application of Computer Aided Design (CAD) to the predesign of aircraft and the design of aircraft structures at the Aerospace Section
[VTH-M-512] N86-19045
AIRFOIL PROFILES
Full pseudospectral solution to the Euler equations of motion for airfoil flow at transonic speeds
[AD-A159714] N86-18293
The conformal representation of the NACA 642A015 profile
[VTH-M-502] N86-18296
On the function e to the power sigma (theta) and the velocity distribution around Eppler profiles
[VTH-M-514] N86-18297
On the functions e to the power sigma (theta) and tau (theta) and the velocity distribution around Lighthill profiles
[VTH-M-520] N86-18300
On the interpolation method of Schoenberg and the calculation of profile coordinates
[VTH-M-452] N86-18302
On the longest chord of the first Muller profile
[VTH-M-486] N86-18303
AIRFOILS
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
Two-dimensional Helmholtz flow about a flat plate and related shapes
[AD-A160806] N86-18295
Dynamic characteristics of the 48-inch water tunnel drive pump
[AD-A159904] N86-18668
AIRFRAMES
Effectiveness of fatigue life enhancing fasteners in the design and rework of aircraft structures
[AD-A159676] N86-18316
AIRGLOW
Airglow O2(1 Sigma) atmospheric band at 8645 Angstrom and the rotational temperature observed at 23 deg S
[INPE-3831-PRE/811] N86-18809
AIRPORTS
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Catalog of air weather service technical documents
[AD-A159681] N86-18912
AIRSPEED
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
ALABAMA
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
ALFALFA
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18786
ALGEBRA
A survey of properties of relations which have the confluence property
[AD-A159673] N86-19012
ALGORITHMS
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314
Real time: Automatic vehicle potential determination from ESA measurements. Part 1. The count ratio algorithm
[AD-A160459] N86-18435
Speech recognition: Acoustic, phonetic and lexical
[AD-A160008] N86-18589
Minimizing the number of clusters in mobile packet radio networks
[AD-A160127] N86-18590
Reconstruction of multidimensional signals from zero crossings
[AD-A160062] N86-18615
Adapting a Navier-Stokes code to the ICL-DAP
[NASA-CR-178034] N86-18651
Lanczos algorithm applied to modal analysis of very large structures
[AD-A160210] N86-18733
Toward a surface sketch
[AD-A159693] N86-18767
Generation of vertically incident seismograms
[AD-A159695] N86-18876
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
Digital signal processing
[AD-A159889] N86-18994
Parallel direct methods for solving banded linear systems
[AD-A160148] N86-18995
Reduction of the effects of the communication delays in scientific algorithms on message passing MIMD architectures
[NASA-CR-178044] N86-19010
A survey of properties of relations which have the confluence property
[AD-A159673] N86-19012
A modified frontal technique suitable for parallel systems
[AD-A159789] N86-19014
Algorithmic study on systolic array structures
[AD-A160006] N86-19015
On using inverted trees for updating graph properties
[AD-A160135] N86-19019
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
Conflict sensitivity of algorithms. Part 1: A CRAY X-MP study
[AD-A160208] N86-19023
Foundations of knowledge for distributed systems
[AD-A160233] N86-19024
Parallel matrix computations
[AD-A160240] N86-19025
Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029
Fast Fourier Transform (FFT) subroutine for determining frequency response data for digital simulations
[AD-A160548] N86-19033
Scan line difference compression algorithm simulation study
[AD-A160646] N86-19036
Simulation and evaluation of the AT and T proposed pattern recognition algorithm for group 4 facsimile
[AD-A160864] N86-19037
The design and implementation of an operating system for the IBM personal computer
[AD-A160875] N86-19052
Distributed architecture and fast parallel algorithms in real-time robot control N86-19055
Adaptive decentralized control
[AD-A160187] N86-19058
Transformation of two and three-dimensional regions by elliptic systems
[NASA-CR-176476] N86-19063
A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068
On the maximum-weight clique problem
[AD-A159953] N86-19069
On structure determination for polynomial input-output differential systems
[AD-A160225] N86-19078
An adaptive filter finite element method for linear elliptic problems
[CTH-MATH-1985-13] N86-19092
An aggregation technique for the transient analysis of stiff Markov systems
[AD-A160286] N86-19112
Multiple beamforming
[AD-A159979] N86-19132
A comparison of multi-key file structures and associtive retrieval algorithms to database applications N86-19254
Text compression using word tokenization
[DE86-000832] N86-19260
ALIGNMENT
Analog inclination data system
[AD-D011940] N86-18686
Diagnostic apparatus and method for use in the alignment of one or more laser means onto a fiber optics interface
[DE85-017756] N86-18725
ALKALI METALS
Conductivity, DSC, FTIR, and NMR studies of Poly(vinyl acetate) complexed with alkali metal salts
[AD-A160450] N86-18467
Te2 chemiluminescence from alkali Atom-TeCl4 reactions
[AD-A160913] N86-18472
ALKALINE EARTH METALS
Surface characteristics and molar volume of FeCl2-MeCl (Me = Li, Na, K, Rb, Cs) systems
[BLLD-M-36470-(5828.4)] N86-18456
ALKENES
Synthesis of synthetic hydrocarbons via alpha olefins
[AD-A160386] N86-18446
ALLOYS
Treatment of metal powders in attrition machines
[BLL-M-36420-(5282.4F)] N86-18485
Method for making alloy additions to base metals having higher melting points
[AD-D011928] N86-18489
Corrosion resistant materials in MCFC environment
[DE85-017808] N86-18503
Electrical method of making conductive paths in silicon
[AD-D011945] N86-18610
Alloy development for irradiation performance
[DE85-018142] N86-19181
ALPHA PARTICLES
Development of a Room Air Monitor System and Workplace Transuranic Aerosol Measurement System
[DE86-001563] N86-18806
ALPS MOUNTAINS (EUROPE)
Long linear features observed on the Alpine orogen and their comparison with some geophysical data -- landsat satellites N86-18382
ALTERNATING CURRENT
Painting stainless steel with alternating current N86-18533
ALTIMETERS
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
ALUMINUM
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
Ultrapure aluminum N86-18525
Deformation of Al-Cu powder bodies during liquid-phase sintering N86-18518
Electrical method of making conductive paths in silicon
[AD-D011945] N86-18610

GaP/Al/sub x/Ga/sub 1-x/P heterojunction semiconductor controlled rectifier for high-temperature electronic applications
[DE86-000204] N86-18641
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182

ALUMINUM ALLOYS
Influence of stress concentration on fatigue and corrosion-fatigue properties of VAL10 aluminum casting alloy and AK6 aluminum forging alloy N86-18513
Influence of temperature on microplasticity and cyclical strength of 1201 alloy N86-18514
Increasing the corrosion resistance of welded joints in A85 aluminum N86-18523
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755
Welding procedure specification: Gas tungsten arc welding of aluminum alloys 1XXX and 3003
[DE86-001508] N86-18764

ALUMINUM CHLORIDES
MNDO calculations of ions in chloroaluminate molten salts
[AD-A160620] N86-18471
Thermal stability of certain hydrated phases in systems made using portland cement
[AD-A160443] N86-18553

ALUMINUM GALLIUM ARSENIDES
Zinc-diffused narrow stripe AlGaAs/GaAs double heterostructure laser
[AD-D011943] N86-18709

ALUMINUM OXIDES
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Degradation of beta" alumina electrolytes
[DE85-015300] N86-18636

ALVEOLI
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976

AMBIGUITY
Polychromatic time-integrating optical processor for high-speed ambiguity processing
[AD-D011942] N86-19190

AMINES
Preparation of P-N-H and p-p compounds from a silylated amino(methylene) phosphine
[AD-A159829] N86-18443

AMINO ACIDS
Molecular approaches to selective immunization
[AD-A160141] N86-18954

AMORPHOUS MATERIALS
Research progress in the DOE/SERI Amorphous Silicon Research Project
[DE85-006796] N86-18786
Amorphous silicon conceptual module design and cost estimate
[DE85-012177] N86-18787

AMORPHOUS SEMICONDUCTORS
Status of the light-induced effect in amorphous silicon material and in a-Si solar cells
[DE85-016857] N86-18790

AMPLITUDES
Multiple beamforming
[AD-A159979] N86-19132

ANALOGS
Analog inclination data system
[AD-D011940] N86-18688

ANALYSIS (MATHEMATICS)
Analytic reduction of the monostatic lidar multiple backscattering integral
[AD-A160624] N86-18721
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086

ANALYSIS OF VARIANCE
New measures of diversity
[AD-A160273] N86-19079

ANALYTICAL CHEMISTRY
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957

ANECHOIC CHAMBERS
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329

ANGLE OF ATTACK
On the function e to the power sigma (theta) and the velocity distribution around Eppler profiles
[VTH-M-514] N86-18297

ANGLES (GEOMETRY)
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233

ANGULAR MOMENTUM
A stochastic model for particle impingements on orbiting spacecraft
[NASA-TP-2550] N86-19095

ANIMALS
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799

ANIONS
MNDO calculations of ions in chloroaluminate molten salts
[AD-A160620] N86-18471

ANISOTROPIC FLUIDS
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160

ANISOTROPY
Investigation of the spatially anisotropic component of the laterally averaged molecular Hydrogen/Ag(111) physisorption potential
[AD-A159726] N86-19228

ANNEALING
Method for refining microstructures of prealloyed powder metallurgy titanium articles
[AD-D011944] N86-18491
Effect of hydrostatic pressure on defect annealing in semiconductors
[DE85-015149] N86-19235

ANNIHILATION REACTIONS
Antiproton annihilation propulsion
[AD-A160734] N86-18440
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117
Antiproton annihilations in nuclei
[DE85-010729] N86-19159

ANNUAL VARIATIONS
U.S. Navy climatic study of the Caribbean Sea and Gulf of Mexico. Volume 1: West Caribbean Sea and Central American waters
[AD-A160159] N86-18917

ANNULAR NOZZLES
Performance characteristics of an isolated coannular plug nozzle at transonic speeds
[NASA-TM-87606] N86-18292

ANTENNA FEEDS
Out-of-band response of reflector antennas
[PB85-224476] N86-18644

ANTENNA RADIATION PATTERNS
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341
Computation of the radiation characteristics of a generalized phased array
[NASA-TM-87185] N86-18586
Development of a system to measure the response time of microwave survey instruments to rotating radar antenna patterns
[PB85-230217] N86-18605
Out-of-band response of reflector antennas
[PB85-224476] N86-18644

ANTENNAS
Numerical modeling study of gain and downward radiation for selected FM and VHF-TV broadcast antenna systems
[PB85-238046] N86-18606
Out-of-band response of reflector antennas
[PB85-224476] N86-18644
Frontal passage data from the SOUSY-VHF-radar
[AD-A160211] N86-18919
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Research on plasma physics
[AD-A160425] N86-19213

ANTIGENS
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] N86-18968
The production of RhO(D) negative erythrocytes
[AD-A160775] N86-18971

ANTIGRAVITY
Servo operated anti-G suit pressurization system
[AD-D011932] N86-18988

ANTIPARTICLES
The last hurrah for quarkonium physics: The top system
[DE85-012304] N86-19157

ANTIPROTONS
Antiproton annihilation propulsion
[AD-A160734] N86-18440
Antiproton annihilations in nuclei
[DE85-010729] N86-19159

ANTIREFLECTION COATINGS
Antireflection coatings for planar silicon solar cells
[DE86-001426] N86-18794

ANTISEPTICS
Ultraviolet disinfection of water for small water supplies
[PB85-239960] N86-18579

APPLICATIONS OF MATHEMATICS
Some properties of n-dimensional triangulations
[NASA-CR-176535] N86-19009

APPROXIMATION
Marching iterative methods for the parabolized and thin layer Navier-Stokes equations
[NASA-CR-178028] N86-18650
Theory of spectral methods N86-18662
The concept of information in scientific computing -- spectral approximation N86-18664
Dynamic analysis of systems having large damping variations
[TI85-012190] N86-18757
Representation of topography in spectral models
[AD-A159917] N86-18877
A statistical gravity model for northern Texas
[AD-A160474] N86-18883
The numerical viscosity of entropy stable schemes for systems of conservation laws
[NASA-CR-178021] N86-19065
Computation of spherical harmonics and approximation by spherical harmonic expansions
[AD-A160445] N86-19083
Estimation of population proportion and of probabilities of misclassification from imperfect binomial data by comparison with results of a standard method of known imperfection
[AD-A159926] N86-19099
Estimation of palm measures of stationary point processes
[AD-A160516] N86-19114
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160165] N86-19120

AQUATIC PLANTS
A two-flow model to simulte the interaction of irradiance with a submerged plant canopy N86-19188

AQUEOUS SOLUTIONS
Temporal stability of oxidizer solutions: A survey of candidate recon materials in seawater
[AD-A159734] N86-18457

AQUICULTURE
A two-flow model to simulte the interaction of irradiance with a submerged plant canopy N86-19188

AQUIFERS
Geologic structure of the surficial aquifer system underlying Everglades National Park and Big Cypress National Preserve
[PB85-247609] N86-18772

ARC DISCHARGES
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713

ARC WELDING
Welding procedure specification: Machine gas metal arc welding of carbon steel
[DE86-001492] N86-18763

ARCHAEOLOGY
Remote sensing and archaeological research in Thessaly, Greece. New prospects in archaeological landscape N86-18380

ARCHITECTURE (COMPUTERS)
Saguaro: A distributed operating system based on pools of servicers
[AD-A160183] N86-18592
Adapting a Navier-Stokes code to the ICL-DAP
[NASA-CR-178034] N86-18651

Program of research in computer vision, image processing and architectures for image processing
[AD-A160248] N86-18694
A robust layered control system for a mobile robot
[AD-A160833] N86-18736
UW/NW (University of Washington/Northwest) VLSI Consortium
[AD-A160292] N86-18997
Research on computer architecture and logic design
[AD-A160598] N86-19000
Algorithmic study on systolic array structures
[AD-A160006] N86-19015
Replication and fault-tolerance in the ISIS system, revised
[AD-A160039] N86-19016
A performance measurement methodology for software multiple-backend database systems
[AD-A160284] N86-19026
Distributed architecture and fast parallel algorithms in real-time robot control N86-19055
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057
The SURE Reliability Analysis Program
[NASA-TM-87593] N86-19096

ARCTIC REGIONS
The Cold Arctic Mesopause Project (CAMP) campaign 1982 N86-18830
Super Cold Arctic Mesopause Project (CAMP): A research project to investigate the polar middle atmosphere in summer with rocket launches from 65 deg-80 deg N N86-18831

ARGON
Lattice dynamics of rare gas multilayers on the Ag(111) surface. Theory and experiment
[AD-A159718] N86-19227

ARID LANDS
Application of METEOSAT data for remote sensing of Earth resources: EARSeL Working Group 7 report --- agrometeorology in drought areas N86-18357

ARMED FORCES (UNITED STATES)
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057

AROMATIC COMPOUNDS
Surface-enhanced Raman spectroscopy as a probe or adsorbate-surface bonding: Benzene and monosubstituted benzenes adsorbed at gold electrodes
[AD-A159978] N86-18463

ARRAYS
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
Schottky barrier infrared detector and process
[AD-D011925] N86-18607
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938
Algorithmic study on systolic array structures
[AD-A160006] N86-19015

ARSENIC
Effects of arsenic doping on the solidification dynamics of pulsed laser melted silicon
[DE85-006107] N86-18564

ARTERIES
Double wall artery heat pipe
[AD-A160012] N86-18671

ARTIFICIAL INTELLIGENCE
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314
A robust layered control system for a mobile robot
[AD-A160833] N86-18736
Toward a surface sketch
[AD-A159693] N86-18767
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel
[NASA-CR-176523] N86-18990
Routines
[AD-A160481] N86-19032
Automatic processing of Navy message narrative
[AD-A159670] N86-19056
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060

ASPECT RATIO
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335

ASSEMBLIES
An analytical investigation of a conceptual design for the station transverse boom rotary joint structure
[NASA-TM-87665] N86-18347

ASTROMETRY
Complementary astrometric observations of minor planets at Barcelona --- HIPPARCOS N86-18417
The Astronomisches Rechen-Institut (ARI) catalog of astrometric data for the HIPPARCOS Input Catalog N86-18418
Astrometric data for nearby stars --- HIPPARCOS N86-18419
Only two years left to supply accurate positions to the HIPPARCOS nonastrometric stars N86-18420
Meridian observation of the faint stars proposed for HIPPARCOS N86-18422

ASTRONAUT TRAINING
Spacelab special: EURECA N86-18437
First German Spacelab missions, no. 6 N86-18979

ASTRONAUTS
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975

ASTRONOMICAL CATALOGS
The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation --- conferences
[ESA-SP-234] N86-18388
The Stellar Data Center (CDS) and HIPPARCOS: Afterthoughts N86-18393
Present status of the Input Catalog --- HIPPARCOS mission N86-18395
The INCA data base: Sub-base from Set of Identifications, Measurements and Bibliography for Astronomical Data (SIMBAD) --- HIPPARCOS N86-18396
Definition of the survey --- HIPPARCOS Input Catalog N86-18397
Simulations: The role played by static pressures --- HIPPARCOS input catalog N86-18398
Optimizing the Input Catalog through simulations --- HIPPARCOS N86-18399
Astrophysical aspects of the contents of the Input Catalog --- HIPPARCOS N86-18401
The HIPPARCOS Input Catalog (INCA): Simulation of observations over a long period N86-18402
Existing data on candidate stars for the HIPPARCOS Input Catalog: Present status and developments N86-18404
Photometric data related to the formation of the Input Catalog --- HIPPARCOS N86-18405
Standard stars for the on-orbit photometric payload calibration --- HIPPARCOS N86-18406
New ground-based photometric observations --- HIPPARCOS calibrations N86-18407
Selection of stars in open clusters for the HIPPARCOS mission N86-18411
Concerns, realizations and prospects of the subgroup double stars of the HIPPARCOS Input Catalog (INCA) consortium N86-18413
New wide double stars in the HIPPARCOS Input Catalog N86-18414
Minor planets in the HIPPARCOS program N86-18416
The Astronomisches Rechen-Institut (ARI) catalog of astrometric data for the HIPPARCOS Input Catalog N86-18418
Astrometric data for nearby stars --- HIPPARCOS N86-18419
Only two years left to supply accurate positions to the HIPPARCOS nonastrometric stars N86-18420
Carlsberg automatic transit circle observations for INCA --- HIPPARCOS Input Catalog (INCA) N86-18421
Meridian observation of the faint stars proposed for HIPPARCOS N86-18422
Radial velocity measurements of late-spectral-type stars --- HIPPARCOS N86-18425
Complementary photometric observations for HIPPARCOS N86-18426
The TYCHO Input Catalog and the guide star catalog of the Space Telescope --- HIPPARCOS N86-18428
Report by Subgroup 2130 (link to extragalactic reference objects) --- HIPPARCOS N86-18429
A critical examination of radio star data --- HIPPARCOS Input Catalog N86-18430

ASTRONOMICAL COORDINATES
Astrometric data for nearby stars --- HIPPARCOS N86-18419
Milliarcsecond structures, VLBI and optical positions of 8 HIPPARCOS radio stars N86-18432

ASTRONOMICAL OBSERVATORIES
Presentation of the astronomical data base Set of Identifications, Measurements, and Bibliography for Astronomical Data (SIMBAD) N86-18394

ASTRONOMICAL SPECTROSCOPY
Radial velocities for HIPPARCOS with the Fehrenbach objective prisms N86-18424

ASTRONOMICAL TELESCOPES
Performances of HIPPARCOS optical telescope N86-18390
Composite mirrors and structures for balloon telescopes N86-18863

ASTROPHYSICS
Astrophysical aspects of the contents of the Input Catalog --- HIPPARCOS N86-18401

ASYMMETRY
Why bother with experiments?
[AD-A160634] N86-19248

ASYMPTOTIC METHODS
Matched asymptotic expansions to similarity solutions of shock diffraction
[NASA-CR-178022] N86-18649
Covariate measurement error in logistic regression
[AD-A160277] N86-19111
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160185] N86-19120

ASYMPTOTIC PROPERTIES
Values in the interior of the L sup 2 minimal solutions of the Delta Delta bar equation in the unit ball of C sup n
[CTH-MATH-1985-11] N86-19090
Space-time means and nonlinear Klein-Gordon equations
[CTH-MATH-1985-19] N86-19245

ASYMPTOTIC SERIES
A note on asymptotic joint distribution of the Eigenvalues of a noncentral multivariate F matrix
[AD-A160422] N86-19082
Principal component analysis under correlated multivariate regression equations model
[AD-A160266] N86-19109

ATLANTIC OCEAN
Physical oceanographic characteristics of the Nares Plain region of the western North Atlantic
[DE86-000059] N86-18948

ATMOSPHERIC ATTENUATION
Molecular transmission band models for the uniformly mixed and the trace gases
[AD-A160442] N86-18466
Clear-air transmission in the 8 to 12-micrometer band at selected stations
[AD-A160625] N86-19195

ATMOSPHERIC BOUNDARY LAYER
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18930

ATMOSPHERIC CHEMISTRY
Airglow O2(1 Sigma) atmospheric band at 8645 Angstrom and the rotational temperature observed at 23 deg S
[INPE-3631-PRE/811] N86-18809
Ozone measurements during MAP/WINE --- Sweden N86-18822
Project MAP/Globus NOx: Coordinated observations of nitrogen oxides in the middle atmosphere N86-18847
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign --- polar regions N86-18856
The sodium layer above Andoya, Norway, as observed by lidar from January through April 1984 N86-18857
Some aspects of the rapid spatiotemporal variations of stratospheric ozonify N86-18874
Satellite measurements of stratosphere constituents in the trace state N86-18875
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-018490] N86-18931

ATMOSPHERIC CIRCULATION
Dispersion experiments using short-term releases of an atmospheric tracer
[DE85-018519] N86-18803
Large-scale structure of the middle atmosphere during the winter 1983/84 N86-18817
Use of satellite data to monitor high-altitude winds N86-18845
In-flight turbulence detection
[AD-A160380] N86-18923
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18930

ATMOSPHERIC COMPOSITION
Molecular transmission band models for the uniformly mixed and the trace gases
[AD-A160442] N86-18466
Satellite measurements of stratosphere constituents in the trace state N86-18875

ATMOSPHERIC DENSITY
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18884

ATMOSPHERIC DIFFUSION
Dispersion experiments using short-term releases of an atmospheric tracer
[DE85-018519] N86-18803

ATMOSPHERIC EFFECTS
The 737 graphite composite flight spoiler flight service evaluation
[NASA-CR-172600] N86-18448

ATMOSPHERIC ELECTRICITY
Atmospheric electricity hazards threat environment definition
[AD-A159739] N86-18909

ATMOSPHERIC IONIZATION
Spectral characteristics of positive ion-current fluctuations measured by ion probes --- polar atmosphere N86-18853

ATMOSPHERIC MODELS
Molecular transmission band models for the uniformly mixed and the trace gases
[AD-A160442] N86-18466
Ozone and nitrogen oxides in the middle atmosphere: A three-dimensional model simulation --- high latitude N86-18850
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
Development and validation of a vertically two-dimensional mesoscale numerical model
[AD-A160741] N86-18927

ATMOSPHERIC PHYSICS
The operational meteorology of convective weather. Volume 2: Storm scale analysis
[AD-A159919] N86-18913

ATMOSPHERIC PRESSURE
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Soesterberg, Netherlands. Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Hickam AFB, Hawaii
[AD-A159730] N86-18906
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Kl Sawyer AFB, Michigan
[AD-A159732] N86-18908

ATMOSPHERIC RADIATION
Radiative flux parameterizations in a boundary layer model
[INPE-3647-RPE/484] N86-18808

ATMOSPHERIC SOUNDING
The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research
[ESA-SP-229] N86-18811
Scientific balloon and sounding rocket program in Germany N86-18812
The French sounding rocket and balloon space research program N86-18813
Swiss scientific balloon and sounding rocket experiments 1983-1985 N86-18814
The Swedish sounding rocket and balloon program N86-18815
The Norwegian scientific balloon and sounding rocket program 1985-1988 N86-18816
Large-scale structure of the middle atmosphere during the winter 1983/84 N86-18817
The middle atmosphere above Andoya Norway during the winter 1983/84 as derived from metrockets and OH nightglow observations N86-18818
Ozone measurements during MAP/WINE --- Sweden N86-18822
The Coordinated EISCAT and Balloon Observations (CEBO): Experiment and results --- auroral particle precipitation N86-18823
The Cold Arctic Mesopause Project (CAMP) campaign 1982 N86-18830
Super Cold Arctic Mesopause Project (CAMP): A research project to investigate the polar middle atmosphere in summer with rocket launches from 65 deg-80 deg N N86-18831
The tethered satellite system project N86-18842
Use of satellite data to monitor high-altitude winds N86-18845
Ground-based microwave observations of mesospheric ozone: Intercomparison with measurements obtained by other techniques N86-18846
Project MAP/Globus NOx: Coordinated observations of nitrogen oxides in the middle atmosphere N86-18847
Stratospheric water-vapor measurements on board long-duration balloons N86-18848
Comparison between ST radar and in situ balloon measurements --- atmospheric sounding N86-18849
Turbulent parameters of the lower thermosphere as determined by mass spectrometer during the MAP/WINE campaign --- polar regions N86-18851
On the comparison of turbulent parameters and eddy coefficients in the lower thermosphere --- polar regions; winter N86-18852
Spectral characteristics of positive ion-current fluctuations measured by ion probes --- polar atmosphere N86-18853
Turbulence characteristics as determined by cross correlation analysis --- atmospheric turbulence N86-18854
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign --- polar regions N86-18856
The sodium layer above Andoya, Norway, as observed by lidar from January through April 1984 N86-18857
Extending the capabilities of sounding rocket class experiments N86-18860
Long-duration flights using infrared Montgolfieres N86-18861
Middle atmosphere turbulence as determined by ion probes --- polar regions N86-18871
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873
Some aspects of the rapid spatiotemporal variations of stratospheric ozonity N86-18874
Design and testing of hardware improvements of an acoustic sounder
[AD-A159672] N86-19126

ATMOSPHERIC TEMPERATURE
Airglow O2(1 Sigma) atmospheric band at 8645 Angstrom and the rotational temperature observed at 23 deg S
[INPE-3631-PRE/811] N86-18809
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign --- polar regions N86-18856
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18884
Monthly and seasonal weather outlook for August 1985, volume 39, number 15, July 30, 1985 N86-18935

ATMOSPHERIC TURBULENCE
Turbulent parameters of the lower thermosphere as determined by mass spectrometer during the MAP/WINE campaign --- polar regions N86-18851
On the comparison of turbulent parameters and eddy coefficients in the lower thermosphere --- polar regions; winter N86-18852
Turbulence characteristics as determined by cross correlation analysis --- atmospheric turbulence N86-18854
Middle atmosphere turbulence as determined by ion probes --- polar regions N86-18871
A computer program to model the Cn2 optical turbulence characteristics of a given atmosphere, its conversion to IBM FORTRAN and utilization
[AD-A159762] N86-18911

ATOMIC BEAMS
Forces on neutral atoms due to electromagnetic fields
[AD-A160719] N86-19151

ATOMIC STRUCTURE
Self-consistent electronic structure of alpha-phase Hume Rothery electron compound alloys Cu sub c Zn sub1-c, Cu sub cGa sub1-c, and Cu sub c Ge sub1-c
[DE85-017560] N86-19234

ATOMS
Polyphosphazenes with etheric side groups: Prospective biomedical and solid electrolyte polymers
[AD-A160549] N86-18558

ATTITUDE (INCLINATION)
Double wall artery heat pipe
[AD-A160012] N86-18671
Analog inclination data system
[AD-D011940] N86-18688

ATTITUDE CONTROL
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18319
Two generations of microcomputer-based program units for sounding rocket attitude control systems N86-18865
The Saab spinning rocket attitude control (SPINRAC): An attitude control system for obtaining low impact dispersion N86-18866

AUDIO EQUIPMENT
Digital audio editing
[BBC-RD-1985/10] N86-18583

AUDITORY DEFECTS
Practical application of basic research on impulse noise hazard
[AD-A160432] N86-18964
Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study
[AD-A160799] N86-18974

AUDITORY PERCEPTION
Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study
[AD-A160799] N86-18974

AUDITORY SIGNALS
Speech recognition: Acoustic, phonetic and lexical
[AD-A160008] N86-18589
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137

AUDITORY STIMULI
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] N86-18961

AUGER SPECTROSCOPY
The use of electron beam position modulation in auger depth profile analysis
[AD-A159712] N86-19163
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
AURORAL ARCS
Acceleration of auroral electrons by lower-hybrid waves N86-18827
AURORAL ZONES
Plasma instabilities in the auroral E-region N86-18825
Nonisotropic temperature distributions in the auroral F-region as measured with EISCAT N86-18829
AURORAS
The Coordinated EISCAT and Balloon Observations (CEBO): Experiment and results --- auroral particle precipitation N86-18823
Are parallel electric fields really the cause of auroral particle acceleration? N86-18826
Scattering of electrons in the equatorial plane during a pulsating aurora N86-18828
Resonant generation of ion waves on auroral field lines by positive slopes in ion velocity space
[KGI-PREPRINT-083] N86-19211
AUSTENITE
Structural changes in ferrite-austenite steel O3Kh26N6 during hot torsion
[BLL-M-36451-(5828.4F)] N86-18484
AUSTENITIC STAINLESS STEELS
Evaluation of the fatigue strength of austenitic steels at temperatures of 293 and 77 K
[BLL-RISLEY-TR-5231-(9091.9F)] N86-18486
Role of martensite conversion in hydrogen embrittlement of unstable austenite steels N86-18525
AUTOIONIZATION
Distortion of He emission lines after fast-ion collisions
[DE85-018347] N86-19161
AUTOMATIC CONTROL
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
Microcomputer-based local automation model: Functional description
[AD-A160810] N86-19002
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Automating sensitivity analysis of computer models using computer calculus
[DE85-018095] N86-19039
Access to inter-organization computer networks
[AD-A160855] N86-19051
Automatic processing of Navy message narrative
[AD-A159670] N86-19056
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160663] N86-19060
AUTOMOBILES
Ceramic Technology for Advanced Heat Engines Project
[DE86-001365] N86-18568
AUTONOMOUS NAVIGATION
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314
AUTOREGRESSIVE PROCESSES
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137
AVAILABILITY
Statistical aspects of reliability, maintainability and availability
[AD-A160126] N86-19102
AVIONICS
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
AXES (REFERENCE LINES)
The science of and advanced technology for cost-effective manufacture of high precision engineering products. Volume 2: Mechanics of two axes passive precision level monitor for machine tools
[AD-A160140] N86-18731
AXIAL COMPRESSION LOADS
Stressed-strained state of triple-layer honeycomb panels with carbon-plastic sheaths N86-18521
AXIAL FLOW
Effects of inflow conditions on discrete frequency noise generated by small, axial flow fans
[AD-A160579] N86-19135
AXIAL STRAIN
Fluid structural response of axially cracked cylinders
[TI85-016275] N86-18759
AXIAL STRESS
Drilling risers for great water depths: Advantage for mass reduction by means of composite materials
[SNIAS-852-430-101] N86-18454
AXISYMMETRIC BODIES
Collocation method for static and dynamic analysis of shells of revolution N86-18576
AZEOTROPES
The performance of a residential heat pump operating with a nonazeotropic binary refrigerant mixture
[DE85-005245] N86-18782

B

BACKGROUND NOISE
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] N86-18981
BACKSCATTERING
Analytic reduction of the monostatic lidar multiple backscattering integral
[AD-A160624] N86-18721
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
Study of large aerosol particles
[AD-A160379] N86-18880
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929
Review of the Raman backscattering technique for the remote measurement of subsurface temperature and salinity: Volume 1
[AD-A160466] N86-18945
BACKWASH
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
BACTERIA
Rapid identification of micro-organisms
[AD-A159945] N86-18952
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
BALL BEARINGS
Tribotechnical characteristics of ball bearing steel after chromizing N86-18531
Surface creep of mineral oil on inner ring of momentum wheel bearing
[AD-A160746] N86-18735
BALLISTICS
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
BALLOON FLIGHT
Technical and operational improvements at French balloon launching centers N86-18862
BALLOON SOUNDING
The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research
[ESA-SP-229] N86-18811
Scientific balloon and sounding rocket program in Germany N86-18812
The French sounding rocket and balloon space research program N86-18813
Swiss scientific balloon and sounding rocket experiments 1983-1985 N86-18814
The Swedish sounding rocket and balloon program N86-18815
The Norwegian scientific balloon and sounding rocket program 1985-1988 N86-18816
The Coordinated EISCAT and Balloon Observations (CEBO): Experiment and results --- auroral particle precipitation N86-18823
Stratospheric water-vapor measurements on board long-duration balloons N86-18848
Long-duration flights using infrared Montgolfieres N86-18861
Technical and operational improvements at French balloon launching centers N86-18862
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873
BALLOON-BORNE INSTRUMENTS
Composite mirrors and structures for balloon telescopes N86-18863
BALLOONS
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718
Long-duration flights using infrared Montgolfieres N86-18861
BALLS
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159882] N86-18752
BANACH SPACE
Weak limits of probability measures on metric Schauder spaces
[CTH-MATH-1985-17] N86-19119
BANDWIDTH
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18319
Schottky barrier infrared detector and process
[AD-D011925] N86-18607
The amount of noise inherent in bandwidth selection for a kernel density estimator
[AD-A160235] N86-19107
BARIUM COMPOUNDS
Nonlinear materials for the millimeter spectral region
[AD-A159634] N86-18613
BARIUM ION CLOUDS
Energization of electrons following ion release in the solar wind N86-18843
BAROMETERS
A digital microbarograph system
[AD-A160914] N86-18701
BATHYTHERMOGRAPHS
OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program interim report: The Airborne Ocean Thermal Structure Mapping Project
[AD-A160283] N86-18943
BAYES THEOREM
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
BEAM INJECTION
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel
[DE85-016636] N86-19155
BEAM INTERACTIONS
An estimate of the contributions of bellows to the impedances and beam instabilities of the SSC
[DE85-017363] N86-19169
BEAMS (RADIATION)
Tevatron extraction microcomputer
[DE85-016985] N86-19170
Design of the NSLS infrared beam line mirror no. 1
[DE85-018481] N86-19198
BEARING (DIRECTION)
Directional wave measurement and analysis
[AD-A160760] N86-18947
BEHAVIOR
An investigation into effects of environmental changes on locus of control
[AD-A160861] N86-18987
BELLOWS
An estimate of the contributions of bellows to the impedances and beam instabilities of the SSC
[DE85-017363] N86-19169
BENDING
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Elastic buckling of thin-walled unstiffened circular cylinders under bending, axial compression and internal pressure
[ESDU-84006] N86-18744
BENZENE
Surface-enhanced Raman spectroscopy as a probe or adsorbate-surface bonding: Benzene and monosubstituted benzenes adsorbed at gold electrodes
[AD-A159978] N86-18463
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957
Intramolecular coupling in metal-free binuclear phthalocyanines
[AD-A160784] N86-19154
BETATRONS
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel
[DE85-016636] N86-19155
BIBLIOGRAPHIES
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308

Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
Publications of the JPL Solar Thermal Power Systems Project 1976 through 1985
[NASA-CR-176533] N86-18777
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379] N86-18950
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] N86-18955
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 279)
[NASA-SP-7011(279)] N86-18960
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
An annotated bibliography of literature integrating organizational and systems theory
[AD-A160912] N86-19249
Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports
[AD-A160409] N86-19256

BINARY FLUIDS
Fingering patterns in Hele-Shaw flow
[DE85-014952] N86-18679

BINARY MIXTURES
Binary liquid gels
[DE85-014953] N86-18473
The performance of a residential heat pump operating with a nonazeotropic binary refrigerant mixture
[DE85-005245] N86-18782

BINARY STARS
Concerns, realizations and prospects of the subgroup double stars of the HIPPARCOS Input Catalog (INCA) consortium N86-18413
New wide double stars in the HIPPARCOS Input Catalog N86-18414
Observability of spectroscopic double stars by HIPPARCOS N86-18415

BINDERS (MATERIALS)
Binder study for HMX/TATB explosives
[DE86-001235] N86-18573

BIOASSAY
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159726] N86-18962

BIODEGRADATION
Suitability of polyvinyl chloride pipe for monitoring TNT, RDX, HMX, and DNT in groundwater
[AD-A160733] N86-18798
Microbial degradataion of oil in the marine environment
[FOA-C-40219-B4] N86-18807

BIOLOGICAL EFFECTS
Carbon dioxide and climate: Summaries of research in FY 1985
[DE86-000044] N86-18932
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] N86-18955
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 279)
[NASA-SP-7011(279)] N86-18960
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969

BIVARIATE ANALYSIS
Moving average models with bivariate exponential and geometric distributions
[AD-A160178] N86-19071
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080

BLANKETS (FUSION REACTORS)
Assessment of neutron requirements and potential sources for fusion development
[DE85-901723] N86-19183

BLAST LOADS
Reflected impulse near spherical charges
[AD-A160797] N86-18572

BLOOD
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973
A model of inhaled gas and vapor transport in the human lung
[AD-A160629] N86-18976

BLOOD VESSELS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970

BLOWDOWN WIND TUNNELS
Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290

BLOWERS
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737

BOATTAILS
Performance characteristics of an isolated coannular plug nozzle at transonic speeds
[NASA-TM-87606] N86-18292

BODIES OF REVOLUTION
Memoirs of the Faculty of Engineering, Hokkaido University, volume 16, no. 4(no. 73)
[ISSN-0368-9379] N85-18575
Collocation method for static and dynamic analysis of shells of revolution N86-18576

BODY TEMPERATURE
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] N86-18965

BOILERS
Life extension of components with high cumulative fatigue usage
[TI85-014631] N86-18758
Development of combined nitrogen oxide/sulfur oxide environmental-control technology
[DE86-001301] N86-18804

BOILING
Method for making alloy additions to base metals having higher melting points
[AD-D011928] N86-18489

BOLOMETERS
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697

BOLTS
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755

BOLTZMANN DISTRIBUTION
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314

BOLTZMANN-VLASOV EQUATION
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
The L sup p estimates for the nonlinear space-homogeneous Boltzmann equation
[CTH-MATH-1985-12] N86-19091
On the Boltzmann equation in unbounded space far from equilibrium and the limit of zero mean free path
[CTH-MATH-1985-16] N86-19244

BONDING
Surface-enhanced Raman spectroscopy as a probe or adsorbate-surface bonding: Benzene and monosubstituted benzenes adsorbed at gold electrodes
[AD-A159978] N86-18463

BOOMS (EQUIPMENT)
An analytical investigation of a conceptual design for the station transverse boom rotary joint structure
[NASA-TM-87665] N86-18347

BOREHOLES
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
A study to determine the merit of ocean borehole systems for acoustic detection
[AD-A160149] N86-19133

BORON
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182

BORON ALLOYS
Investigation of rapidly quenched rare Earth iron alloys for permanent magnets
[AD-A159946] N86-18494

BOUNDARY LAYER SEPARATION
Axial compressor reversed flow performance
[AD-A160773] N86-18327

BOUNDARY LAYER STABILITY
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18800

BOUNDARY LAYERS
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646
Radiative flux parameterizations in a boundary layer model
[INPE-3647-RPE/484] N86-18808

BOUNDARY VALUE PROBLEMS
Theory of spectral methods N86-18882
Convergence to steady state of solutions of Burgers' equation
[NASA-CR-178017] N86-19084
A two-dimensional mesh moving technique for time dependent partial differential equations
[AD-A160204] N86-19073
Numerical analysis
[AD-A160207] N86-19074
Values in the interior of the L sup 2 minimal solutions of the Delta Delta bar equation in the unit ball of C sup n
[CTH-MATH-1985-11] N86-19090

BOUSSINESQ APPROXIMATION
Basic equations of fluid mechanics N86-18653
The time-dependent incompressible Navier-Stokes equations via Finite Element Method (FEM) N86-18658

BRAIN
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] N86-18878

BRANCHING (MATHEMATICS)
An extension of Spitzer's integral representation theorem with an application
[AD-A160184] N86-19072

BREADBOARD MODELS
Flight model discharge system
[AD-A160434] N86-18349

BRIGHTNESS
Eye movements and spatial pattern vision
[AD-A160408] N86-18963

BRITTLENESS
SXRF studies of bulk crack-tip plastic relaxation
[DE85-018013] N86-18780

BROADBAND
An analysis of stimulus determinants of target detection in PBB (Passive broadband) displays
[AD-A160203] N86-19134
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone
[KGI-PREPRINT-081] N86-19209
Research on plasma physics
[AD-A160425] N86-19213

BROADCASTING
Digital audio editing
[BBC-RD-1985/10] N86-18583

BRONCHI
A model of inhaled gas and vapor transport in the human lung
[AD-A160629] N86-18976

BROWNIAN MOVEMENTS
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19108
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19180

BUBBLES
Study of optical sound generation and amplification
[AD-A160758] N86-19166

BUCKLING
Buckling of thin-walled unstiffened circular cylinders under torsion and pressure
[ESDU-84012] N86-18746

BUDGETING
Policy and organizational considerations for improving transfer of university research information and effecting availability of expertise to state agencies
[PB85-232932] N86-19081
Indianapolis technical innovation program: Program results N86-19086

BULK MODULUS
An experimental investigation of acoustic propagation in saturated sands with variable fluid properties
[AD-A159930] N86-19130

BUOYS
Directional wave measurement and analysis
[AD-A160760] N86-18947

BURGER EQUATION
Convergence to steady state of solutions of Burgers' equation
[NASA-CR-178017] N86-19084
BURNERS
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-19646
BUTADIENE
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18580
BUTT JOINTS
Fatigue behaviour of AISI 304 L stainless steel elements, butt welded by the electron beam process
[BLL-RISLEY-TR-5234-(9091.9F)] N86-18743

C

CABLES (ROPES)
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941
CALCIUM
Small-angle neutron scattering data on cements with pozzolanic additives
[AERE-R-11609] N86-19162
CALCIUM COMPOUNDS
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559
CALCIUM SULFIDES
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
CALCULUS
Automating sensitivity analysis of computer models using computer calculus
[DE85-018095] N86-19039
CALIBRATING
Calibration of an on-ground aircraft tracking radar by aerial photogrammetry
[NAL-TR-861] N86-18311
Radiometric correction of Modular Optoelectronic Multispectral Scanner (MOMS) CCD images
N86-18305
Standard stars for the on-orbit photometric payload calibration — HIPPARCOS N86-18406
New ground-based photometric observations — HIPPARCOS calibrations N86-18407
Metric calibration of the Millstone Hill l-band radar
[AD-A160362] N86-18583
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117
CALIFORNIA
Hydrographic data from the OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program: OPTOMA16, 20 May - 23 June 1985
[AD-A160270] N86-18942
OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program interim report: The Airborne Ocean Thermal Structure Mapping Project
[AD-A160283] N86-18943
CANCER
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975
CANOPIES (VEGETATION)
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18786
CANTILEVER BEAMS
Deflection in tapered cantilever beams deflection (gap opening) in double cantilever type fracture toughness specimens
[AD-A159867] N86-18753
CARBON
Effect of graphite cocrystallization growth of diamond single crystals in metal-carbon system N86-18536
Binding between carbon atoms and vacancies in platinum
[DE86-000624] N86-19238
CARBON CYCLE
Carbon dioxide and climate: Summaries of research in FY 1985
[DE86-000044] N86-18932
CARBON DIOXIDE
Plasticization of glassy polymers by CO(2)
[AD-A159772] N86-18545
Collision of Mach reflections with a 90 deg ramp in air and CO2
[UTIAS-290] N86-18845
Carbon dioxide and climate: Summaries of research in FY 1985
[DE86-000044] N86-18932
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] N86-18989
CARBON DIOXIDE LASERS
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
CARBON DISULFIDE
Spectroscopic studies of carbon disulfide at high pressure
[AD-A160456] N86-18488
CARBON FIBER REINFORCED PLASTICS
Drilling risers for great water depths: Advantage for mass reduction by means of composite materials
[SNIAS-852-430-101] N86-18454
Properties of carbon-glass plastic material under pure flexure N86-18519
Stressed-strained state of triple-layer honeycomb panels with carbon-plastic sheaths N86-18521
Composite mirrors and structures for balloon telescopes N86-18863
CARBON FIBERS
Preliminary study of holographic interferometry applied to carbon fibre specimens
[AD-A160770] N86-18698
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
CARBON MONOXIDE
Catalytic hydrogenation of carbon monoxide
[DE86-001547] N86-18475
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497
CARBON STEELS
Tasks of accelerating scientific and technical progress in metal science of high-grade steels
[BLL-M-38465-(5828.4)] N86-18481
Surface stress modification for repair of stress-relieved carbon steel fabrications
[DE86-000583] N86-18507
Welding procedure specification: Machine gas metal arc welding of carbon steel
[DE86-001492] N86-18763
CARBOXYLATES
Humidity sensing and measurement employing halogenated organic polymer membranes
[PB85-248906] N86-18706
CARBURIZING
The application of chromium carbide to the surface of iron and steels
[BLL-M-38489-(5828.4)] N86-18477
CARIBBEAN SEA
U.S. Navy climatic study of the Caribbean Sea and Gulf of Mexico. Volume 1: West Caribbean Sea and Central American waters
[AD-A160158] N86-18917
CARTRIDGES
Recirculating electric air filter
[DE85-017751] N86-18632
CASCADE CONTROL
A cascaded coding scheme for error control
[NASA-CR-176513] N86-19062
CASCADE FLOW
Dynamic characteristics of the 48-inch water tunnel drive pump
[AD-A159904] N86-18668
CAST ALLOYS
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
CATALOGS
Catalog of air weather service technical documents
[AD-A159981] N86-18912
CATALOGS (PUBLICATIONS)
Aeronautical facilities catalogue. Volume 2: Airbreathing propulsion and flight simulators
[NASA-RP-1139] N86-18328
Defense technical information center cataloging guidelines
[AD-A160100] N86-19255
CATALYSIS
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
CATALYSTS
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497
Spectroscopy of metal/titania systems
[AD-A160696] N86-18499
Procedure for manufacturing poly (acetylene) foils
[DE86-001259] N86-18566
Polymer-based catalysts
[DE85-007904] N86-18567
Phosphoric acid electric utility fuel cell technology development
[NASA-CR-176496] N86-18638
CATALYTIC ACTIVITY
Catalytic hydrogenation of carbon monoxide
[DE86-001547] N86-18475
CATECHOLAMINE
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] N86-18958
CAUCHY INTEGRAL FORMULA
An extension of Spitzer's integral representation theorem with an application
[AD-A160184] N86-19072
CAVITATION FLOW
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
Acoustic detection of cavitation in a prototype centrifugal pump
[DE85-018447] N86-19142
CAVITIES
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
CCD STAR TRACKER
The Cygnus loop supernova remnant: New observations and a framework for understanding its structure and evolution N86-19273
CEILING (AIRCRAFT CAPABILITY)
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
CEILINGS (METEOROLOGY)
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Soesterberg, Netherlands. Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Muir AAF, Harrisburg, Pennsylvania
[AD-A159731] N86-18907

CELESTIAL REFERENCE SYSTEMS
Relating the HIPPARCOS reference frame to the radio reference frame via Very Large Array (VLA) measurements of the precise position of stellar radio emission
N86-18431
Radio observations of HIPPARCOS stars N86-18433
Using Space Telescope to tie the HIPPARCOS and extragalactic reference frames together N86-18434

CELLS (BIOLOGY)
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] N86-18951
Rapid identification of micro-organisms
[AD-A159945] N86-18952
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956

CEMENTS
Thermal stability of certain hydrated phases in systems made using portland cement
[AD-A160443] N86-18553
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
Small angle neutron scattering data on cements with pozzolanic additives
[AERE-R-11609] N86-19162

CENSORED DATA (MATHEMATICS)
Assessing system reliability using censoring methodology
[AD-A160616] N86-19115

CENTRAL AMERICA
Central American climatology
[AD-A159989] N86-18915

CENTRAL PROCESSING UNITS
Bit error rate testing of a proof-of-concept model baseband processor
[NASA-TM-87206] N86-18343
Investigations of the access to the main memory of vector processor systems
[JUEL-1994] N86-19006

CENTRIFUGAL PUMPS
Acoustic detection of cavitation in a prototype centrifugal pump
[DE85-018447] N86-19142

CERAMICS
Effect of ion implantation on subsequent erosion and wear behavior of solids
[DE86-000088] N86-18506
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Ceramic Technology for Advanced Heat Engines Project
[DE86-001365] N86-18568
Memoirs of the Faculty of Engineering, Hokkaido University, volume 16, no. 4(no. 73)
[ISSN-0368-9379] N86-18575
Preparation of mica glass-ceramics by crystallization of fluorphlogopite-fluormuscovite glass N86-18577
Investigation of Re-X glass ceramic for acceleration insulating columns
[DE86-000598] N86-18639
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
Thermal plasma chemical synthesis of powders
[DE86-000793] N86-19225

CERMETS
Thermal plasma chemical synthesis of powders
[DE86-000793] N86-19225

CESSNA 172 AIRCRAFT
Report of noise measurements with 2 different microphone dispositions on airplane type Cessna F 172L
[VTH-M-510] N86-19143

CHAFF
Intercomparison of wind measurements performed with metrockets N86-18820

CHANDRASEKHAR EQUATION
Factorization and reduction methods for optimal control of distributed parameter systems
[NASA-CR-178033] N86-18992

CHANNEL FLOW
Subdivision Froude number
[AD-A160486] N86-18674

CHANNELS (DATA TRANSMISSION)
Bit error rate testing of a proof-of-concept model baseband processor
[NASA-TM-87206] N86-18343
A resource conflict resolution problem formulated in continuous time
[AD-A159675] N86-18587

CHARCOAL
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800

CHARGE COUPLED DEVICES
Radiometric correction of Modular Optoelectronic Multispectral Scanner (MOMS) CCD images
N86-18365

CHEBYSHEV APPROXIMATION
Full pseudospectral solution to the Euler equations of motion for airfoil flow at transonic speeds
[AD-A159714] N86-18293

CHECKOUT
Debugging in a parallel environment
[DE85-010775] N86-19040

CHEMICAL ANALYSIS
Automated ion chromatography
[AD-A159764] N86-18460
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973

CHEMICAL BONDS
Preparation of P-N-H and p-p compounds from a silylated amino(methylene) phosphine
[AD-A159829] N86-18443
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618
Binding between carbon atoms and vacancies in platinum
[DE86-000624] N86-19238

CHEMICAL COMPOSITION
Prospects for developing a technology for producing corrosion resistant steel
[BLL-M-36460-(5828.4)] N86-18478
Influence of chemical composition of flux on ductility of seam metal in electroslag welding N86-18544
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800

CHEMICAL COMPOUNDS
A new polymer for the heat-treatment shop and the operating room N86-18540

CHEMICAL ELEMENTS
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571

CHEMICAL EQUILIBRIUM
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497

CHEMICAL LASERS
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712

CHEMICAL PROPERTIES
Chemical applications of topology and group theory. Twenty 8-vertex polyhedra and their rearrangements
[AD-A160589] N86-18469
Chemical modification of poly(ethylene imine) for polymeric electrolyte
[AD-A160482] N86-18554
Fracto-emission from polymers
[AD-A160510] N86-18555
Deuterated polymers: Chemical and physical properties and future prospects
[AD-A160762] N86-18562
Chemical applications of topology and group theory. 19: The even permutations of the ligands in five-coordinate complexes viewed as proper rotations of the regular icosahedron
[AD-A160747] N86-19153

CHEMICAL REACTIONS
Interaction effects in premixed turbulent combustion
[AD-A160077] N86-18464
MNDO calculations of ions in chloroaluminate molten salts
[AD-A160620] N86-18471
Dielectric analysis of thermoset cure
[AD-A160291] N86-18551
Incorporation of radiohalogens via versatile organometallic reactions: Applications in radiopharmaceutical chemistry
[DE86-000087] N86-19184

CHEMICAL WARFARE
Temporal stability of solid oxidizers at high temperature and humidity
[AD-A159735] N86-18458

CHEMILUMINESCENCE
Te2 chemiluminescence from alkali Atom-TeCl4 reactions
[AD-A160913] N86-18472

CHEMISORPTION
Spectroscopy of metal/titania systems
[AD-A160698] N86-18498
Plasticization of glassy polymers by CO(2)
[AD-A159772] N86-18545

CHIPS
Properties of TiC powders produced from titanium or titanium-alloy chips N86-18537

CHIRAL DYNAMICS
Effective Lagrangian for the linear sigma model at m/sub sigma/ (YIELDS) infinity
[DE86-001328] N86-19086

CHLORIDES
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800

CHOLERA
Immunomodulation by proteins of bordetella pertussis
[AD-A160078] N86-18953

CHORDS (GEOMETRY)
On the longest chord of the first Muller profile
[VTH-M-486] N86-18303

CHROMIUM
Tribotechnical characteristics of ball bearing steel after chromizing N86-18531

CHROMIUM ALLOYS
Welding procedure specification: Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium-molybdenum
[DE86-001517] N86-18765

CHROMIUM CARBIDES
The application of chromium carbide to the surface of iron and steels
[BLL-M-36489-(5828.4)] N86-18477

CHROMOSPHERE
The energy balance in the solar chromosphere-corona transition zone N86-18835

CIRCADIAN RHYTHMS
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972

CIRCUIT BOARDS
Modeling crosstalk on printed circuit boards
[AD-A160657] N86-18626

CIRCUIT DIAGRAMS
Controlling production firing: The FCL language
[AD-A160423] N86-19026

CIRCULAR CYLINDERS
Wind-tunnel investigation of the pressure distribution and deduced characteristics of semi-circular cylinder in the vicinity of critical Reynolds number
[NAL-TR-871] N86-18288
Elastic buckling of thin-walled unstiffened circular cylinders under bending, axial compression and internal pressure
[ESDU-84006] N86-18744
Buckling of thin-walled unstiffened circular cylinders under torsion and pressure
[ESDU-84012] N86-18746

CIRCULAR WAVEGUIDES
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341

CIRCULATION
Recirculating electric air filter
[DE85-017751] N86-18632

CITIES
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597
Indianapolis technical innovation program: Program results N86-19266

CIVIL AVIATION
USSR report: Transportation
[JPRS-UTR-85-014] N86-18284
Calculation of the external nacelle surface for single and double stream jet engines for civil aircraft
[VTH-M-445] N86-18301
Aircraft accident reports: Brief formats, US civil and foreign aviation, issue number 1 of 1984 accidents
[PB85-916920] N86-18309
Aircraft accident reports: Brief format US Civil and Foreign Aviation, issue 2 of 1984 accidents
[PB85-916921] N86-18310
USSR report: Transportation
[JPRS-UTR-85-015] N86-18323
Sukhoy design bureau builds sport plane made of plastic N86-18324
Features of planned IL-96-300, IL-114 aircraft N86-18325

CLAMPS
Clamping and positioning system to be applied for the manufacturing of small and medium sized batches on Numerical Control (NC) machines
[KFK-PFT-95] N86-18740
CLASSICAL MECHANICS
Unification of quantum theory and classical physics
[DE86-000600] N86-19242
CLASSIFICATIONS
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports
[AD-A160409] N86-19256
CLEANING
Deburring of metal workpieces with directed high pressure water jets. Basis and application limits
[KFK-PFT-107] N86-18741
CLIMATE
The ERS-1 observations of lakes for climate research
N86-18385
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Hickam AFB, Hawaii
[AD-A159730] N86-18906
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Muir AAF, Harrisburg, Pennsylvania
[AD-A159731] N86-18907
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Kl Sawyer AFB, Michigan
[AD-A159732] N86-18908
U.S. Navy climatic study of the Caribbean Sea and Gulf of Mexico. Volume 1: West Caribbean Sea and Central American waters
[AD-A160159] N86-18917
Carbon dioxide and climate: Summaries of research in FY 1985
[DE86-000044] N86-18932
CLIMATOLOGY
Application of solar max ACRIM data to analyze solar-driven climatic variability on Earth
[NASA-CR-176483] N86-18890
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Catalog of air weather service technical documents
[AD-A159881] N86-18912
Convective cloud climatologies constructed from satellite imagery
[AD-A159969] N86-18914
Central American climatology
[AD-A159989] N86-18915
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
CLINICAL MEDICINE
Basics of searching MEDLINE: A guide for the health professional
[PB85-232650] N86-19262
CLOUD PHOTOGRAPHS
Convective cloud climatologies constructed from satellite imagery
[AD-A159969] N86-18914
CLOUD PHYSICS
Some microphysical processes affecting aircraft icing
[AD-A160375] N86-18921
CLOUDS
Dust Induced Electro-Magnetic Noise (DIEMN)
[AD-A160565] N86-18596
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-018490] N86-18931
CLOUDS (METEOROLOGY)
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
Some microphysical processes affecting aircraft icing
[AD-A160375] N86-18921
CLUMPS
Metal cluster topology: Applications to gold and platinum clusters
[AD-A160637] N86-18498
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
COASTAL CURRENTS
OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program interim report: The Airborne Ocean Thermal Structure Mapping Project
[AD-A160283] N86-18943
COASTAL WATER
Hydrographic data from the OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program: OPTOMA16, 20 May - 23 June 1985
[AD-A160270] N86-18942
COATINGS
Examples of the application of titanium nitride coatings on 6-5-2 steel tools for cutting steels with controlled inclusions
[BLL-RISLEY-TR-5221-(9091.9F)] N86-18487
USSR Report: Materials Science and Metallurgy
N86-18510
Influence of elastic-stress state created by coatings on the magnetic properties of the alloy Fe-3 percent Si
N86-18532
Improving performance of hard-alloy plates by thermomagnetic abrasion treatment N86-18539
Ceramic Technology for Advanced Heat Engines Project
[DE86-001365] N86-18568
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
The effects of hydrostatic pressure on optical fibers (fiscal year 1983 report)
[AD-A159915] N86-19191
CODING
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Performance evaluation of the JRS automatic microcode generating system
[AD-A159671] N86-19011
A cascaded coding scheme for error control
[NASA-CR-176513] N86-19062
Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports
[AD-A160409] N86-19256
COGNITION
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246
COHERENT RADIATION
Partially coherent X-rays from modern storage rings
[DE85-011157] N86-18724
COLLECTION
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
COLLISIONLESS PLASMAS
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
COLLISIONS
Calculation of H2O far-wing absorption within the single-perturber approximation
[AD-A160405] N86-19193
COLLOCATION
Collocation method for static and dynamic analysis of shells of revolution N86-18576
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
COLLOIDS
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
COLOR
Investigation of temperature dependence of growth rate of oxide films on tantalum by method of interference indication
[BLL-M-36385-(5828.4)] N86-18455
Polychromatic time-integrating optical processor for high-speed ambiguity processing
[AD-D011942] N86-19190
COMBUSTIBLE FLOW
Interaction effects in premixed turbulent combustion
[AD-A160077] N86-18464
COMBUSTION
A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068
COMBUSTION CHAMBERS
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646
COMBUSTION PHYSICS
Effects of curvature and dilution on unsteady, premixed, laminar flame propagation
[AD-A159934] N86-18461
COMBUSTION PRODUCTS
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571
Emission characterization of a 2-stroke heavy-duty diesel coach engine and vehicle with and without a particulate trap
[PB85-239770] N86-18742
COMMAND AND CONTROL
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links
[NASA-CR-176532] N86-18342
COMMAND MODULES
Space station common module power system network topology and hardware development
[NASA-CR-178587] N86-18348
COMMERCIAL AIRCRAFT
Features of planned IL-96-300, IL-114 aircraft
N86-18325
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449
COMMUNICATING
Communicating across barriers at home and abroad
[DE85-015729] N86-18603
COMMUNICATION
Reduction of the effects of the communication delays in scientific algorithms on message passing MIMD architectures
[NASA-CR-176044] N86-19010
COMMUNICATION NETWORKS
Minimizing the number of clusters in mobile packet radio networks
[AD-A160127] N86-18590
Saguaro: A distributed operating system based on pools of servicers
[AD-A160183] N86-18592
Access to inter-organization computer networks
[AD-A160855] N86-19051
COMMUNICATION SATELLITES
Bit error rate testing of a proof-of-concept model baseband processor
[NASA-TM-87206] N86-18343
An analysis of bi-directional use of frequencies for satellite communications
[NASA-TM-87226] N86-18585
COMPACTING
Theory for dynamic compaction of wet porous solids
[DE85-017596] N86-18578
COMPARISON
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links
[NASA-CR-176532] N86-18342
New measures of diversity
[AD-A160273] N86-19079
Comparisons between ultrasonic bulk shear wave velocities in textured steel with application to the measurement of residual stress
[AERE-R-11559] N86-19144
COMPATIBILITY
Ada (trade name) portability guidelines
[AD-A160390] N86-19027
COMPENSATORS
Construction of exponential Martingales for counting processes
[AD-A160189] N86-19104
COMPLEX SYSTEMS
Factors affecting manufacturing costs of complex systems, and the role of new technologies in reducing these costs
[DE85-018557] N86-19041
COMPOSITE MATERIALS
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
Three-dimensional stress singularities in anisotropic materials and composites
[AD-A160433] N86-18452
USSR Report: Materials Science and Metallurgy
N86-18510

Piezoelectric and electrostrictive materials for transducer applications
[AD-A160465] N86-18620

COMPOSITION (PROPERTY)
Evaluation of the fatigue strength of austenitic steels at temperatures of 293 and 77 K
[BLL-RISLEY-TR-5231-(9091.9F)] N86-18486

COMPRESSIBILITY
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470

COMPRESSIBLE FLOW
Compressible, unsteady lifting-surface theory for a helicopter rotor in forward flight
[NASA-TP-2503] N86-18289
Active control of compressible flows on a curved surface
[NASA-CR-178018] N86-18648

COMPRESSING
Deflection in tapered cantilever beams deflection (gap opening) in double cantilever type fracture toughness specimens
[AD-A159887] N86-18753
The effects of hydrostatic pressure on optical fibers (fiscal year 1983 report)
[AD-A159915] N86-19191

COMPRESSIVE STRENGTH
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734

COMPUTATION
Role of small computers in two-dimensional flow modeling
[AD-A159686] N86-18667
Generation of vertically incident seismograms
[AD-A159695] N86-18876
Multigrid method for nearly singular and slightly indefinite problems
[NASA-CR-178026] N86-18991
Factorization and reduction methods for optimal control of distributed parameter systems
[NASA-CR-178033] N86-18992
Partitioning and packing mathematical simulation models for calculation on parallel computers
[NASA-TM-87170] N86-19008
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
Parallel matrix computations
[AD-A160240] N86-19025
On structure determination for polynomial input-output differential systems
[AD-A160225] N86-19078
Computation of spherical harmonics and approximation by spherical harmonic expansions
[AD-A160445] N86-19083
Computing visible-surface representations
[AD-A160602] N86-19085
A methodology for computation reduction for specially structured large scale Markov decision problems
[AD-A159950] N86-19100

COMPUTATIONAL FLUID DYNAMICS
Full pseudospectral solution to the Euler equations of motion for airfoil flow at transonic speeds
[AD-A159714] N86-18293
PNS (Parabolized Navier-Stokes) computations for spinning and fin-stabilized projectiles at supersonic velocities
[AD-A160393] N86-18337
Computational fluid dynamics, volume 1 — conference
[VKI-LS-1985-04-VOL-1] N86-18652
Introduction to finite elements N86-18654
Finite element methods for non-Newtonian flows N86-18656
Advection-diffusion — finite element method N86-18657
Steady Euler simulations using unstructured meshes N86-18658
Computational fluid dynamics, volume 2 — conference
[VKI-LS-1985-04-VOL-2] N86-18660
Theory of spectral methods N86-18662
Application of spectral methods to compressible and incompressible fluid dynamics N86-18663
The concept of information in scientific computing — spectral approximation N86-18664
Fluid structural response of axially cracked cylinders
[TI85-016275] N86-18759
Accuracy of schemes for the Euler equations with non-uniform meshes
[NASA-CR-178038] N86-19066

COMPUTATIONAL GRIDS
Adaptive gridding in two dimensions for optimal accuracy and efficiency
[AD-A159943] N86-18670
Multigrid method for nearly singular and slightly indefinite problems
[NASA-CR-178026] N86-18991
Transformation of two and three-dimensional regions by elliptic systems
[NASA-CR-176476] N86-19063
Accuracy of schemes for the Euler equations with non-uniform meshes
[NASA-CR-178038] N86-19066
A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068

COMPUTER AIDED DESIGN
Modeling crosstalk on printed circuit boards
[AD-A160657] N86-18626
UW/NW (University of Washington/Northwest) VLSI Consortium
[AD-A160292] N86-18997
INGRID: A three-dimensional mesh generator for modeling nonlinear systems
[DE86-000749] N86-19005
Computer-aided design of robust decentralized controllers
[AD-A160118] N86-19017
An analytic process model for systems design and measurement
[AD-A160472] N86-19031
Factors affecting manufacturing costs of complex systems, and the role of new technologies in reducing these costs
[DE85-018557] N86-19041
An introduction to the application of Computer Aided Design (CAD) to the predesign of aircraft and the design of aircraft structures at the Aerospace Section
[VTH-M-512] N86-19045
Conversion of an IC design capability from a mainframe to a workstation environment
[DE85-015488] N86-19053

COMPUTER AIDED MANUFACTURING
Modeling crosstalk on printed circuit boards
[AD-A160657] N86-18626
Factors affecting manufacturing costs of complex systems, and the role of new technologies in reducing these costs
[DE85-018557] N86-19041

COMPUTER AIDED MAPPING
Line map production with Metric Camera data N86-18361

COMPUTER AIDED TOMOGRAPHY
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] N86-18978

COMPUTER ASSISTED INSTRUCTION
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246

COMPUTER DESIGN
The design and implementation of an operating system for the IBM personal computer
[AD-A160675] N86-19052

COMPUTER GRAPHICS
On the longest chord of the first Muller profile
[VTH-M-486] N86-18303
The development of automatic methods for handling SAR images over land N86-18354
Study of journal bearing dynamics using 3-dimensional motion picture graphics
[NASA-TM-87205] N86-18647
Program of research in computer vision, image processing and architectures for image processing
[AD-A160248] N86-18694
Final evaluation of the light pen as the key component in a microcomputer-based simulator
[AD-A160461] N86-18999
Research on computer architecture and logic design
[AD-A160598] N86-19000
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
INGRID: A three-dimensional mesh generator for modeling nonlinear systems
[DE86-000749] N86-19005
On using inverted trees for updating graph properties
[AD-A160135] N86-19019
A survey of public domain software for microcomputers
[AD-A160603] N86-19034
User's manual for Division 746's image processing system
[PB85-242394] N86-19046
Managing environmental projects with the aid of computers. Revision 1
[DE85-018290] N86-19250

COMPUTER NETWORKS
Computer system modelling using a commercial software package N86-19007
ANL user's guide to accessing the energy research Cray X-MP computer
[DE85-018558] N86-19042
Microprocessor local computer network evaluation
[AD-A159914] N86-19048
Access to inter-organization computer networks
[AD-A160855] N86-19051
Conversion of an IC design capability from a mainframe to a workstation environment
[DE85-015488] N86-19053

COMPUTER PROGRAMMING
Users guide for normal mode objective analysis of global data assimilation
[AD-A160373] N86-18998
INGRID: A three-dimensional mesh generator for modeling nonlinear systems
[DE86-000749] N86-19005
Some properties of n-dimensional triangulations
[NASA-CR-176535] N86-19009
On the integration of logic programming and functional programming
[AD-A159751] N86-19013
Replication and fault-tolerance in the ISIS system, revised
[AD-A160039] N86-19016
Quantitative evaluation of software methodology
[NASA-CR-176522] N86-19022
Debugging in a parallel environment
[DE85-010775] N86-19040
FRED: A program development tool
[DE86-000857] N86-19043
Conversion of an IC design capability from a mainframe to a workstation environment
[DE85-015488] N86-19053

COMPUTER PROGRAMS
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336
Estimation of r.m.s. strain in laminated skin panels subject to random acoustic loading
[ESDU-84008-A] N86-18745
Finite element mesh for a complete solution of a problem with a singularity
[AD-A159890] N86-18754
Sunrise/sunset
[PB85-239929] N86-18888
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
INGRID: A three-dimensional mesh generator for modeling nonlinear systems
[DE86-000749] N86-19005
Computer system modelling using a commercial software package N86-19007
Some properties of n-dimensional triangulations
[NASA-CR-176535] N86-19009
Performance evaluation of the JRS automatic microcode generating system
[AD-A159671] N86-19011
Algorithmic study on systolic array structures
[AD-A160006] N86-19014
Development of an accurate algorithm for EXP(Bt) Appendix
[AD-A160121] N86-19017
Comparing the effectiveness of software testing strategies
[NASA-CR-176511] N86-19022
Quantitative evaluation of software methodology
[NASA-CR-176522] N86-19022
Parallel matrix computations
[AD-A160240] N86-19025
Ada (trade name) portability gudelines
[AD-A160390] N86-19031
A survey of public domain software for microcomputers
[AD-A160603] N86-19034
FRED: A program development tool
[DE86-000857] N86-19043

User's manual for Division 746's image processing system
[PB85-242394] N86-19046
Conversion of an IC design capability from a mainframe to a workstation environment
[DE85-015488] N86-19053
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057
A cascaded coding scheme for error control
[NASA-CR-176513] N86-19062
Vectorization of diffusion computations in the presence of periodic boundary conditions
[DE85-017631] N86-19087
The SURE Reliability Analysis Program
[NASA-TM-87593] N86-19096
Development of performance assessment methodology for nuclear waste isolation in geologic media
[TI85-017813] N86-19167
Managing environmental projects with the aid of computers. Revision 1
[DE85-016290] N86-19250

COMPUTER STORAGE DEVICES
Beyond associations: Strategic components in memory retrieval
[AD-A160783] N86-18985

COMPUTER SYSTEMS DESIGN
Snow mapping from LANDSAT imagery N86-18381
Status of the Fundamental Astronomy by Space Techniques (FAST) data processing chain N86-18392
Development and implementation of an MC68000/VME microcomputer for payload support systems N86-18864

COMPUTER SYSTEMS PERFORMANCE
Development of an accurate algorithm for EXP(Bt): Appendix
[AD-A160121] N86-19018

COMPUTER TECHNIQUES
Automated ion chromatography
[AD-A159764] N86-18460
Reliability evaluation of fault-tolerant multiprocessor systems
[AD-A160234] N86-18996
Replication and fault-tolerance in the ISIS system, revised
[AD-A160039] N86-19016
Computer-aided design of robust decentralized controllers
[AD-A160118] N86-19017
Controlling production firing: The FCL language
[AD-A160423] N86-19028
Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029
Guidelines for a minimal Ada Runtime Environment
[AD-A160451] N86-19030
An analytic process model for systems design and measurement
[AD-A160472] N86-19031
Automating sensitivity analysis of computer models using computer calculus
[DE85-018095] N86-19039
New method for estimating isotopic ratios from pulse-counting mass spectrometric data
[DE86-000095] N86-19044
Automatic processing of Navy message narrative
[AD-A159670] N86-19056
Transformation of two and three-dimensional regions by elliptic systems
[NASA-CR-176476] N86-19063
Vectorization of diffusion computations in the presence of periodic boundary conditions
[DE85-017631] N86-19087
Design, construction and initial application of a low-light-level imaging detector N86-19189

COMPUTER VISION
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314

COMPUTERIZED SIMULATION
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
Parametric determination of lift interference for three-dimensional models in the Emmen (Switzerland) aircraft works wind tunnel
[F+W-FO-1740] N86-18304
Development and application of dynamic simulations of a subsonic wind tunnel
[NASA-TM-87211] N86-18338
Optimizing the input Catalog through simulations --- HIPPARCOS N86-18399
The HIPPARCOS Input Catalog (INCA). Simulation of observations over a long period N86-18402
Optimizing the observing strategy through simulations --- HIPPARCOS N86-18403
Effects of arsenic doping on the solidification dynamics of pulsed laser melted silicon
[DE85-006107] N86-18564
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571
Computational fluid dynamics, volume 1 --- conference
[VKI-LS-1985-04-VOL-1] N86-18652
Finite element calculation of generalized Newtonian flow N86-18655
Steady Euler simulations using unstructured meshes N86-18659
Mesh refinement analysis of the flow of a Maxwell fluid through an abrupt contraction
[DE85-012230] N86-18665
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
One-dimensional model for mud flows
[AD-A159921] N86-18669
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
A computer program to model the Cn2 optical turbulence characteristics of a given atmosphere, its conversion to IBM FORTRAN and utilization
[AD-A159762] N86-18911
The operational meteorology of convective weather. Volume 2: Storm scale analysis
[AD-A159919] N86-18913
Partitioning and packing mathematical simulation models for calculation on parallel computers
[NASA-TM-87170] N86-19008
Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029
Scan line difference compression algorithm simulation study
[AD-A160846] N86-19036
Simulation and evaluation of the AT and T proposed pattern recognition algorithm for group 4 facsimile
[AD-A160864] N86-19037
Automating sensitivity analysis of computer models using computer calculus
[DE85-018095] N86-19039
Microprocessor local computer network evaluation
[AD-A159914] N86-19048
Design of the NSLS infrared beam line mirror no. 1
[DE85-018481] N86-19198
Simulations of fusion plasmas by A 3-D, E-M particle code
[DE85-008642] N86-19214

COMPUTERS
Development and design of an advanced directional shear
[AD-A159647] N86-18751
A garbage collector for a large distributed address space
[AD-A160645] N86-19035
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050
Distributed architecture and fast parallel algorithms in real-time robot control N86-19055

CONCENTRATION (COMPOSITION)
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801

CONCRETES
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734

CONDENSERS (LIQUEFIERS)
Double wall artery heat pipe
[AD-A160012] N86-18671

CONDUCTION BANDS
Electron irradiation of p-type mercury cadmium telluride
[AD-A159737] N86-18612

CONDUCTIVE HEAT TRANSFER
Double wall artery heat pipe
[AD-A160012] N86-18671
Thermal conductance of metallic interface in vacuum
[DE85-017860] N86-18680

CONDUCTORS
Studies of structure and transport in quasi-one dimensional conductors N86-19226

CONFERENCES
Proceedings of the EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications
[ESA-SP-233] N86-18351
The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation --- conferences
[ESA-SP-234] N86-18388
Computational fluid dynamics, volume 1 --- conference
[VKI-LS-1985-04-VOL-1] N86-18652
Computational fluid dynamics, volume 2 --- conference
[VKI-LS-1985-04-VOL-2] N86-18660
Workshop on Fundamental Research Issues in Orifice Metering
[PB85-226260] N86-18683
The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research
[ESA-SP-229] N86-18811
Annual Gaseous Electronics Conference (37th): Program and abstracts
[AD-A159928] N86-19147
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques, 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239

CONFIDENCE LIMITS
An equation for one-sided tolerance limits for normal distributions
[AD-A159831] N86-19097
Assessing system reliability using censoring methodology
[AD-A160616] N86-19115

CONFORMAL MAPPING
The conformal representation of the NACA 642A015 profile
[VTH-M-502] N86-18296
On the interpolation method of Schoenberg and the calculation of profile coordinates
[VTH-M-452] N86-18302
On the longest chord of the first Muller profile
[VTH-M-486] N86-18303

CONIFERS
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766

CONSERVATION LAWS
The numerical viscosity of entropy stable schemes for systems of conservation laws
[NASA-CR-178021] N86-19065

CONSISTENCY
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080
The strong consistency of error probability estimates in NN discrimination
[AD-A160016] N86-19101

CONSTRAINTS
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306

CONSTRUCTION
Irreplaceable metal N86-18530
Summary of tower designs for large horizontal axis wind turbines
[NASA-TM-87166] N86-18776

CONTAMINATION
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801

CONTINUOUS WAVE LASERS
Transverse flow CW atomic iodine laser system
[AD-D011933] N86-18708

CONTOURS
Active control of compressible flows on a curved surface
[NASA-CR-178018] N86-18648
Central American climatology
[AD-A159989] N86-18915

CONTRACTION
Mesh refinement analysis of the flow of a Maxwell fluid through an abrupt contraction
[DE85-012230] N86-18665

CONTROL EQUIPMENT
Tevatron extraction microcomputer
[DE85-016985] N86-19170

CONTROL STABILITY
Hypothesis integration in image understanding systems
[NASA-CR-176510] N86-19692

CONTROL SURFACES
Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321

CONTROL SYSTEMS DESIGN
Two generations of microcomputer-based program units for sounding rocket attitude control systems
N86-18865
The Saab spinning rocket attitude control (SPINRAC): An attitude control system for obtaining low impact dispersion
N86-18866
Controlling production firing: The FCL language
[AD-A160423] N86-19028
CONTROL THEORY
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19108
CONTROL VALVES
Modular air shut-off valve
[AD-D011935] N86-18728
Servo operated anti-G suit pressurization system
[AD-D011932] N86-18968
CONTROLLERS
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Random timer
[AD-D011937] N86-18687
Modular air shut-off valve
[AD-D011935] N86-18728
A robust layered control system for a mobile robot
[AD-A160833] N86-18736
CONVECTION
Weather Research Program
[PB85-248940] N86-18936
CONVECTION CLOUDS
Convective cloud climatologies constructed from satellite imagery
[AD-A159969] N86-18914
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18930
CONVECTIVE FLOW
Electrocrystallization in microgravity
[NASA-TM-87202] N86-19274
Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars
[NASA-CR-176470] N86-19275
The detection of global convective wave flows on the Sun
N86-19276
CONVECTIVE HEAT TRANSFER
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646
CONVERGENCE
A survey of properties of relations which have the confluence property
[AD-A159673] N86-19012
Convergence to steady state of solutions of Burgers' equation
[NASA-CR-178017] N86-19064
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080
A methodology for computation reduction for specially structured large scale Markov decision problems
[AD-A159950] N86-19100
The strong consistency of error probability estimates in NN discrimination
[AD-A160016] N86-19101
COOLING
Double wall artery heat pipe
[AD-A160012] N86-18671
Effects of inflow conditions on discrete frequency noise generated by small, axial flow fans
[AD-A160579] N86-19135
COORDINATES
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
COPOLYMERS
Block copolymers of isotactic polypropylene and 1,4 polybutadiene
[AD-A160147] N86-18547
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
COPPER
Characterization of multilayer Cu films on Ru(0001)
[DE86-000861] N86-18508
Deformation of Al-Cu powder bodies during liquid-phase sintering
N86-18538
COPPER ALLOYS
Self-consistent electronic structure of alpha-phase Hume Rothery electron compound alloys Cu sub c Zn sub1-c, Cu sub cGa sub1-c, and Cu sub c Ge sub1-c
[DE85-017560] N86-19234
COPPER CHLORIDES
Graphite fiber intercalation: Basic properties of copper chloride intercalated fibers
[NASA-TM-87217] N86-18442
CORES
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
CORIOLIS EFFECT
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
CORN
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
CORONAL HOLES
Solar coronal holes observed with the Nancay (France) meter radioheliograph
N86-18869
CORRELATION
Correlation analysis of the Taurus molecular cloud complex
N86-19272
CORRELATION DETECTION
Application of solar max ACRIM data to analyze solar-driven climatic variability on Earth
[NASA-CR-176483] N86-18890
CORROSION
Corrosion resistant materials in MCFC environment
[DE85-017808] N86-18503
USSR Report: Materials Science and Metallurgy
N86-18510
Tribotechnical characteristics of ball bearing steel after chromizing
N86-18531
CORROSION PREVENTION
Effect of inhibitors on electrochemical conditions during tests of specimens of 40 Kh steel for static corrosion cracking resistance
N86-18526
CORROSION RESISTANCE
Prospects for developing a technology for producing corrosion resistant steel
[BLL-M-36460-(5828.4)] N86-18478
Corrosion resistant materials in MCFC environment
[DE85-017808] N86-18503
Influence of stress concentration on fatigue and corrosion-fatigue properties of VAL10 aluminum casting alloy and AK6 aluminum forging alloy
N86-18513
Corrosion resistance of joints made by diffusion welding
N86-18522
Increasing the corrosion resistance of welded joints in A85 aluminum
N86-18523
Effect of medium pH on hydrogen permeability of passivating films and rate of growth of corrosion cracks in 40KhN steel
N86-18524
Effect of inhibitors on electrochemical conditions during tests of specimens of 40 Kh steel for static corrosion cracking resistance
N86-18526
CORROSION TESTS
Study of crack resistance of corrosion-resistant glass-reinforced plastics by acoustical emission methods
N86-18516
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755
CORTICOSTEROIDS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
COSMIC RAYS
A stochastic model for particle impingements on orbiting spacecraft
[NASA-TP-2550] N86-19095
COSMIC X RAYS
The hard X-ray burst spectrometer event listing, 1980 - 1985
[NASA-TM-86236] N86-19279
COST ANALYSIS
Cadmium zinc sulfide/copper indium diselenide module design and cost assessment
[DE85-016854] N86-18509
Summary of tower designs for large horizontal axis wind turbines
[NASA-TM-87166] N86-18778
COST EFFECTIVENESS
The science of and advanced technology for cost-effective manufacture of high precision engineering products. Volume 2: Mechanics of two axes passive precision level monitor for machine tools
[AD-A160140] N86-18731
A performance measurement methodology for software multiple-backend database systems
[AD-A160284] N86-19026
COST ESTIMATES
Amorphous silicon conceptual module design and cost estimate
[DE85-012177] N86-18787
COST REDUCTION
Factors affecting manufacturing costs of complex systems, and the role of new technologies in reducing these costs
[DE85-018557] N86-19041
COSTS
A survey of public domain software for microcomputers
[AD-A160603] N86-19034
COUNTING
Real time: Automatic vehicle potential determination from ESA measurements. Part 1. The count ratio algorithm
[AD-A160459] N86-18435
Construction of exponential Martingales for counting processes
[AD-A160189] N86-19104
COUPLING
Effects of blade-to-blade dissimilarities on rotor-body lead-lag dynamics
[AD-A160497] N86-18317
Coupling between eddy currents and rigid body rotation: Analysis, computation, and experiments
[DE85-013877] N86-18604
Phenomenology of electromagnetic coupling, part 2
[DE86-000838] N86-18642
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160185] N86-19120
Intramolecular coupling in metal-free binuclear phthalocyanines
[AD-A160784] N86-19154
COVARIANCE
Inference for stationary random fields given Poisson samples
[AD-A160191] N86-19106
Principal component analysis under correlated multivariate regression equations model
[AD-A160266] N86-19109
Covariate measurement error in logistic regression
[AD-A160277] N86-19111
CRACK INITIATION
Study of crack resistance of corrosion-resistant glass-reinforced plastics by acoustical emission methods
N86-18516
Cracking resistance of polycarbonate and polymethylmethacrylate at high loading rates
N86-18528
Life extension of components with high cumulative fatigue usage
[TI85-014631] N86-18758
CRACK PROPAGATION
Effectiveness of fatigue life enhancing fasteners in the design and rework of aircraft structures
[AD-A159676] N86-1831
Interactive effects of high- and low-frequency loading on fatigue
[AD-A160601] N86-1831
Effects of micro-alloying on the fatigue crack resistanc of structural steel
[BLL-M-36488-(5828.4)] N86-1847
Study of crack resistance of corrosion-resistar glass-reinforced plastics by acoustical emission method
N86-1851
Fracto-emission from polymers
[AD-A160510] N86-185
Degradation of beta'' alumina electrolytes
[DE85-015300] N86-18
Estimating the R-curve from residual strength da
[NASA-TM-87182] N86-187
Development of fatigue and crack propagation desi and analysis methodology in a corrosive environment typical mechanically-fastened joints. Volume 3: Pha 2 documentation
[AD-A160378] N86-187
Life extension of components with high cumulat fatigue usage
[TI85-014631] N86-18

Fluid structural response of axially cracked cylinders
[TI85-016275] N86-18759
Neutron diffraction methods for the study of residual stress fields
[AERE-R-11630] N86-19240
CRACKING (FRACTURING)
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755
CRASHWORTHINESS
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
CRAY COMPUTERS
ANL user's guide to accessing the energy research Cray X-MP computer
[DE85-018558] N86-19042
CREEP ANALYSIS
Comparative creep analysis of unidirectionally oriented composite materials with various kinds of reinforced fibers N86-18520
CROP INVENTORIES
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597
CROSS CORRELATION
Turbulence characteristics as determined by cross correlation analysis --- atmospheric turbulence N86-18854
CROSSLINKING
Viscosity rise during free radical crosslinking polymerization with inhibition
[AD-A159842] N86-18444
CROSSTALK
Modeling crosstalk on printed circuit boards
[AD-A160657] N86-18626
CRUSTAL FRACTURES
Monitoring of ground fractures caused by volcanic eruptions using remote sensing techniques N86-18383
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
CRYOCYCLE PRINCIPLE
Improved cycling cryopump
[DE85-017732] N86-18738
CRYOGENIC COOLING
Improved cycling cryopump
[DE85-017732] N86-18738
CRYOGENIC GYROSCOPES
The 3He nuclear gyroscope
[AD-A159924] N86-18690
CRYOGENIC MAGNETS
Forces on neutral atoms due to electromagnetic fields
[AD-A160719] N86-19151
CRYOPUMPING
Improved cycling cryopump
[DE85-017732] N86-18738
CRYSTAL DEFECTS
Effect of hydrostatic pressure on defect annealing in semiconductors
[DE85-015149] N86-19235
CRYSTAL GROWTH
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
Crystal growth furnace developed for floating zone experiments in sounding rockets N86-18836
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237
Electrocrystallization in microgravity
[NASA-TM-87202] N86-19274
CRYSTAL STRUCTURE
Studies of structure and transport in quasi-one dimensional conductors N86-19226
Geometric structure and surface vibrational resonances: The BCC fe(3) surface
[AD-A159916] N86-19231
CRYSTAL SURFACES
Helium scattering studies of the surface structure and dynamics of rare gas crystals
[AD-A159942] N86-19232
CRYSTALLINITY
Southeastern Regional geologic characterization report: Volume 1
[DE86-000409] N86-18886
Studies of structure and transport in quasi-one dimensional conductors N86-19226
CRYSTALLITES
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
CRYSTALLIZATION
Electrocrystallization in microgravity
[NASA-TM-87202] N86-19274
CRYSTALLOGRAPHY
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
CRYSTALS
Polymer electrolyte based on poly(ethylene imine) and lithium salts
[AD-A160381] N86-18779
CULTURE TECHNIQUES
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] N86-18968
CURING
The effect of barrier coatings on the cure rate and fluid resistance of polysulphide sealants
[AD-A160728] N86-18561
CURRENT DENSITY
Noninterceptive beam diagnostics
[DE86-000791] N86-19176
CUTTING
Examples of the application of titanium nitride coatings on 6-5-2 steel tools for cutting steels with controlled inclusions
[BLL-RISLEY-TR-5221-(9091.9F)] N86-18487
CYANOGEN
Production of CN (A2pi i) in the photolysis of acetonitrile at 158 nm
[AD-A160175] N86-18445
CYCLIC LOADS
Evaluation of the fatigue strength of austenitic steels at temperatures of 293 and 77 K
[BLL-RISLEY-TR-5231-(9091.9F)] N86-18486
Deformation and variable loading of metal-polymer two-layer plates N86-18518
CYCLOTRON RESONANCE
Triply differential studies of atomic and molecular photoionization using synchrotron radiation
[AD-A160587] N86-19150
CYCLOTRONS
Cyclotron-based nuclear science
[DE85-017620] N86-19220
CYGNUS CONSTELLATION
The Cygnus loop supernova remnant: New observations and a framework for understanding its structure and evolution N86-19273
CYLINDRICAL BODIES
Fluid structural response of axially cracked cylinders
[TI85-016275] N86-18759
CYLINDRICAL SHELLS
Sound transmission into shells doubly excited by incident waves and by arbitrary surface forcing functions
[AD-A159936] N86-19131
CYTOLOGY
Rapid identification of micro-organisms
[AD-A159945] N86-18952

D

D REGION
The MAP/WINE electron density profiles in the D and E regions: A comparison of EISCAT, PRE rocket data N86-18855
DAMAGE
Effectiveness of fatigue life enhancing fasteners in the design and rework of aircraft structures
[AD-A159676] N86-18316
An application of the Perron-Frobenius theorem to a damage model problem
[AD-A160208] N86-19075
DAMAGE ASSESSMENT
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713
Laser physics and laser techniques
[AD-A160143] N86-18714
An extension of Spitzer's integral representation theorem with an application
[AD-A160184] N86-19072
DAMPING
Dynamic analysis of systems having large damping variations
[TI85-012190] N86-18757
DATA ACQUISITION
Proceedings of the EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications
[ESA-SP-233] N86-18351
Low-cost microprocessor controlled shadowband radiometer
[DE85-016614] N86-18702
Catalog of air weather service technical documents
[AD-A159881] N86-18912
Structured exit interviews using MDS (Multidimensional scaling)
[AD-A160469] N86-19247
Why bother with experiments?
[AD-A160634] N86-19248
DATA BASE MANAGEMENT SYSTEMS
A performance measurement methodology for software multiple-backend database systems
[AD-A160284] N86-19026
NCSMEMO, an IBM PC program using dBASE 3 to cross-reference letters
[DE85-018210] N86-19038
Conceptual design of a data base for numerical simulator
[NAL-TR-869] N86-19047
Managing environmental projects with the aid of computers. Revision 1
[DE85-018290] N86-19250
Entity-based data base management systems N86-19253
A comparison of multi-key file structures and associtive retrieval algorithms for database applications N86-19254
DATA BASES
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
The Stellar Data Center (CDS) and HIPPARCOS: Afterthoughts N86-18393
Presentation of the astronomical data base Set of Identifications, Measurements, and Bibliography for Astronomical Data (SIMBAD) N86-18394
Present status of the Input Catalog --- HIPPARCOS mission N86-18395
The INCA data base: Sub-base from Set of Identifications, Measurements and Bibliography for Astronomical Data (SIMBAD) --- HIPPARCOS N86-18396
NCSMEMO, an IBM PC program using dBASE 3 to cross-reference letters
[DE85-018210] N86-19038
Conceptual design of a data base for numerical simulator
[NAL-TR-869] N86-19047
A mechanism for natural language database N86-19252
Entity-based data base management systems N86-19253
International Energy R and D represented in the Energy Data Base, 1984
[DE85-016029] N86-19259
Basics of searching MEDLINE: A guide for the health professional
[PB85-232650] N86-19262
Planetary image conversion task
[NASA-CR-176534] N86-19267
DATA COMPRESSION
Data compression techniques for remote sensing data handling N86-18355
Scan line difference compression algorithm simulation study
[AD-A160846] N86-19036
Simulation and evaluation of the AT and T proposed pattern recognition algorithm for group 4 facsimile
[AD-A160864] N86-19037
DATA LINKS
The effects of hydrostatic pressure on optical fibers (fiscal year 1983 report)
[AD-A159915] N86-19191
DATA PROCESSING
A radar altimeter and the validation of its data products over ice surfaces N86-18352
Status of the Fundamental Astronomy by Space Techniques (FAST) data processing chain N86-18392
Overview of TYCHO data analysis --- HIPPARCOS N86-18427
A statistical gravity model for northern Texas
[AD-A160474] N86-18883
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
Multimodal versus unimodal information processing of words
[AD-A160517] N86-18984
Users guide for normal mode objective analysis of global data assimilation
[AD-A160373] N86-18998
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001

Fast Fourier Transform (FFT) subroutine for determining frequency response data for digital simulations
[AD-A160546] N86-19033
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246
Structured exit interviews using MDS (Multidimensional scaling)
[AD-A160469] N86-19247
Planetary image conversion task
[NASA-CR-176534] N86-19267

DATA PROCESSING EQUIPMENT
On the optimality of data processors for signal detection over a class of contaminated noises
[AD-A160213] N86-18617

DATA RECORDING
A digital microbarograph system
[AD-A160914] N86-18701
Beam addressed memory system
[AD-D011930] N86-18993

DATA REDUCTION
Data compression techniques for remote sensing data handling N86-18355
The HIPPARCOS data reductions: Principles and limitations N86-18391
Overview of TYCHO data analysis --- HIPPARCOS N86-18427
Text compression using word tokenization
[DE86-000832] N86-19260
Comments on techniques for spectral deconvolution N86-19278

DATA STORAGE
Beam addressed memory system
[AD-D011930] N86-18993

DATA STRUCTURES
A comparison of multi-key file structures and associtive retrieval algorithms for database applications N86-19254

DATA TRANSMISSION
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
Text compression using word tokenization
[DE86-000832] N86-19260

DAWN CHORUS
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone
[KGI-PREPRINT-081] N86-19208

DECISION MAKING
The European LFM-style forecast aids
[AD-A160166] N86-18918
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057
A methodology for computation reduction for specially structured large scale Markov decision problems
[AD-A159950] N86-19100
Indianapolis technical innovation program: Program results N86-19266

DECODING
A cascaded coding scheme for error control
[NASA-CR-176513] N86-19062

DECOMPOSITION
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160185] N86-19120

DECONTAMINATION
Temporal stability of oxidizer solutions: A survey of candidate decon materials in seawater
[AD-A159734] N86-18457
Temporal stability of solid oxidizers at high temperature and humidity
[AD-A159735] N86-18458

DEEP SPACE
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links
[NASA-CR-176532] N86-18342

DEFECTS
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141

DEFLECTION
Deflection in tapered cantilever beams deflection (gap opening) in double cantilever type fracture toughness specimens
[AD-A159887] N86-18753

DEFORMATION
Properties of carbon-glass plastic material under pure flexure N86-18519
Role of martensite conversion in hydrogen embrittlement of unstable austenite steels N86-18525
Photon emission in deformation and failure of metals N86-18527
Effect of hardening treatments on microfluidity of steels and bronzes N86-18529
Deformation of Al-Cu powder bodies during liquid-phase sintering N86-18538
Information-measurement system for ultrasonic testing of welded joints N86-18542
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19106

DEGRADATION
CRRES/SPACERAD (combined release and radiation effects satellite/space radiation effects program) experiment descriptions
[AD-A160504] N86-18350
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233

DELAY
Reduction of the effects of the communication delays in scientific algorithms on message passing MIMD architectures
[NASA-CR-178044] N86-19010

DELTA FUNCTION
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673

DENSIFICATION
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493

DENSITY
The amount of noise inherent in bandwidth selection for a kernel density estimator
[AD-A160235] N86-19107

DENSITY (MASS/VOLUME)
Preparation of mica glass-ceramics by crystallization of fluorphlogopite-fluormuscovite glass N86-18577
Correlation analysis of the Taurus molecular cloud complex N86-19272

DENSITY DISTRIBUTION
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141

DENSITY MEASUREMENT
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18864

DEOXYRIBONUCLEIC ACID
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] N86-18968

DEPENDENT VARIABLES
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110

DEPOLARIZATION
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929

DEPOSITION
Research progress in the DOE/SERI Amorphous Silicon Research Project
[DE85-006796] N86-18786
Practical aspects of measuring dry deposition
[DE85-018465] N86-18802
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233

DEPTH
Toward a surface sketch
[AD-A159693] N86-18767
Geologic structure of the surficial aquifer system underlying Everglades National Park and Big Cypress National Preserve
[PB85-247609] N86-18772

DESIGN
Silver/glass mirrors for solar thermal systems
[DE85-000537] N86-18785

DESIGN ANALYSIS
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
Cadmium zinc sulfide/copper indium diselenide module design and cost assessment
[DE85-016854] N86-18509
Optimization of mechanisms for force generation by using pulleys and spring
[AD-A159944] N86-18730
Development and design of an advanced directional shear
[AD-A159647] N86-18751
Onsite 40-kilowatt fuel cell power plant manufacturing and field test program
[NASA-CR-174988] N86-18773
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18796
Conceptual design of a data base for numerical simulator
[NAL-TR-869] N86-19047
The design and implementation of an operating system for the IBM personal computer
[AD-A160875] N86-19052
Design and testing of hardware improvements of an acoustic sounder
[AD-A159672] N86-19128
A superconducting heavy ion injector linac
[DE85-013897] N86-19156
Heat pipe space nuclear reactor design assessment, Volume 1: Design status of the SP-100 heat pipe space nuclear reactor system
[AD-A160279] N86-19164
An estimate of the contributions of bellows to the impedances and beam instabilities of the SSC
[DE85-017363] N86-19169
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171
Design of the NSLS infrared beam line mirror no. 1
[DE85-018481] N86-19198

DESULFURIZING
Development of combined nitrogen oxide/sulfur oxide environmental-control technology
[DE86-001301] N86-19804

DESYNCHRONIZATION (BIOLOGY)
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18872

DETECTION
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718
In-flight turbulence detection
[AD-A160380] N86-18692
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19067
Spectrally selective shutter mechanism
[AD-A160619] N86-19118

DETECTORS
An optical waveguide humidity detector
[AD-A160577] N86-18681

DETONATION WAVES
A digital microbarograph system
[AD-A160914] N86-18701

DEUTERIUM
Complex molecular motions in bulk hard segments of polyurethanes: A deuterium NMR study
[AD-A159760] N86-184
Deuterated polymers: Chemical and physical properties and future prospects
[AD-A160762] N86-18[illegible]
If you like low P/sub T/ multiparticle physics, you'll like nucleus-nucleus interactions or Do E/sub T/ distributions obey KNO scaling in high energy pp and nucleus-nucleus collisions
[DE86-000633] N86-19[illegible]

DIAGNOSIS
Controlling production firing: The FCL language
[AD-A160423] N86-19[illegible]

DIAMONDS
Effect of graphite cocrystallization growth of diamond single crystals in metal-carbon system N86-19[illegible]

DICHLORIDES
Vapor pressure of methylphosphonic dichloride compendium
[AD-A160613] N86-19[illegible]

DIELECTRIC PROPERTIES
Dielectric analysis of thermoset cure
[AD-A160291] N86-18551
Optical functions of silicon at elevated temperatures determined by polarization modulation ellipsometry
[DE86-001427] N86-19201
DIELECTRICS
Propagation of electromagnetic waves in two dimensionally periodic media N86-18580
Plane wave scattering by thin linear dielectric-coated wires and dielectric strips: A moment method approach with physical basis functions N86-18581
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713
DIESEL ENGINES
Ceramic Technology for Advanced Heat Engines Project
[DE86-001365] N86-18568
Emission characterization of a 2-stroke heavy-duty diesel coach engine and vehicle with and without a particulate trap
[PB85-239770] N86-18742
DIESEL FUELS
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] N86-18962
DIFFERENTIAL EQUATIONS
Multigrid method for nearly singular and slightly indefinite problems
[NASA-CR-178026] N86-18991
On structure determination for polynomial input-output differential systems
[AD-A160225] N86-19078
DIFFRACTION
Matched asymptotic expansions to similarity solutions of shock diffraction
[NASA-CR-178022] N86-18649
Evaluation techniques for X-ray mirrors and systems using visible light
[DE86-001206] N86-19199
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques, 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239
DIFFUSION
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646
Fingering patterns in Hele-Shaw flow
[DE85-014952] N86-18679
DIFFUSION THEORY
Advection-diffusion --- finite element method N86-18657
DIFFUSION WELDING
Corrosion resistance of joints made by diffusion welding N86-18522
Production of vacuum-tight joints in materials by diffusion welding N86-18543
DIGITAL COMMAND SYSTEMS
Clamping and positioning system to be applied for the manufacturing of small and medium sized batches on Numerical Control (NC) machines
[KFK-PFT-95] N86-18710
DIGITAL SIMULATION
Frequency domain non-linear signal processing apparatus and method for discrimination against non-Gaussian interference
[AD-D011931] N86-18584
Fast Fourier Transform (FFT) subroutine for determining frequency response data for digital simulations
[AD-A160546] N86-19033
DIGITAL SYSTEMS
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
A digital microbarograph system
[AD-A160914] N86-18701
Beam addressed memory system
[AD-D011930] N86-18993
Digital signal processing
[AD-A159889] N86-18994
Operation Manual CORRTEX 3 Recorder
[DE85-014872] N86-19004
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137
Planetary image conversion task
[NASA-CR-176534] N86-19267
DIGITAL TECHNIQUES
Digital audio editing
[BBC-RD-1985/10] N86-18583
Digital phase-locked loop speed control for a brushless dc motor
[AD-A159977] N86-18614
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137
DILUTION
Effects of curvature and dilution on unsteady, premixed, laminar flame propagation
[AD-A159934] N86-18461
DIMENSIONAL STABILITY
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336
DIMENSIONS
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117
DIMERS
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956
DIODES
Surface infrared reflection-absorption spectroscopy using a tunable diode laser
[AD-A160145] N86-18715
DIRECT CURRENT
Digital phase-locked loop speed control for a brushless dc motor
[AD-A159977] N86-18614
DIRECTIONAL CONTROL
Development and design of an advanced directional sinar
[AD-A159647] N86-18751
DIRECTORIES
Resource directory of DOE information organizations, revision 2
[DE84-015655] N86-19258
DISCRETE FUNCTIONS
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
Characterization of discrete probability distributions by partial independence
[AD-A160130] N86-19103
Multiple beamforming
[AD-A159979] N86-19132
DISEASES
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
Review of duodenal and gastric ulcer
[AD-A160919] N86-18977
DISKS (SHAPES)
Two-dimensional Helmholtz flow about a flat plate and related shapes
[AD-A160806] N86-18295
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
DISLOCATIONS (MATERIALS)
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
DISPERSING
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
DISPERSIONS
Materials science research in rockets, especially in the fields of fluid physics and of metallic dispersions N86-18835
DISPLACEMENT
Analog inclination data system
[AD-D011940] N86-18688
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159882] N86-18752
Finite element mesh for a complete solution of a problem with a singularity
[AD-A159890] N86-18754
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810
DISPLAY DEVICES
The effects of vocal versus manual response modalities on multi-task performance
[AD-A159830] N86-18588
Final evaluation of the light pen as the key component in a microcomputer-based simulator
[AD-A160461] N86-18995
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160805] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
An analysis of stimulus determinants of target detection in PBB (Passive broadband) displays
[AD-A160203] N86-19134
DISTORTION
Distortion of He emission lines after fast-ion collisions
[DE85-018347] N86-19161
DISTRIBUTED PARAMETER SYSTEMS
Factorization and reduction methods for optimal control of distributed parameter systems
[NASA-CR-178033] N86-18992
DISTRIBUTED PROCESSING
Adapting a Navier-Stokes code to the ICL-DAP
[NASA-CR-178034] N86-18651
Replication and fault-tolerance in the ISIS system, revised
[AD-A160039] N86-19016
Foundations of knowledge for distributed systems
[AD-A160233] N86-19024
A performance measurement methodology for software multiple-backend database systems
[AD-A160284] N86-19026
A garbage collector for a large distributed address space
[AD-A160645] N86-19035
Structural properties of randomized times
[AD-A160214] N86-19077
Distributed sensor networks
[AD-A160596] N86-19136
DISTRIBUTION FUNCTIONS
On the optimality of data processors for signal detection over a class of contaminated noises
[AD-A160213] N86-18617
An equation for one-sided tolerance limits for normal distributions
[AD-A159831] N86-19097
Bounds on distributions arising in order restricted inference: The partially ordered case
[AD-A159872] N86-19098
SPADE (series parallel directed acyclic graph evaluator): A tool for performance and reliability evaluation, revision
[AD-A160289] N86-19113
DISTRIBUTION MOMENTS
Moving average models with bivariate exponential and geometric distributions
[AD-A160178] N86-19071
DIURNAL VARIATIONS
Plasma variations at the dayside magnetopause N86-18858
DIVING (UNDERWATER)
Evaluation of the ocean technology system's MK 1-S wireless surface unit, MK 1 DCI two diver air radio, MK 1-D-A wireless diver unit, MK 1-D-H hardwire diver unit and MK 1-D/S unit
[AD-A160480] N86-18595
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] N86-18989
DOCUMENT STORAGE
Defense technical information center cataloging guidelines
[AD-A160100] N86-19255
DOCUMENTS
Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports
[AD-A160409] N86-19256
Computing Services Writing and Editing Standards
[DE85-018547] N86-19257
DOPPLER EFFECT
Frontal passage data from the SOUSY-VHF-radar
[AD-A160211] N86-18919
In-flight turbulence detection
[AD-A160380] N86-18923
Joint agency turbulence experiment
[AD-A160420] N86-18924
A semiempirical model for Doppler spectral features of microwave radar sea scatter
[AD-A160576] N86-18946
Poloidal rotation of reversed field pinch plasma
[IPPJ-749] N86-19202

DOPPLER RADAR
In-flight turbulence detection
[AD-A160360] N86-18923
Joint agency turbulence experiment
[AD-A160420] N86-18924
A semiempirical model for Doppler spectral features of microwave radar sea scatter
[AD-A160576] N86-18946
DOSIMETERS
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800
DRAG
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
DREDGED MATERIALS
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
DRILLING
Drilling risers for great water depths: Advantage for mass reduction by means of composite materials
[SNIAS-852-430-101] N86-18454
DRINKING
Ultraviolet disinfection of water for small water supplies
[PB85-239960] N86-18579
DROP SIZE
Some microphysical processes affecting aircraft icing
[AD-A160375] N86-18921
DROPS (LIQUIDS)
Development of high effectiveness droplet heat exchangers
[DE85-013352] N86-18677
DUCTILITY
Influence of chemical composition of flux on ductility of seam metal in electroslag welding N86-18544
DUPLEXERS
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
DURABILITY
Kinetics of deformation and damage accumulation in concentration zones upon nonisothermal low-cycle loading N86-18512
DUST
Dust Induced Electro-Magnetic Noise (DIEMN)
[AD-A160565] N86-18596
DYES
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] N86-18962
DYNAMIC CHARACTERISTICS
Effects of blade-to-blade dissimilarities on rotor-body lead-lag dynamics
[AD-A160497] N86-18317
Axial compressor reversed flow performance
[AD-A160773] N86-18327
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Dynamic characteristics of the 48-inch water tunnel drive pump
[AD-A159904] N86-18668
Hydrographic data from the OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program: OPTOMA16, 20 May - 23 June 1985
[AD-A160270] N86-18942
DYNAMIC CONTROL
Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290
DYNAMIC LOADS
Construction of non-linear model for binary metal-matrix composites
[AD-A159721] N86-18450
Study of journal bearing dynamics using 3-dimensional motion picture graphics
[NASA-TM-87205] N86-18647
Laser interferometer measurements of refractive index in shock-compressed materials
[DE85-015505] N86-18678
High strain rate approx.10(6)/s response of 304 stainless steel at various strains
[DE86-000795] N86-18762
Simulated ground response using nonlinear elastic moduli
[AD-A160590] N86-18885
DYNAMIC MODELS
Development and application of dynamic simulations of a subsonic wind tunnel
[NASA-TM-87211] N86-18338
DYNAMIC MODULUS OF ELASTICITY
Simulated ground response using nonlinear elastic moduli
[AD-A160590] N86-18885
DYNAMIC RESPONSE
Dynamic analysis of systems having large damping variations
[TIB5-012190] N86-18757
Microburst wind shear models from the Joint Airport Weather Studies (JAWS)
[AD-A159758] N86-18910
DYNAMIC STABILITY
Adaptive decentralized control
[AD-A160187] N86-19058

E

E REGION
Plasma instabilities in the auroral E-region N86-18825
The MAP/WINE electron density profiles in the D and E regions: A comparison of EISCAT, PRE rocket data N86-18855
EAR
Practical application of basic research on impulse noise hazard
[AD-A160432] N86-18964
EARTH ATMOSPHERE
Clear-air transmission in the 8 to 12-micrometer band at selected stations
[AD-A160625] N86-19195
EARTH CRUST
Calculation of source and structure parameters at regional and teleseismic distances
[AD-A160138] N86-18878
EARTH MANTLE
Calculation of source and structure parameters at regional and teleseismic distances
[AD-A160138] N86-18878
EARTH MOVEMENTS
Simulated ground response using nonlinear elastic moduli
[AD-A160590] N86-18885
EARTH OBSERVATIONS (FROM SPACE)
Different problems of space stereoscopic observation N86-18378
Space station: ESA views on requirements for experimental and operational Earth observation missions N86-18379
EARTH ORBITAL ENVIRONMENTS
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
EARTH SURFACE
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
EARTHQUAKE RESISTANCE
Aseismic bash isolation N86-18748
EARTHQUAKE RESISTANT STRUCTURES
The Shock and Vibration Digest, volume 17, no. 7
[AD-A160321] N86-18747
Aseismic bash isolation N86-18748
EARTHQUAKES
Simulated ground response using nonlinear elastic moduli
[AD-A160590] N86-18885
ECHO SUPPRESSORS
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
ECOLOGY
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-018490] N86-18931
ECONOMETRICS
The limiting distribution of least squares in an errors-in-variables linear regression model
[AD-A160190] N86-19105
ECONOMIC FACTORS
Policy and organizational considerations for improving transfer of university research information and effecting availability of expertise to state agencies
[PB85-232932] N86-19261
ECOSYSTEMS
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600
EDDY CURRENTS
Coupling between eddy currents and rigid body rotation: Analysis, computation, and experiments
[DE85-013877] N86-18604
EDDY VISCOSITY
Measured similarity properties of eddy viscosity and mixing length in three-dimensional turbulent stern flows
[AD-A156644] N86-18666
EDGES
Development of a reduced mindlin hybrid stress thin multilayer plate element with application to edge contact problems
[AD-A160453] N86-18453
Comparison of two MTF measurement methods: Sine-wave versus edge gradient analysis
[AD-A160800] N86-18700
EDITING
Digital audio editing
[BBC-RD-1985/10] N86-18583
Computing Services Writing and Editing Standards
[DE85-018547] N86-19257
EDITING ROUTINES (COMPUTERS)
FRED: A program development tool
[DE86-000857] N86-19043
Text compression using word tokenization
[DE86-000832] N86-19260
EDUCATION
European remote sensing: Future needs in education N86-18374
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050
The design and implementation of an operating system for the IBM personal computer
[AD-A160875] N86-19052
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246
An annotated bibliography of literature integrating organizational and systems theory
[AD-A160912] N86-19249
EFFERENT NERVOUS SYSTEMS
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] N86-18958
EFFICIENCY
Status of the light-induced effect in amorphous silicon material and in a-Si solar cells
[DE85-016857] N86-18790
EIGENVALUES
Three-dimensional stress singularities in anisotropic materials and composites
[AD-A160433] N86-18452
Lanczos algorithm applied to modal analysis of very large structures
[AD-A160210] N86-18733
A note on asymptotic joint distribution of the Eigenvalues of a noncentral multivariate F matrix
[AD-A160422] N86-19082
EIGENVECTORS
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
Multigrid method for nearly singular and slightly indefinite problems
[NASA-CR-178026] N86-18991
EISCAT RADAR SYSTEM (EUROPE)
The Coordinated EISCAT and Balloon Observations (CEBO): Experiment and results --- auroral particle precipitation N86-18823
The MAP/WINE electron density profiles in the D and E regions: A comparison of EISCAT, PRE rocket data N86-18855
ELASTIC ANISOTROPY
Three-dimensional stress singularities in anisotropic materials and composites
[AD-A160433] N86-1845
ELASTIC BUCKLING
Elastic buckling of thin-walled unstiffened circular cylinders under bending, axial compression and internal pressure
[ESDU-84006] N86-1874
ELASTIC PLATES
Acoustic research report
[AD-A159900] N86-1912

ELASTIC PROPERTIES
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159882] N86-18752
Nonlinear wave propagation study
[AD-A160179] N86-18879
ELASTIC SCATTERING
Helium scattering studies of the surface structure and dynamics of rare gas crystals
[AD-A159942] N86-19232
ELASTIC WAVES
Collision of Mach reflections with a 90 deg ramp in air and CO2
[UTIAS-290] N86-18645
ELASTOMERS
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548
Effect of simple stress on the glass transition of polymers at high pressure
[AD-A160282] N86-18549
ELECTRIC BATTERIES
Ag/AgCl reference electrode in thionyl chloride electrolytes
[DE85-016221] N86-18633
Polymer electrolyte based on poly(ethylene imine) and lithium salts
[AD-A160381] N86-18779
ELECTRIC CELLS
Phosphoric acid electric utility fuel cell technology development
[NASA-CR-176496] N86-18638
ELECTRIC CONTACTS
Cadmium zinc sulfide/copper indium diselenide module design and cost assessment
[DE85-016854] N86-18509
ELECTRIC CURRENT
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217
ELECTRIC DISCHARGES
Flight model discharge system
[AD-A160434] N86-18349
Real time: Automatic vehicle potential determination from ESA measurements. Part 1. The count ratio algorithm
[AD-A160459] N86-18435
Fundamental processes in partially ionized plasmas
[AD-A160011] N86-19212
ELECTRIC ENERGY STORAGE
Magnetically confined kinetic-energy storage ring: A new fundamental energy-storage concept
[DE85-007962] N86-18635
ELECTRIC FIELDS
On the influence on high-latitude convection patterns of polarization electric fields N86-18824
Are parallel electric fields really the cause of auroral particle acceleration? N86-18826
Electro-optical Kerr effect voltage measurements on multi-megavolt pulsed power accelerators
[DE85-016580] N86-19158
ELECTRIC FILTERS
Recirculating electric air filter
[DE85-017751] N86-18632
ELECTRIC POTENTIAL
Electro-optical Kerr effect voltage measurements on multi-megavolt pulsed power accelerators
[DE85-016580] N86-19158
ELECTRIC POWER SUPPLIES
New York State Police remote communications site small wind energy conversion system
[TI85-901683] N86-18784
Tevatron extraction microcomputer
[DE85-016985] N86-19170
ELECTRIC PROPULSION
Metallic induction reaction engine
[AD-A160137] N86-18439
ELECTRICAL ENGINEERING
Reconstruction of multidimensional signals from zero crossings
[AD-A160062] N86-18615
RLE (Research Laboratory of Electronics) progress report number 127
[AD-A160477] N86-18621
ELECTRICAL FAULTS
Electro-thermomigration as an electrical overstress failure mechanism
[DE85-009839] N86-18634
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
ELECTRICAL INSULATION
The effect of bulk traps on the InP (Indium Phosphide) accumulation type MISFET (Metal-Insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622
ELECTRICAL MEASUREMENT
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341
Electro-optical Kerr effect voltage measurements on multi-megavolt pulsed power accelerators
[DE85-016580] N86-19158
ELECTRICAL PROPERTIES
Electrical method of making conductive paths in silicon
[AD-D011945] N86-18610
ELECTRICAL RESISTIVITY
Conductivity, DSC, FTIR, and NMR studies of Poly(vinyl acetate) complexed with alkali metal salts
[AD-A160450] N86-18467
Ultrapure aluminum N86-18535
New polymeric materials expected to have superior properties for space-based use
[AD-A160285] N86-18550
ELECTRO-OPTICS
The Modular Optoelectronic Multispectral Scanner (MOMS) missions and geoscientific results N86-18364
Radiometric correction of Modular Optoelectronic Multispectral Scanner (MOMS) CCD images N86-18365
Future Modular Optoelectronic Multispectral Scanner (MOMS) developments: Discussion of improvements and possibilities to be expected for geological applications N86-18366
Optical electromagnetic radiation detector
[AD-D011929] N86-18609
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
ELECTROCHEMISTRY
Surface enhancement factors for Raman scattering at silver electrodes. Role of adsorbate-surface interactions and electronic structure
[AD-A160120] N86-18465
Electrocrystallization in microgravity
[NASA-TM-87202] N86-19274
ELECTRODES
Comparison between surface-enhanced Raman and surface infrared spectroscopies for strongly perturbed adsorbates: Thiocyanate at gold electrodes
[AD-A159954] N86-18462
Surface-enhanced Raman spectroscopy as a probe or adsorbate-surface bonding: Benzene and monosubstituted benzenes adsorbed at gold electrodes
[AD-A159978] N86-18463
Reaction profiles in porous electrodes
[DE85-016512] N86-18631
Ag/AgCl reference electrode in thionyl chloride electrolytes
[DE85-016221] N86-18633
Phosphoric acid electric utility fuel cell technology development
[NASA-CR-176496] N86-18638
ELECTROLYSIS
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
ELECTROLYTES
Painting stainless steel with alternating current N86-18533
Chemical modification of poly(ethylene imine) for polymeric electrolyte
[AD-A160482] N86-18554
Ag/AgCl reference electrode in thionyl chloride electrolytes
[DE85-016221] N86-18633
ELECTROMAGNETIC ABSORPTION
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
ELECTROMAGNETIC FIELDS
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600
Coupling between eddy currents and rigid body rotation: Analysis, computation, and experiments
[DE85-013877] N86-18604
Development of a system to measure the response time of microwave survey instruments to rotating radar antenna patterns
[PB85-230217] N86-18605
Phenomenology of electromagnetic coupling, part 2
[DE86-000838] N86-18642
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Forces on neutral atoms due to electromagnetic fields
[AD-A160719] N86-19151
ELECTROMAGNETIC INTERACTIONS
Antiproton annihilations in nuclei
[DE85-010729] N86-19159
ELECTROMAGNETIC MEASUREMENT
Electromagnetic measurements of multi-year sea ice using impulse radar
[AD-A160737] N86-18598
ELECTROMAGNETIC NOISE
Dust Induced Electro-Magnetic Noise (DIEMN)
[AD-A160565] N86-18596
In-flight turbulence detection
[AD-A160380] N86-18923
ELECTROMAGNETIC PULSES
Dust Induced Electro-Magnetic Noise (DIEMN)
[AD-A160565] N86-18596
Phenomenology of electromagnetic coupling, part 2
[DE86-000838] N86-18642
High voltage picosecond pulse generation utilizing lasers
[AD-A159923] N86-18711
Study of optical sound generation and amplification
[AD-A160758] N86-19196
ELECTROMAGNETIC RADIATION
Photon emission in deformation and failure of metals N86-18527
Propagation of electromagnetic waves in two dimensionally periodic media N86-18580
Electromagnetic measurements of multi-year sea ice using impulse radar
[AD-A160737] N86-18598
Optical electromagnetic radiation detector
[AD-D011929] N86-18609
A computer program to model the Cn2 optical turbulence characteristics of a given atmosphere, its conversion to IBM FORTRAN and utilization
[AD-A159762] N86-18911
ELECTROMAGNETIC SCATTERING
Active and passive remote sensing of ice
[AD-A160075] N86-18939
ELECTROMAGNETIC WAVE FILTERS
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
ELECTROMAGNETISM
Phenomenology of electromagnetic coupling, part 2
[DE86-000838] N86-18642
ELECTROMAGNETS
Phenomenology of electromagnetic coupling, part 2
[DE86-000838] N86-18642
ELECTRON ACCELERATION
Acceleration of auroral electrons by lower-hybrid waves N86-18827
Examination of nonadiabatic effects during an electron beam experiment in the ionosphere N86-18840
Energization of electrons following ion release in the solar wind N86-18843
ELECTRON ACCELERATORS
High-Frequency (HF) wave activity observed beam injector from a rocket-borne electron accelerator N86-18839
ELECTRON BEAM WELDING
Fatigue behaviour of AISI 304 L stainless steel elements, butt welded by the electron beam process
[BLL-RISLEY-TR-5234-(9091.9F)] N86-18743
ELECTRON BEAMS
Nonlinear analysis of Ubitron/Free-Electron laser amplifiers in three-dimensions
[AD-A160631] N86-18722
High-Frequency (HF) wave activity observed beam injector from a rocket-borne electron accelerator N86-18839
Examination of nonadiabatic effects during an electron beam experiment in the ionosphere N86-18840
Beam addressed memory system
[AD-D011930] N86-18993
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171
ELECTRON DENSITY (CONCENTRATION)
Certain features of fine structure in Fe-Ni alloys N86-18483
Research on plasma physics
[AD-A160425] N86-19213
ELECTRON DENSITY PROFILES
The MAP/WINE electron density profiles in the D and E regions: A comparison of EISCAT, PRE rocket data N86-18855
A parameterized procedure for determining real height from ionograms by use of generalized parabolic profiles
[AD-A160383] N86-19121
ELECTRON DIFFRACTION
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505

ELECTRON EMISSION
Distortion of He emission lines after fast-ion collisions
[DE85-018347] N86-19161
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
ELECTRON ENERGY
Nonlinear analysis of Ubitron/Free-Electron laser amplifiers in three-dimensions
[AD-A160631] N86-18722
Self-consistent electronic structure of alpha-phase Hume Rothery electron compound alloys Cu sub c Zn sub1-c, Cu sub cGa sub1-c, and Cu sub c Ge sub1-c
[DE85-017560] N86-19234
The Cygnus loop supernova remnant: New observations and a framework for understanding its structure and evolution N86-19273
ELECTRON IRRADIATION
Fracto-emission from polymers
[AD-A160510] N86-18555
Electron irradiation of p-type mercury cadmium telluride
[AD-A159737] N86-18612
ELECTRON MOBILITY
Surface and interfacial properties of InP
[AD-A159912] N86-19230
ELECTRON PARAMAGNETIC RESONANCE
Photogeneration of confined soliton pairs (Bipolarons) in polythiophene
[AD-A160157] N86-18616
ELECTRON PRECIPITATION
The Coordinated EISCAT and Balloon Observations (CEBO): Experiment and results --- auroral particle precipitation N86-18823
ELECTRON SCATTERING
Scattering of electrons in the equatorial plane during a pulsating aurora N86-18828
Annual Gaseous Electronics Conference (37th): Program and abstracts
[AD-A159928] N86-19147
ELECTRON SPECTROSCOPY
Triply differential studies of atomic and molecular photoionization using synchrotron radiation
[AD-A160587] N86-19150
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
ELECTRON STATES
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618
Radiative lifetimes and kinetic studies of metastable NO(+)(a 3 sigma(+)) and O2(+)(a 4 pi sub u)
[AD-A159759] N86-19122
Intramolecular coupling in metal-free binuclear phthalocyanines
[AD-A160784] N86-19154
ELECTRON TRANSFER
Fluorescence spectrophotometers
[DE85-010686] N86-18703
ELECTRONIC CONTROL
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625
ELECTRONIC EQUIPMENT
TRASSA system introduction causes various problems N86-18285
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
Electro-thermomigration as an electrical overstress failure mechanism
[DE85-009839] N86-18634
GaP/Al/sub x/Ga/sub 1-x/P heterojunction semiconductor controlled rectifier for high-temperature electronic applications
[DE86-000204] N86-18641
Spectroscopic diagnostics to support advanced microelectronic fabrication techniques
[AD-A160192] N86-18717
ELECTRONIC MAIL
Access to inter-organization computer networks
[AD-A160855] N86-19051
ELECTRONIC MODULES
A robust layered control system for a mobile robot
[AD-A160833] N86-18736
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246
ELECTRONS
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
ELECTROPLATING
Surface-enhanced Raman spectroscopy as a probe of adsorbate-surface bonding: Benzene and monosubstituted benzenes adsorbed at gold electrodes
[AD-A159978] N86-18463
ELECTROSLAG WELDING
Influence of chemical composition of flux on ductility of seam metal in electroslag welding N86-18544
ELECTROSTATIC CHARGE
Dust Induced Electro-Magnetic Noise (DIEMN)
[AD-A160565] N86-18596
ELECTROSTATIC PROBES
Flight model discharge system
[AD-A160434] N86-18349
ELECTROSTATIC WAVES
Electrostatic ion waves generated by ion loss-cone distributions in the magnetosphere
[KGI-PREPRINT-082] N86-19210
ELECTROSTATICS
Electrostatic unbalances of transmission lines
[AD-A160742] N86-18628
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone
[KGI-PREPRINT-081] N86-19208
ELECTROSTRICTION
Piezoelectric and electrostrictive materials for transducer applications
[AD-A160465] N86-18620
ELEMENTARY PARTICLE INTERACTIONS
Experimental studies of elementary particle interactions at high energies
[DE86-001101] N86-19177
ELEVATION
Analog inclination data system
[AD-D011940] N86-18688
ELLIPSOMETERS
Optical functions of silicon at elevated temperatures determined by polarization modulation ellipsometry
[DE86-001427] N86-19201
ELLIPTIC DIFFERENTIAL EQUATIONS
An adaptive filter finite element method for linear elliptic problems
[CTH-MATH-1985-13] N86-19092
ELLIPTICITY
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341
EMBOLISMS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970
EMBRITTLEMENT
Effect of medium pH on hydrogen permeability of passivating films and rate of growth of corrosion cracks in 40KhN steel N86-18524
Role of martensite conversion in hydrogen embrittlement of unstable austenite steels N86-18525
Effect of inhibitors on electrochemical conditions during tests of specimens of 40 Kh steel for static corrosion cracking resistance N86-18526
EMISSION
Research on plasma physics
[AD-A160425] N86-19213
EMISSION SPECTRA
Fracto-emission from polymers
[AD-A160510] N86-18555
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149
Intramolecular coupling in metal-free binuclear phthalocyanines
[AD-A160784] N86-19154
Distortion of He emission lines after fast-ion collisions
[DE85-018347] N86-19161
EMITTANCE
Particle-in-cell simulations of the lasertron
[DE85-012698] N86-18723
ENCAPSULATING
Development of capsular adhesive systems and evaluation of their stability
[AD-A159913] N86-18546
ENDOTHELIUM
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970
ENDOTOXINS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
ENERGETIC PARTICLES
Luminescence from metals and insulators
[DE86-001339] N86-19200
ENERGY ABSORPTION
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
ENERGY CONSUMPTION
Recirculating electric air filter
[DE85-017751] N86-18632
ENERGY CONVERSION EFFICIENCY
Metallic induction reaction engine
[AD-A160137] N86-18439
Magnetically confined kinetic-energy storage ring: A new fundamental energy-storage concept
[DE85-007982] N86-18635
Evaluation of advanced design concepts for absorption heat pumps
[DE85-005090] N86-18780
Dual-stroke heat pump field performance
[DE85-005247] N86-18783
ENERGY GAPS (SOLID STATE)
Photogeneration of confined soliton pairs (Bipolarons) in polythiophene
[AD-A160157] N86-18616
ENERGY LEVELS
Studies of compound states of negative ions using laser beams
[AD-A160483] N86-18719
Self-consistent electronic structure of alpha-phase Hume Rothery electron compound alloys Cu sub c Zn sub1-c, Cu sub cGa sub1-c, and Cu sub c Ge sub1-c
[DE85-017560] N86-19234
ENERGY OF FORMATION
Binding between carbon atoms and vacancies in platinum
[DE86-000624] N86-19238
ENERGY POLICY
Design method for the calculation of performances and flap movement of flexible wind turbine blades
[VTH-M-453] N86-18795
Output calculations of the GIROMILL wind turbine
[VTH-M-484] N86-18796
ENERGY SPECTRA
Joint agency turbulence experiment
[AD-A160420] N86-18924
If you like low P/sub T/ multiparticle physics, you'll love nucleus-nucleus interactions or Do E/sub T/ distributions obey KNO scaling in high energy pp and nucleus-nucleus collisions
[DE86-000633] N86-19186
ENERGY TECHNOLOGY
Resource directory of DOE information organizations, revision 2
[DE84-015655] N86-19258
ENERGY TRANSFER
The energy balance in the solar chromosphere-corona transition zone N86-18830
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149
ENGINE NOISE
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329
High velocity gas jet noise control N86-19123
ENGINE PARTS
Interactive effects of high- and low-frequency loading on fatigue
[AD-A160601] N86-18318
Aeronautical facilities catalogue. Volume 2: Airbreathing propulsion and flight simulators
[NASA-RP-1133] N86-18328
ENGINE TESTS
Aeronautical facilities catalogue. Volume 2: Airbreathing propulsion and flight simulators
[NASA-RP-1133] N86-18328
ENGINEERING DRAWINGS
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
ENGINES
Metallic induction reaction engine
[AD-A160137] N86-18439
ENGLISH LANGUAGE
Automatic processing of Navy message narrative
[AD-A159670] N86-19056
ENTRAINMENT
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18930

ENTROPY
Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029
The numerical viscosity of entropy stable schemes for systems of conservation laws
[NASA-CR-178021] N86-19065
ENVIRONMENT EFFECTS
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-016490] N86-18931
ENVIRONMENT MANAGEMENT
Analysis of the Metric Camera MC-BW for land use classification and land use hazard management (thematic mapping of Metric Camera Spacelab black and white photographs) N86-18363
Remote sensing for environmental management of British National Parks: Review and preview N86-18368
ENVIRONMENT POLLUTION
Microbial degradataion of oil in the marine environment
[FOA-C-40219-B4] N86-18807
ENVIRONMENT PROTECTION
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
ENVIRONMENTAL CHEMISTRY
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449
ENVIRONMENTAL MONITORING
Remote sensing for environmental management of British National Parks: Review and preview N86-18368
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699
Practical aspects of measuring dry deposition
[DE85-018465] N86-18802
ENVIRONMENTAL SURVEYS
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
ENVIRONMENTS
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973
ENZYMES
Rapid identification of micro-organisms
[AD-A159945] N86-18952
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
The production of RhO(D) negative erythrocytes
[AD-A160775] N86-18971
EPOXY COMPOUNDS
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
EPOXY RESINS
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
EQUATIONS
An equation for one-sided tolerance limits for normal distributions
[AD-A159831] N86-19097
EQUATIONS OF MOTION
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86-18926
Development and validation of a vertically two-dimensional mesoscale numerical model
[AD-A160741] N86-18927
EQUATIONS OF STATE
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
EROSION
Effect of ion implantation on subsequent erosion and wear behavior of solids
[DE86-000088] N86-18506
ERROR ANALYSIS
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Adaptive decentralized control
[AD-A160187] N86-19059
A cascaded coding scheme for error control
[NASA-CR-175513] N86-19062
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
The strong consistency of error probability estimates in NN discrimination
[AD-A160016] N86-19101
ERROR DETECTION CODES
Comparing the effectiveness of software testing strategies
[NASA-CR-176511] N86-19020
ERRORS
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Representation of topography in spectral models
[AD-A159917] N86-18877
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Estimation of population proportion and of probabilities of misclassification from imperfect binomial data by comparison with results of a standard method of known imperfection
[AD-A159926] N86-19099
ERS-1 (ESA SATELLITE)
The ERS-1 Active Microwave Instrumentation (AMI) design constraints N86-18353
The ERS-1 observations of lakes for climate research N86-18385
Relative vertical positioning using ground-level transponders with the ERS-1 altimeter N86-18386
The ERS-1 altimeter tracker performance simulation N86-18387
ERYTHROCYTES
The production of RhO(D) negative erythrocytes
[AD-A160775] N86-18971
ESTIMATES
Estimation of r.m.s. strain in laminated skin panels subject to random acoustic loading
[ESDU-84008-A] N86-18745
Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159863] N86-18768
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160650] N86-18986
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
Estimation of palm measures of stationary point processes
[AD-A160516] N86-19114
Assessing system reliability using censoring methodology
[AD-A160616] N86-19115
ESTIMATING
Estimating the R-curve from residual strength data
[NASA-TM-87182] N86-18750
New method for estimating isotopic ratios from pulse-counting mass spectrometric data
[DE86-000095] N86-19044
The amount of noise inherent in bandwidth selection for a kernel density estimator
[AD-A160235] N86-19107
ESTUARIES
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938
ETCHING
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
New multiple sheet resistance technology for thin film circuits
[DE85-016459] N86-18637
The use of electron beam position modulation in auger depth profile analysis
[AD-A159712] N86-19163
EULER EQUATIONS OF MOTION
Full pseudospectral solution to the Euler equations of motion for airfoil flow at transonic speeds
[AD-A159714] N86-18293
Marching iterative methods for the parabolized and thin layer Navier-Stokes equations
[NASA-CR-178028] N86-18650
Steady Euler simulations using unstructured meshes N86-18659
Accuracy of schemes for the Euler equations with non-uniform meshes
[NASA-CR-178038] N86-19086
EURECA (ESA)
Spacelab special: EURECA N86-18437
EUROPE
The Joint Research Committee (JRC) program on remote sensing N86-18373
European remote sensing: Future needs in education N86-18374
EUROPEAN SPACE PROGRAMS
Proceedings of the EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications
[ESA-SP-233] N86-18351
Space station: ESA views on requirements for experimental and operational Earth observation missions N86-18379
Scientific balloon and sounding rocket program in Germany N86-18812
Swiss scientific balloon and sounding rocket experiments 1983-1985 N86-18814
The Norwegian scientific balloon and sounding rocket program 1985-1988 N86-18816
EUTECTIC ALLOYS
Rapidly solidified microstructures in eutectic alloys
[DE85-018187] N86-18504
EVALUATION
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Development of capsular adhesive systems and evaluation of their stability
[AD-A159913] N86-18546
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] N86-18983
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Quantitative evaluation of software methodology
[NASA-CR-176522] N86-19022
Simulation and evaluation of the AT and T proposed pattern recognition algorithm for group 4 facsimile
[AD-A160864] N86-19037
Stirling powered van program overview
[NASA-TM-87227] N86-19265
EVAPORATION
Evaporation in deserts: Physical aspects and remote sensing techniques N86-18367
EVERGLADES (FL)
Geologic structure of the surficial aquifer system underlying Everglades National Park and Big Cypress National Preserve
[PB85-247609] N86-18772
EXCHANGING
Aerodynamic characteristics of an air-exchanger system for the 40- by 80-foot wind tunnel at Ames Research Center
[NASA-TM-88192] N86-18291
EXCITATION
Production of CN (A2pi i) in the photolysis of acetonitrile at 158 nm
[AD-A160175] N86-18445
Excitation mechanisms in the atmospheres of yellow and red giant and supergiant stars N86-18834
EXERCISE PHYSIOLOGY
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] N86-19967
EXHAUST EMISSION
Emission characterization of a 2-stroke heavy-duty diesel coach engine and vehicle with and without a particulate trap
[PB85-239770] N86-18742
EXHAUST GASES
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712

EXHAUST SYSTEMS
Emission characterization of a 2-stroke heavy-duty diesel coach engine and vehicle with and without a particulate trap
[PB85-239770] N86-18742

EXOBIOLOGY
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] N86-18949
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 279)
[NASA-SP-7011(279)] N86-18960

EXPERIMENTATION
Layered magnetic superlattices
[DE85-018368] N86-19236
Why bother with experiments?
[AD-A160634] N86-19248

EXPERT SYSTEMS
Controlling production firing: The FCL language
[AD-A160423] N86-19028
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060

EXPLOSIONS
Dust Induced Electro-Magnetic Noise (DIEMN)
[AD-A160565] N86-18596

EXPLOSIVE WELDING
Increasing the corrosion resistance of welded joints in A85 aluminum N86-18523

EXPLOSIVES
Reflected impulse near spherical charges
[AD-A160797] N86-18572
Binder study for HMX/TATB explosives
[DE86-001235] N86-18573
DOE explosive safety manual, revision 2
[DE86-001154] N86-18574
Suitability of polyvinyl chloride pipe for monitoring TNT, RDX, HMX, and DNT in groundwater
[AD-A160733] N86-18798

EXPONENTIAL FUNCTIONS
Moving average models with bivariate exponential and geometric distributions
[AD-A160178] N86-19071
The strong consistency of error probability estimates in NN discrimination
[AD-A160016] N86-19101
Construction of exponential Martingales for counting processes
[AD-A160189] N86-19104

EXTERNAL TANKS
Analysis of heat-transfer measurements from two AEDC wind tunnels on the shuttle external tank
[AD-A160406] N86-18331

EXTRAGALACTIC RADIO SOURCES
Report by Subgroup 2130 (link to extragalactic reference objects) — HIPPARCOS N86-18429
Relating the HIPPARCOS reference frame to the radio reference frame via Very Large Array (VLA) measurements of the precise position of stellar radio emission N86-18431

EXTRATERRESTRIAL RADIATION
CRRES/SPACERAD (combined release and radiation effects satellite/space radiation effects program) experiment descriptions
[AD-A160504] N86-18350
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975

EXTREMELY HIGH FREQUENCIES
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links
[NASA-CR-178532] N86-18342

EXTREMELY LOW FREQUENCIES
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600

EXTREMUM VALUES
Critical behavior of some measure-valued processes
[CTH-MATH-1985-14] N86-19093
Semicontinuous processes in multidimensional extreme value theory
[CTH-MATH-1985-7] N86-19118

EYE MOVEMENTS
Eye movements and spatial pattern vision
[AD-A160408] N86-18963

F

F REGION
Nonisotropic temperature distributions in the auroral F-region as measured with EISCAT N86-18829

F-16 AIRCRAFT
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630

FABRICATION
Surface stress modification for repair of stress-relieved carbon steel fabrications
[DE86-000563] N86-18507
Phosphoric acid electric utility fuel cell technology development
[NASA-CR-176496] N86-18638
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697
Amorphous silicon conceptual module design and cost estimate
[DE85-012177] N86-18787

FABRY-PEROT INTERFEROMETERS
Optical electromagnetic radiation detector
[AD-D011929] N86-18609

FACSIMILE COMMUNICATION
Scan line difference compression algorithm simulation study
[AD-A160846] N86-19036
Simulation and evaluation of the AT and T proposed pattern recognition algorithm for group 4 facsimile
[AD-A160864] N86-19037

FACTOR ANALYSIS
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117

FACTORIZATION
Factorization and reduction methods for optimal control of distributed parameter systems
[NASA-CR-178033] N86-18992
A modified frontal technique suitable for parallel systems
[AD-A159769] N86-19014

FAILURE
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
Assessing system reliability using censoring methodology
[AD-A160616] N86-19115

FAILURE ANALYSIS
Low-cycle fatigue and crack resistance of boiler pipes and steam lines made of 12Kh1MF steel N86-18515
Photon emission in deformation and failure of metals N86-18527
Cracking resistance of polycarbonate and polymethylmethacrylate at high loading rates N86-18528
Electro-thermomigration as an electrical overstress failure mechanism
[DE85-009839] N86-18634
Degradation of beta" alumina electrolytes
[DE85-015300] N86-18636
Acoustic emission/flaw relationship for in-service monitoring nuclear pressure vessels
[TI85-016647] N86-19139

FAILURE MODES
Assessment of neutron requirements and potential sources for fusion development
[DE85-901723] N86-19183

FALLING SPHERES
The importance of precision radar tracking data for the determination of density and winds from the high-altitude inflatable sphere N86-18819
Intercomparison of wind measurements performed with metrockets N86-18820

FAR INFRARED RADIATION
Optical properties of the metals Al, Co, Cu, Au, Fe, Pb, Ni, Pd, Pt, Ag, Ti and W in the infrared and far infrared
[AD-A159736] N86-18492
Laser pumped frequency standards
[AD-A160606] N86-18720

FAR ULTRAVIOLET RADIATION
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18718

FAST FOURIER TRANSFORMATIONS
Fast Fourier Transform (FFT) subroutine for determining frequency response data for digital simulations
[AD-A160546] N86-19033
On the solution of circulant linear systems
[AD-A159841] N86-19067
The Bayesian approach to recursive state estimation: implementation and application
[AD-A160836] N86-19086

FAST NUCLEAR REACTORS
Heat pipe space nuclear reactor design assessment. Volume 1: Design status of the SP-100 heat pipe space nuclear reactor system
[AD-A160279] N86-19164

FASTENERS
Effectiveness of fatigue life enhancing fasteners in the design and rework of aircraft structures
[AD-A159676] N86-18316

FATIGUE (MATERIALS)
Interactive effects of high- and low-frequency loading on fatigue
[AD-A160601] N86-18318
Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321
Effect of hardening treatments on microfluidity of steels and bronzes N86-18529
Fatigue behaviour of AISI 304 L stainless steel elements, butt welded by the electron beam process
[BLL-RISLEY-TR-5234-(9091.9F)] N86-18743
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755
Characterization of acoustic emission signals generated by water flow through intergranular stress corrosion cracks
[TI85-014970] N86-19140

FATIGUE LIFE
Effectiveness of fatigue life enhancing fasteners in the design and rework of aircraft structures
[AD-A159676] N86-18316
The test loads sequences applied to the CT4 full scale fatigue test
[AD-A160736] N86-18320
Influence of stress concentration on fatigue and corrosion-fatigue properties of VAL10 aluminum casting alloy and AK6 aluminum forging alloy N86-18513
Contact fatigue upon low-cycle loading of WC-Co hard alloys designed for pressure working of metals N86-18517
Life extension of components with high cumulative fatigue usage
[TI85-014631] N86-18758

FATIGUE TESTS
Effectiveness of fatigue life enhancing fasteners in the design and rework of aircraft structures
[AD-A159676] N86-18316
The test loads sequences applied to the CT4 full scale fatigue test
[AD-A160736] N86-18320
Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321
Effects of micro-alloying on the fatigue crack resistance of structural steel
[BLL-M-36488-(5828.4)] N86-18479
Development and design of an advanced directional shear
[AD-A159647] N86-18751
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755

FAULT TOLERANCE
Reliability evaluation of fault-tolerant multiprocessor systems
[AD-A160234] N86-18996
Replication and fault-tolerance in the ISIS system, revised
[AD-A160039] N86-19018
The SURE Reliability Analysis Program
[NASA-TM-87593] N86-19096
SPADE (series parallel directed acyclic graph evaluator): A tool for performance and reliability evaluation, revision
[AD-A160289] N86-19113

FAULT TREES
Reliability evaluation of fault-tolerant multiprocessor systems
[AD-A160234] N86-18996

FEASIBILITY ANALYSIS
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737
Heat pipe space nuclear reactor design assessment. Volume 2: Feasibility study of upgrading the SP-100 heat pipe space nuclear power system
[AD-A160280] N86-19165

FEEDBACK
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625

FEEDBACK CONTROL
A robust layered control system for a mobile robot
[AD-A160833] N86-18736
Servo operated anti-G suit pressurization system
[AD-D011932] N86-19988

Bounds on interaction in multivariable systems and a design method for low interaction N86-19061

FERRITES
Structural changes in ferrite-austenite steel 03Kh25N6 during hot torsion
[BLL-M-36451-(5828.4F)] N86-18484
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613

FERROMAGNETIC MATERIALS
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237

FERROMAGNETIC RESONANCE
Layered magnetic superlattices
[DE85-018368] N86-19236

FERROUS METALS
USSR Report: Materials Science and Metallurgy N86-18510
Irreplaceable metal N86-18530

FIBER OPTICS
Optical surface roughness and selective etching of interdendritic rexfilum III phases(s)
[AD-A159949] N86-18495
Deuterated polymers: Chemical and physical properties and future prospects
[AD-A160762] N86-18562
Diagnostic apparatus and method for use in the alignment of one or more laser means onto a fiber optics interface
[DE85-017756] N86-18725
Microbending fiber optic acoustic sensor
[AD-D011938] N86-19124
The effects of hydrostatic pressure on optical fibers (fiscal year 1983 report)
[AD-A159915] N86-19191

FIBER REINFORCED COMPOSITES
Construction of non-linear model for binary metal-matrix composites
[AD-A159721] N86-18450
Comparative creep analysis of unidirectionally oriented composite materials with various kinds of reinforced fibers N86-18520
Estimation of r.m.s. strain in laminated skin panels subject to random acoustic loading
[ESDU-84006-A] N86-18745

FIBERS
Graphite fiber intercalation: Basic properties of copper chloride intercalated fibers
[NASA-TM-87217] N86-18442

FIBROBLASTS
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] N86-18951

FIELD EFFECT TRANSISTORS
Method of making self-aligned IGFET
[AD-D011926] N86-18608
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
The effect of bulk traps on the InP (Indium Phosphide) accumulation type MISFET (Metal-Insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622

FIELD STRENGTH
An investigation of Band 2 field strengths: The Northampton experiment
[BBC-RD-1985/8] N86-18582

FIELD THEORY (ALGEBRA)
Class groups of orders and Chow groups of their Brauer-Severi schemes
[CTH-MATH-1985-15] N86-19094

FIELD THEORY (PHYSICS)
The Phi 2 to the 4th power equations of motion. Part 1: Sign and splitting properties. Definition of Phi Lambda-subsets
[REPT-52-A-PT-1] N86-19243
Space-time means and nonlinear Klein-Gordon equations
[CTH-MATH-1985-19] N86-19245

FIGHTER AIRCRAFT
A comparative evaluation of the reliability improvement in line repiaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
The beginnings of airborne weightlessness research
[AD-A160575] N86-18966

FILE MAINTENANCE (COMPUTERS)
A comparison of multi-key file structures and associtive retrieval algorithms for database applications N86-19254

FINE STRUCTURE
Certain features of fine structure in Fe-Ni alloys N86-18483
Treatment of metal powders in attrition machines
[BLL-M-36420-(5282.4F)] N86-18485
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873

FINITE DIFFERENCE THEORY
Computational fluid dynamics, volume 2 --- conference
[VKI-LS-1985-04-VOL-2] N86-18680
Compact finite difference methods for solving incompressible Navier-Stokes equations around oscillating bodies N86-18661
Development and validation of a vertically two-dimensional mesoscale numerical model
[AD-A160741] N86-18927
A two-dimensional mesh moving technique for time dependent partial differential equations
[AD-A160204] N86-19073

FINITE ELEMENT METHOD
Computational fluid dynamics, volume 1 --- conference
[VKI-LS-1985-04-VOL-1] N86-18652
Introduction to finite elements N86-18654
Finite element calculation of generalized Newtonian flow N86-18655
Finite element methods for non-Newtonian flows N86-18656
Advection-diffusion — finite element method N86-18657
The time-dependent incompressible Navier-Stokes equations via Finite Element Method (FEM) N86-18658
Steady Euler simulations using unstructured meshes N86-18659
Role of small computers in two-dimensional flow modeling
[AD-A159668] N86-18667
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159882] N86-18752
Finite element mesh for a complete solution of a problem with a singularity
[AD-A159890] N86-18754
A modified frontal technique suitable for parallel systems
[AD-A159769] N86-19014
A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068
A two-dimensional mesh moving technique for time dependent partial differential equations
[AD-A160204] N86-19073
An adaptive filter finite element method for linear elliptic problems
[CTH-MATH-1985-13] N86-19092

FIRE CONTROL
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050

FIRE FIGHTING
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801

FISHES
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957

FLAME PROPAGATION
Effects of curvature and dilution on unsteady, premixed, laminar flame propagation
[AD-A159934] N86-18461
Interaction effects in premixed turbulent combustion
[AD-A160077] N86-18464

FLAME RETARDANTS
Fire-retardant decorative inks for aircraft interiors
[NASA-TM-88198] N86-18441

FLAME TEMPERATURE
Interaction effects in premixed turbulent combustion
[AD-A160077] N86-18464
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571

FLAMES
Stagnation-point heat transfer from jet flames
[TIB5-011376] N86-18676

FLAMMABILITY
Effects of curvature and dilution on unsteady, premixed, laminar flame propagation
[AD-A159934] N86-18461

FLAPPING
Design method for the calculation of performances and flap movement of flexible wind turbine blades
[VTH-M-453] N86-18795

FLAT PLATES
Two-dimensional Helmholtz flow about a flat plate and related shapes
[AD-A160806] N86-18295

FLEXIBILITY
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563

FLEXING
Properties of carbon-glass plastic material under pure flexure N86-18519
Stressed-strained state of triple-layer honeycomb panels with carbon-plastic sheaths N86-18521

FLIGHT ALTITUDE
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127

FLIGHT CONTROL
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160864] N86-18319
Computer-aided design of robust decentralized controllers
[AD-A160118] N86-19017

FLIGHT CREWS
Night vision manual for the flight surgeon
[AD-A159720] N86-18951
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973

FLIGHT FATIGUE
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973

FLIGHT HAZARDS
Calculation of ice accretion on cylindrical rods according to Bain's model, and comparison with experimental results --- stratus clouds
[DFVLR-FB-85-46] N86-18933

FLIGHT OPERATIONS
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127

FLIGHT PATHS
Calibration of an on-ground aircraft tracking radar by aerial photogrammetry
[NAL-TR-861] N86-18311
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127

FLIGHT PLANS
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127

FLIGHT SIMULATION
Aeronautical facilities catalogue. Volume 2: Airbreathing propulsion and flight simulators
[NASA-RP-1133] N86-18328

FLIGHT SIMULATORS
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333

FLIGHT TESTS
A radar altimeter and the validation of its data products over ice surfaces N86-18352
The 737 graphite composite flight spoiler flight service evaluation
[NASA-CR-172600] N86-18448
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699
Rocket motor cases in 300 M steel: A pioneer development performed in the Brazilian space program N86-18867

FLIGHT TRAINING
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333

FLOAT ZONES
Crystal growth furnace developed for floating zone experiments in sounding rockets N86-18836

FLOATS
High-Altitude Recovery Program (HARP) --- sounding rocket payloads N86-18865

FLOOD PLAINS
Subdivision Froude number
[AD-A160486] N86-18674

FLOW CHARACTERISTICS
Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290

FLOW COEFFICIENTS
Axial compressor reversed flow performance
[AD-A160773] N86-18327
FLOW DISTORTION
Effects of inflow conditions on discrete frequency noise generated by small, axial flow fans
[AD-A160579] N86-19135
FLOW DISTRIBUTION
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160894] N86-18294
Vortex shedding from solid rocket motor propellant inhibitors N86-18569
Collision of Mach reflections with a 90 deg ramp in air and CO2
[UTIAS-290] N86-18645
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program interim report: The Airborne Ocean Thermal Structure Mapping Project
[AD-A160283] N86-18943
FLOW EQUATIONS
One-dimensional model for mud flows
[AD-A159921] N86-18669
FLOW GEOMETRY
One-dimensional model for mud flows
[AD-A159921] N86-18669
FLOW MEASUREMENT
Calibration and use of five-hole flow direction probes for low speed wind tunnel application
[AD-A160262] N86-18330
The minituft surface flow visualisation method: Experience of use in the RAE 5m pressurised low-speed wind tunnel
[AD-A160715] N86-18332
Workshop on Fundamental Research Issues in Orifice Metering
[PB85-226280] N86-18683
Acoustic scintillation liquid flow measurement
[PB85-243608] N86-18707
FLOW VISUALIZATION
The minituft surface flow visualisation method: Experience of use in the RAE 5m pressurised low-speed wind tunnel
[AD-A160715] N86-18332
FLUE GASES
Development of combined nitrogen oxide/sulfur oxide environmental-control technology
[DE86-001301] N86-18804
FLUID BOUNDARIES
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673
FLUID DYNAMICS
Workshop on Fundamental Research Issues in Orifice Metering
[PB85-226280] N86-18683
FLUID FILLED SHELLS
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673
FLUID FLOW
Acoustic scintillation liquid flow measurement
[PB85-243608] N86-18707
Surface creep of mineral oil on inner ring of momentum wheel bearing
[AD-A160746] N86-18735
Fluid structural response of axially cracked cylinders
[TI85-016275] N86-18759
Electrocrystallization in microgravity
[NASA-TM-87202] N86-19274
FLUID MECHANICS
Basic equations of fluid mechanics N86-18653
Measured similarity properties of eddy viscosity and mixing length in three-dimensional turbulent stern flows
[AD-A156644] N86-18666
Transport theory and fluid dynamics
[DE85-018042] N86-18681
Materials science research in rockets, especially in the fields of fluid physics and of metallic dispersions
N86-18835
FLUIDICS
Effect of hardening treatments on microfluidity of steels and bronzes N86-18529
FLUORESCENCE
Fluorescence spectrophotometers
[DE85-010686] N86-18703
FLUORINE
Antistatic packaging material and steel substrates packaged therewith
[AD-D011939] N86-18729
FLUOROHYDROCARBONS
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
FLUX (RATE)
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
Radiative flux parameterizations in a boundary layer model
[INPE-3647-RPE/484] N86-18808
The absolute fluxes of six hot stars in the ultraviolet (912 - 1600 angstroms) N86-19269
FOAMING
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
FOAMS
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
FOCUSING
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel
[DE85-016636] N86-19155
FOG
Reports from the German Meteorological Service. Number 168: A one-dimensional numerical model for the prediction of fog
[ISBN-3-88148-217-2] N86-18889
Central American climatology
[AD-A159989] N86-18915
FORCE DISTRIBUTION
Optimization of mechanisms for force generation by using pulleys and spring
[AD-A159944] N86-18730
FORECASTING
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB
[AD-A160561] N86-18339
Forecasting solar flares and geomagnetic storms at Meudon (France) N86-18870
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110
FORESTS
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597
FORMATIONS
Development of performance assessment methodology for nuclear waste isolation in geologic media
[TI85-017813] N86-19167
FORTRAN
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571
Generation of vertically incident seismograms
[AD-A159695] N86-18876
A computer program to model the Cn2 optical turbulence characteristics of a given atmosphere, its conversion to IBM FORTRAN and utilization
[AD-A159762] N86-18911
FOULING
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18546
FOURIER SERIES
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
FRACTALS
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160
FRACTOGRAPHY
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
SXRF studies of bulk crack-tip plastic relaxation
[DE85-018013] N86-18760
FRACTURE MECHANICS
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Estimating the R-curve from residual strength data
[NASA-TM-87182] N86-18750
Deflection in tapered cantilever beams deflection (gap opening) in double cantilever type fracture toughness specimens
[AD-A159887] N86-18753
FRACTURING
Study of crack resistance of corrosion-resistant glass-reinforced plastics by acoustical emission methods
N86-18516
FRAGMENTATION
Experimental studies in molecular fragmentation: Processes, energetics and diagnostics
[AD-A160745] N86-19152
FREE ELECTRON LASERS
Nonlinear analysis of Ubitron/Free-Electron laser amplifiers in three-dimensions
[AD-A160631] N86-18722
Partially coherent X-rays from modern storage rings
[DE85-011157] N86-18724
FREE FLOW
Two-dimensional Helmholtz flow about a flat plate and related shapes
[AD-A160806] N86-18295
FREE JETS
Aeronautical facilities catalogue. Volume 2: Airbreathing propulsion and flight simulators
[NASA-RP-1133] N86-18328
FREE RADICALS
Viscosity rise during free radical crosslinking polymerization with inhibition
[AD-A159842] N86-18444
Experimental studies in molecular fragmentation: Processes, energetics and diagnostics
[AD-A160745] N86-19152
FREEZING
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
FRENCH SPACE PROGRAMS
The French sounding rocket and balloon space research program N86-18813
FREQUENCIES
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Schottky barrier infrared detector and process
[AD-D011925] N86-18807
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137
FREQUENCY ASSIGNMENT
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341
FREQUENCY CONTROL
Digital phase-locked loop speed control for a brushless dc motor
[AD-A159977] N86-18614
FREQUENCY CONVERTERS
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137
FREQUENCY MODULATION
Numerical modeling study of gain and downward radiation for selected FM and VHF TV broadcast antenna systems
[PB85-238046] N86-18606
FREQUENCY MULTIPLIERS
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
FREQUENCY SHIFT
Optical interarray processing
[AD-A160256] N86-19192
FRICTION
A study of metal adhesion
[CE-TRANS-8026] N86-18480
Assessment of government tribology programs
[DE86-001121] N86-18739
FROSTBITE
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970
FROUDE NUMBER
Subdivision Froude number
[AD-A160486] N86-18674
FUEL CELL POWER PLANTS
Onsite 40-kilowatt fuel cell power plant manufacturing and field test program
[NASA-CR-174988] N86-18773
FUEL CELLS
Onsite 40-kilowatt fuel cell power plant manufacturing and field test program
[NASA-CR-174988] N86-18773
FUEL OILS
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801

FUNCTIONAL INTEGRATION
Effective Lagrangian for the linear sigma model at m/sub sigma/ (YIELDS) infinity
[DE86-001328] N86-19088
FUSELAGES
Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321
FUSION REACTORS
Alloy development for irradiation performance
[DE85-018142] N86-19181

G

GALACTIC EVOLUTION
Supermassive star formation: The early phases N86-19270
Compact configurations within small evolving groups of galaxies N86-19271
GALAXIES
Compact configurations within small evolving groups of galaxies N86-19271
GALLIUM
GaP/Al/sub x/Ga/sub 1-x/P heterojunction semiconductor controlled rectifier for high-temperature electronic applications
[DE86-000204] N86-18641
GALLIUM ARSENIDES
Method of making self-aligned IGFET
[AD-D011926] N86-18608
Microwave semiconductor research - materials, devices and circuits
[AD-A160581] N86-18624
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
Effect of hydrostatic pressure on defect annealing in semiconductors
[DE85-015149] N86-19235
GARBAGE
A garbage collector for a large distributed address space
[AD-A160645] N86-19035
GAS CHROMATOGRAPHY
Picogram FT-IR: Ultramicrosampling and GC-IR
[DE85-016440] N86-18474
GAS DENSITY
Association/dissociation processes in dense gases
[AD-A160236] N86-19148
GAS DETECTORS
Developments in gas detectors for synchrotron X-ray radiation
[DE86-001207] N86-18705
GAS DISSOCIATION
Association/dissociation processes in dense gases
[AD-A160236] N86-19148
GAS DYNAMICS
Fundamental processes in partially ionized plasmas
[AD-A160011] N86-19212
GAS RECOVERY
Open-cycle vapor compression heat pump
[PB85-222529] N86-18684
GAS STREAMS
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646
GAS TRANSPORT
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976
GAS TUNGSTEN ARC WELDING
Welding procedure specification: Gas tungsten arc welding of aluminum alloys 1XXX and 3003
[DE86-001508] N86-18764
Welding procedure specification: Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium-molybdenum
[DE86-001517] N86-18765
GAS TURBINE ENGINES
Surface hardening of gas turbine engine vanes in an ultrasonic field N86-18541
Ceramic Technology for Advanced Heat Engines Project
[DE86-001365] N86-18568
GAS TURBINES
Catalytic combustion of gas turbines: Process modelling and kinetic study of iso-octane oxidation N86-18326
GASES
Annual Gaseous Electronics Conference (37th): Program and abstracts
[AD-A159928] N86-19147
GASTROINTESTINAL SYSTEM
Review of duodenal and gastric ulcer
[AD-A160919] N86-18977
GATES (CIRCUITS)
Method of making self-aligned IGFET
[AD-D011926] N86-18608
GELS
Binary liquid gels
[DE85-014953] N86-18473
GENERAL AVIATION AIRCRAFT
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
Aircraft accident reports: Brief formats, US civil and foreign aviation, issue number 1 of 1984 accidents
[PB85-916920] N86-18309
Aircraft accident reports: Brief format US Civil and Foreign Aviation, issue 2 of 1984 accidents
[PB85-916921] N86-18310
Sukhoy design bureau builds sport plane made of plastic N86-18324
Features of planned IL-96-300, IL-114 aircraft N86-18325
GENERATORS
UW/NW (University of Washington/Northwest) VLSI Consortium
[AD-A160292] N86-18997
GENETIC ENGINEERING
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956
GENETICS
Molecular approaches to selective immunization
[AD-A160141] N86-18954
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] N86-18968
Review of duodenal and gastric ulcer
[AD-A160919] N86-18977
GEOCHEMISTRY
Development of performance assessment methodology for nuclear waste isolation in geologic media
[TI85-017813] N86-19167
GEODETIC SATELLITES
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881
GEODETIC SURVEYS
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881
GEOGRAPHIC INFORMATION SYSTEMS
Access to inter-organization computer networks
[AD-A160855] N86-19051
GEOLOGICAL FAULTS
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810
GEOLOGICAL SURVEYS
Future Modular Optoelectronic Multispectral Scanner (MOMS) developments: Discussion of improvements and possibilities to be expected for geological applications N86-18366
Long linear features observed on the Alpine orogen and their comparison with some geophysical data --- landsat satellites N86-18382
Monitoring of ground fractures caused by volcanic eruptions using remote sensing techniques N86-18383
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810
Geologic and hydrologic characterization and evaluation of the basin and range province relative to disposal of high-level radioactive waste. Part 3: Geologic and hydrologic evaluation
[TI85-901876] N86-19168
Evaluation of geologic and geophysical techniques for surface-to-subsurface projections of geologic characteristics in crystalline rock
[DE86-000221] N86-19172
GEOLOGY
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625
GEOMAGNETISM
Geomagnetic activity and solar cycle N86-18859
GEOMETRIC RECTIFICATION (IMAGERY)
Aerotriangulation with Spacelab Metric Camera images N86-18360
Geometric rectification and photogrammetric reconstruction of SPOT images N86-18384
GEOMETRICAL OPTICS
Different problems of space stereoscopic observation N86-18378
GEOMETRY
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
INGRID: A three-dimensional mesh generator for modeling nonlinear systems
[DE86-000749] N86-19005
Moving average models with bivariate exponential and geometric distributions
[AD-A160178] N86-19071
GEOPHYSICAL OBSERVATORIES
Geophysical radar altimeters for the 1990's --- satellite-borne N86-18375
GEOPHYSICS
Electromagnetic measurements of multi-year sea ice using impulse radar
[AD-A160737] N86-18598
Evaluation of geologic and geophysical techniques for surface-to-subsurface projections of geologic characteristics in crystalline rock
[DE86-000221] N86-19172
GEOPOTENTIAL
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
GEOTHERMAL ENERGY CONVERSION
Preliminary considerations for extraction of thermal effect from magma
[DE85-009341] N86-18781
GEOTHERMAL TECHNOLOGY
CSDP: The seismology of continental thermal regimes
[DE86-000214] N86-18887
GLARE
Correction of veiling glare in HIPPARCOS observations N86-18409
GLASS
Plasticization of glassy polymers by CO(2)
[AD-A159772] N86-18545
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548
Memoirs of the Faculty of Engineering, Hokkaido University, volume 16, no. 4(no. 73)
[ISSN-0368-9379] N86-18575
Preparation of mica glass-ceramics by crystallization of fluorphlogopite-fluormuscovite glass N86-18577
Investigation of Re-X glass ceramic for acceleration insulating columns
[DE86-000598] N86-18639
Silver/glass mirrors for solar thermal systems
[DE85-000537] N86-18785
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
GLASS FIBER REINFORCED PLASTICS
Study of crack resistance of corrosion-resistant glass-reinforced plastics by acoustical emission methods N86-18516
Properties of carbon-glass plastic material under pure flexure N86-18519
Comparative creep analysis of unidirectionally oriented composite materials with various kinds of reinforced fibers N86-18520
GLASS LASERS
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713
GLOBAL POSITIONING SYSTEM
Monitoring of GPS (Global Positioning System) system performance
[PB85-242980] N86-18315
GLUCOSE
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] N86-18978
GOLD
Comparison between surface-enhanced Raman and surface infrared spectroscopies for strongly perturbed adsorbates: Thiocyanate at gold electrodes N86-18462
[AD-A159954]
Surface-enhanced Raman spectroscopy as a probe of adsorbate-surface bonding: Benzene and monosubstituted benzenes adsorbed at gold electrodes
[AD-A159978] N86-18463
Metal cluster topology: Applications to gold and platinum clusters
[AD-A160637] N86-18498

GONIOMETERS
X-ray goniometer
[AD-D011927] N86-18685
GOVERNMENTS
Indianapolis technical innovation program: Program results N86-19266
GRADIENTS
Comparison of two MTF measurement methods: Sine-wave versus edge gradient analysis
[AD-A160800] N86-18700
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
Correlation analysis of the Taurus molecular cloud complex N86-19272
GRAIN BOUNDARIES
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
GRAIN SIZE
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
GRAMMARS
A mechanism for natural language database N86-19252
GRANITE
Nonlinear wave propagation study
[AD-A160179] N86-18879
GRANULAR MATERIALS
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
GRAPH THEORY
Metal cluster topology: Applications to gold and platinum clusters
[AD-A160637] N86-18498
Chemical applications of topology and group theory. 19: The even permutations of the ligands in five-coordinate complexes viewed as proper rotations of the regular icosahedron
[AD-A160747] N86-19153
GRAPHITE
Graphite fiber intercalation: Basic properties of copper chloride intercalated fibers
[NASA-TM-87217] N86-18442
Effect of graphite cocrystallization growth of diamond single crystals in metal-carbon system N86-18536
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797
GRAPHITE-EPOXY COMPOSITES
The 737 graphite composite flight spoiler flight service evaluation
[NASA-CR-172600] N86-18448
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
GRAPHS (CHARTS)
On using inverted trees for updating graph properties
[AD-A160135] N86-19019
On the maximum-weight clique problem
[AD-A159953] N86-19069
Limiting behavior of the norm of products of random matrices and two problems of Geman-Hwang
[AD-A160208] N86-19076
SPADE (series parallel directed acyclic graph evaluator): A tool for performance and reliability evaluation, revision
[AD-A160289] N86-19113
GRASSES
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
GRAVIMETRY
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881
GRAVITATION
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
GRAVITATIONAL EFFECTS
Practical aspects of measuring dry deposition
[DE85-018465] N86-18802
Compact configurations within small evolving groups of galaxies N86-19271
GRAVITATIONAL FIELDS
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
A statistical gravity model for northern Texas
[AD-A160474] N86-18883
GRAVITY GRADIOMETERS
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881
A statistical gravity model for northern Texas
[AD-A160474] N86-18883
GRAZING INCIDENCE
Plane wave scattering by thin linear dielectric-coated wires and dielectric strips: A moment method approach with physical basis functions N86-18581
GREEN'S FUNCTIONS
The Phi 2 to the 4th power equations of motion. Part 1: Sign and splitting properties. Definition of Phi lambda-subsets
[REPT-52-A-PT-1] N86-19243
GRINDING (COMMINUTION)
Treatment of metal powders in attrition machines
[BLL-M-36420-(5282.4F)] N86-18485
Surface stress modification for repair of stress-relieved carbon steel fabrications
[DE86-000563] N86-18507
GROUND BASED CONTROL
Calibration of an on-ground aircraft tracking radar by aerial photogrammetry
[NAL-TR-861] N86-18311
GROUND SUPPORT SYSTEMS
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB
[AD-A160561] N86-18339
GROUND TESTS
Development and application of dynamic simulations of a subsonic wind tunnel
[NASA-TM-87211] N86-18336
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449
GROUND WATER
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
Water resources data for Maine, water year 1984
[PB85-240265] N86-18771
Suitability of polyvinyl chloride pipe for monitoring TNT, RDX, HMX, and DNT in groundwater
[AD-A160733] N86-18798
GROUND WIND
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Soesterberg, Netherlands. Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
Central American climatology
[AD-A159669] N86-18915
Low-level wind systems in the Warsaw Pact countries
[AD-A160144] N86-18916
GROUP DYNAMICS
An annotated bibliography of literature integrating organizational and systems theory
[AD-A160912] N86-19249
GROUP THEORY
Chemical applications of topology and group theory. Twenty 8-vertex polyhedra and their rearrangements
[AD-A160589] N86-18469
Class groups of orders and Chow groups of their Brauer-Severi schemes
[CTH-MATH-1985-15] N86-19094
Chemical applications of topology and group theory. 19: The even permutations of the ligands in five-coordinate complexes viewed as proper rotations of the regular icosahedron
[AD-A160747] N86-19153
GROUT
Development of a sanded expansive salt grout for repository sealing application
[AD-A160431] N86-18552
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
GROWTH
Investigation of temperature dependence of growth rate of oxide films on tantalum by method of interference indication
[BLL-M-36385-(5828.4)] N86-18455
GUIDANCE SENSORS
Independent research and development: Infrared sensor technology program test plan
[AD-A160061] N86-18691
GULF OF MEXICO
U.S. Navy climatic study of the Caribbean Sea and Gulf of Mexico. Volume 1: West Caribbean Sea and Central American waters
[AD-A160159] N86-18917
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86-18926
GUN PROPELLANTS
Critical analysis of nitramine decomposition data. Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
GUNS (ORDNANCE)
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493
An analytic process model for systems design and measurement
[AD-A160472] N86-19031
GYROFREQUENCY
Waves below the proton gyrofrequency in a multicomponent plasma
[KGI-PREPRINT-189] N86-19209

H

HALL EFFECT
Studies of structure and transport in quasi-one dimensional conductors N86-19226
HALOS
Compact configurations within small evolving groups of galaxies N86-19271
HAMILTONIAN FUNCTIONS
Hamiltonian structures underlying MHD equilibria
[DE86-001236] N86-19218
HARBORS
USSR report: Transportation
[JPRS-UTR-85-015] N86-18923
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18928

HARDENING (MATERIALS)
Investigation of rapidly quenched rare Earth iron alloys for permanent magnets
[AD-A159946] N86-18494
HARDNESS
improving performance of hard-alloy plates by thermomagnetic abrasion treatment N86-18539
HARDNESS TESTS
A device for testing metal hardness at high temperatures N86-18511
HARMONIC ANALYSIS
Directional wave measurement and analysis
[AD-A160760] N86-18947
Maximum entropy pole-zero estimation
[AD-A160655] N86-19116
HARMONIC GENERATORS
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
HARMONICS
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19106
HARNESSES
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
HAWAII
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Hickam AFB, Hawaii
[AD-A159730] N86-18906
HAZARDS
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] N86-18955
Practical application of basic research on impulse noise hazard
[AD-A160432] N86-18954
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975
HEALTH
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975
Basics of searching MEDLINE: A guide for the health professional
[PB85-232650] N86-19262
HEARING
Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study
[AD-A160799] N86-18974
A comparison of dichotic listening task scoring methods
[AD-A159920] N86-18980
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137
HEART DISEASES
An investigation into effects of environmental changes on locus of control
[AD-A160861] N86-18967
HEAT ACCLIMATIZATION
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] N86-18967
HEAT EXCHANGERS
Development of high effectiveness droplet heat exchangers
[DE85-013352] N86-18677
Preliminary considerations for extraction of thermal effect from magma
[DE85-009341] N86-18781
IPNS grooved, solid methane moderator
[DE85-018401] N86-19222
HEAT FLUX
Double wall artery heat pipe
[AD-A160012] N86-18671
HEAT MEASUREMENT
Plasticization of glassy polymers by CO(2)
[AD-A159772] N86-18545
HEAT OF VAPORIZATION
Vapor pressure of methylphosphonic dichloride: A compendium
[AD-A160613] N86-18447
HEAT PIPES
Double wall artery heat pipe
[AD-A160012] N86-18671
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
Heat pipe space nuclear reactor design assessment. Volume 1: Design status of the SP-100 heat pipe space nuclear reactor system
[AD-A160279] N86-19164
Heat pipe space nuclear reactor design assessment. Volume 2: Feasibility study of upgrading the SP-100 heat pipe space nuclear power system
[AD-A160280] N86-19165
HEAT PUMPS
Open-cycle vapor compression heat pump
[PB85-222529] N86-18684
Evaluation of advanced design concepts for absorption heat pumps
[DE85-005090] N86-18780
The performance of a residential heat pump operating with a nonazeotropic binary refrigerant mixture
[DE85-005245] N86-18782
Dual-stroke heat pump field performance
[DE85-005247] N86-18783
HEAT STORAGE
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 3
[DE86-001120] N86-18789
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 2
[DE86-001119] N96-18792
HEAT TOLERANCE
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] N86-18967
HEAT TRANSFER
Stagnation-point heat transfer from jet flames
[TI85-011376] N86-18676
Development of high effectiveness droplet heat exchangers
[DE85-013352] N86-18677
Effects of two-phase flow in shaft seals N86-18727
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] N86-18965
IPNS grooved, solid methane moderator
[DE85-018401] N86-19222
HEAT TREATMENT
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Effect of hardening treatments on microfluidity of steels and bronzes N86-18529
A new polymer for the heat-treatment shop and the operating room N86-18540
Memoirs of the Faculty of Engineering, Hokkaido University, volume 16, no. 4(no. 73)
[ISSN-0368-9379] N86-18575
Preparation of mica glass-ceramics by crystallization of fluorphlogopite-fluormuscovite glass N86-18577
HEATING
Active control of compressible flows on a curved surface
[NASA-CR-178018] N86-18648
HEAVY IONS
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel
[DE85-016636] N86-19155
A superconducting heavy ion injector linac
[DE85-013897] N86-19156
HEIGHT
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
A parameterized procedure for determining real height from ionograms by use of generalized parabolic profiles
[AD-A160383] N86-19121
HELICAL FLOW
Acoustic research report
[AD-A159900] N86-19128
HELICOPTER ENGINES
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160662] N86-18322
HELICOPTERS
Compressible, unsteady lifting-surface theory for a helicopter rotor in forward flight
[NASA-TP-2503] N86-18289
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18319
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127
HELIOSTATS
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 3
[DE86-001120] N86-18789
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 2
[DE86-001119] N86-18792
HELIPORTS
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127
HELIUM
Analysis for impurities in helium using the helium ionization detector, report of investigations 1985
[PB85-245157] N86-18476
Distortion of He emission lines after fast-ion collisions
[DE85-018347] N86-19181
Helium scattering studies of the surface structure and dynamics of rare gas crystals
[AD-A159942] N86-19232
HELIUM FILM
Determination of the surface phonon dispersion relations for monolayer, bilayer, trilayer and thick Kr(111) films physisorbed on Ag(111) by inelastic He scattering
[AD-A159761] N86-19229
HEMATOPOIESIS
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] N86-18959
HEMATOPOIETIC SYSTEM
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
HEMOSTATICS
A new polymer for the heat-treatment shop and the operating room N86-18540
HERMITIAN POLYNOMIAL
Hermitian and nonnegativity preserving subspaces
[AD-A160294] N86-19081
HETEROJUNCTIONS
GaP/Al/sub x/Ga/sub 1-x/P heterojunction semiconductor controlled rectifier for high-temperature electronic applications
[DE86-000204] N86-18641
Zinc-diffused narrow stripe AlGaAs/GaAs double heterostructure laser
[AD-D011943] N86-18709
HEURISTIC METHODS
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
HEWLETT-PACKARD COMPUTERS
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050
Description of the low speed wind tunnel laboratory computer
[VTH-M-489] N86-19054
HIERARCHIES
Foundations of knowledge for distributed systems
[AD-A160233] N86-19024
HIGH ALTITUDE
The importance of precision radar tracking data for the determination of density and winds from the high-altitude inflatable sphere N86-18819
Use of satellite data to monitor high-altitude winds N86-18845
High-Altitude Recovery Program (HARP) — sounding rocket payloads N86-18886
HIGH ALTITUDE BALLOONS
Technical and operational improvements at French balloon launching centers N86-18862
HIGH ENERGY INTERACTIONS
New meson-nucleus dynamics from studies of (pion, eta meson) (pion, 2 pion)
[DE85-012753] N86-19166
High energy accelerator and colliding beam user group
[DE85-008093] N86-19219
Technical advisory on SSC site criteria and catalog of site information needs
[DE86-000216] N86-19223
HIGH LEVEL LANGUAGES
Performance evaluation of the JRS automatic microcode generating system
[AD-A159671] N86-19011
Replication and fault-tolerance in the ISIS system, revised
[AD-A160039] N86-19016
HIGH POWER LASERS
Generation of underwater sound by a moving high-power laser source
[AD-A160900] N86-19138
HIGH PRESSURE
Surface characteristics and molar volume of FeCl2-MeCl (Me = Li, Na, K, Rb, Cs) systems
[BLLD-M-36470-(5828.4)] N86-18456

Spectroscopic studies of carbon disulfide at high pressure
[AD-A160456] N86-18468
Test plan for high temperature/high pressure acoustic agglomerator
[DE85-017221] N86-18704

HIGH RESOLUTION
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149

HIGH SPEED
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629

HIGH STRENGTH STEELS
Tasks of accelerating scientific and technical progress in metal science of high-grade steels
[BLL-M-36465-(5828.4)] N86-18481
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159682] N86-18752
Rocket motor cases in 300 M steel: A pioneer development performed in the Brazilian space program N86-18867

HIGH TEMPERATURE
A device for testing metal hardness at high temperatures N86-18511
Effect of prolonged high temperature aging on operating properties of 15Kh1M1F steel N86-18534
Test plan for high temperature/high pressure acoustic agglomerator
[DE85-017221] N86-18704

HIGH TEMPERATURE ENVIRONMENTS
Temporal stability of solid oxidizers at high temperature and humidity
[AD-A159735] N86-18458

HIGH TEMPERATURE NUCLEAR REACTORS
Heat pipe space nuclear reactor design assessment. Volume 1: Design status of the SP-100 heat pipe space nuclear reactor system
[AD-A160279] N86-19164

HIGH TEMPERATURE PLASMAS
Fundamental processes in partially ionized plasmas
[AD-A160011] N86-19212
Research on plasma physics
[AD-A160425] N86-19213

HIGH TEMPERATURE TESTS
Rocket motor cases in 300 M steel: A pioneer development performed in the Brazilian space program N86-18867

HIGH VOLTAGES
High voltage picosecond pulse generation utilizing lasers
[AD-A159923] N86-18711

HIGHWAYS
USSR report: Transportation
[JPRS-UTR-85-014] N86-18284
USSR report: Transportation
[JPRS-UTR-85-015] N86-18323

HINGES
Optimization of mechanisms for force generation by using pulleys and spring
[AD-A159944] N86-18730

HIPPARCOS SATELLITE
The European Astrometry Satellite HIPPARCOS: Scientific Aspects of the Input Catalog Preparation --- conferences
[ESA-SP-234] N86-18388
The present status of the HIPPARCOS project N86-18389
Performances of HIPPARCOS optical telescope N86-18390
The HIPPARCOS data reductions: Principles and limitations N86-18391
Status of the Fundamental Astronomy by Space Techniques (FAST) data processing chain N86-18392
The Stellar Data Center (CDS) and HIPPARCOS: Afterthoughts N86-18393
Present status of the Input Catalog --- HIPPARCOS mission N86-18395
The INCA data base: Sub-base from Set of Identifications, Measurements and Bibliography for Astronomical Data (SIMBAD) --- HIPPARCOS N86-18396
Definition of the survey --- HIPPARCOS Input Catalog N86-18397
Simulations: The role played by static pressures --- HIPPARCOS input catalog N86-18398
Optimizing the Input Catalog through simulations --- HIPPARCOS N86-18399
Expected fulfillments of observation proposals versus ESA priority --- HIPPARCOS N86-18400
Astrophysical aspects of the contents of the Input Catalog --- HIPPARCOS N86-18401
The HIPPARCOS Input Catalog (INCA): Simulation of observations over a long period N86-18402
Optimizing the observing strategy through simulations --- HIPPARCOS N86-18403
Existing data on candidate stars for the HIPPARCOS Input Catalog: Present status and developments N86-18404
Photometric data related to the formation of the Input Catalog --- HIPPARCOS N86-18405
Standard stars for the on-orbit photometric payload calibration --- HIPPARCOS N86-18406
New ground-based photometric observations --- HIPPARCOS calibrations N86-18407
Correction of veiling glare in HIPPARCOS observations N86-18409
Stars in the direction of the Magellanic Clouds --- HIPPARCOS N86-18410
Selection of stars in open clusters for the HIPPARCOS mission N86-18411
The HIPPARCOS proper motions for open star clusters N86-18412
Concerns, realizations and prospects of the subgroup double stars of the HIPPARCOS Input Catalog (INCA) consortium N86-18413
New wide double stars in the HIPPARCOS Input Catalog N86-18414
Observability of spectroscopic double stars by HIPPARCOS N86-18415
Minor planets in the HIPPARCOS program N86-18416
Complementary astrometric observations of minor planets at Barcelona --- HIPPARCOS N86-18417
The Astronomisches Rechen-Institut (ARI) catalog of astrometric data for the HIPPARCOS Input Catalog N86-18418
Astrometric data for nearby stars --- HIPPARCOS N86-18419
Only two years left to supply accurate positions to the HIPPARCOS nonastrometric stars N86-18420
Carlsberg automatic transit circle observations for INCA --- HIPPARCOS Input Catalog (INCA) N86-18421
Meridian observation of the faint stars proposed for HIPPARCOS N86-18422
The status of the SRS --- Southern Reference Stars (SRS) HIPPARCOS N86-18423
Radial velocities for HIPPARCOS with the Fehrenbach objective prisms N86-18424
Radial velocity measurements of late-spectral-type stars --- HIPPARCOS N86-18425
Complementary photometric observations for HIPPARCOS N86-18426
Overview of TYCHO data analysis --- HIPPARCOS N86-18427
The TYCHO Input Catalog and the guide star catalog of the Space Telescope --- HIPPARCOS N86-18428
Report by Subgroup 2130 (link to extragalactic reference objects) --- HIPPARCOS N86-18429
A critical examination of radio star data --- HIPPARCOS Input Catalog N86-18430
Relating the HIPPARCOS reference frame to the radio reference frame via Very Large Array (VLA) measurements of the precise position of stellar radio emission N86-18431
Milliarcsecond structures, VLBI and optical positions of 8 HIPPARCOS radio stars N86-18432
Radio observations of HIPPARCOS stars N86-18433
Using Space Telescope to tie the HIPPARCOS and extragalactic reference frames together N86-18434

HISS
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone
[KGI-PREPRINT-081] N86-19208

HISTOLOGY
Rapid identification of micro-organisms
[AD-A159945] N86-18952

HMX
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Binder study for HMX/TATB explosives
[DE86-001235] N86-18573

HOLES (ELECTRON DEFICIENCIES)
Laser physics and laser techniques
[AD-A160143] N86-18714

HOLOGRAPHIC INTERFEROMETRY
Preliminary study of holographic interferometry applied to carbon fibre specimens
[AD-A160770] N86-18698

HOMEOSTASIS
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] N86-18959

HOMOLOGY
Class groups of orders and Chow groups of their Brauer-Severi schemes
[CTH-MATH-1985-15] N86-19094

HONEYCOMB STRUCTURES
Stressed-strained state of triple-layer honeycomb panels with carbon-plastic sheaths N86-18521

HOT CORROSION
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646

HOT PRESSING
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493

HOT STARS
Radial velocities for HIPPARCOS with the Fehrenbach objective prisms N86-18424
The absolute fluxes of six hot stars in the ultraviolet (912 - 1600 angstroms) N86-19269

HOT WORKING
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493
Effect of prolonged high temperature aging on operating properties of 15Kh1M1F steel N86-18534

HUBBLE SPACE TELESCOPE
The TYCHO Input Catalog and the guide star catalog of the Space Telescope --- HIPPARCOS N86-18428
Using Space Telescope to tie the HIPPARCOS and extragalactic reference frames together N86-18434

HUMAN BEHAVIOR
Multimodal versus unimodal information processing of words
[AD-A160517] N86-18984

HUMAN BEINGS
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976
Beyond associations: Strategic components in memory retrieval
[AD-A160783] N86-18985
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060

HUMAN FACTORS ENGINEERING
Evaluation of the ocean technology system's MK 1-S wireless surface unit, MK 1 DCI two diver air radio, MK 1-D-A wireless diver unit, MK 1-D-H hardwire diver unit and MK 1-D/S unit
[AD-A160480] N86-18595

HUMAN PERFORMANCE
Night vision manual for the flight surgeon
[AD-A159720] N86-18961
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] N86-18965
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973
A comparison of dichotic listening task scoring methods
[AD-A159920] N86-18980
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] N86-18983

HUMIDITY
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
Temporal stability of solid oxidizers at high temperature and humidity
[AD-A159735] N86-18458
Evaluation of irreversible humidity indicator
[AD-A159840] N86-18689
An optical waveguide humidity detector
[AD-A160577] N86-18695

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Soesterberg, Netherlands Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Riyadh Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
A comparison of moisture variables in the vertical interpolations of a 4-D assimilation system
[AD-A160464] N86-18925
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18930
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233

HUMIDITY MEASUREMENT
Humidity sensing and measurement employing halogenated organic polymer membranes
[PB85-246866] N86-18706

HURRICANES
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86-18926

HYDRATES
Thermal stability of certain hydrated phases in systems made using portland cement
[AD-A160443] N86-18553
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559

HYDRAULIC JETS
Deburring of metal workpieces with directed high pressure water jets. Basis and application limits
[KFK-PFT-107] N86-18741
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938

HYDRAULIC TEST TUNNELS
Dynamic characteristics of the 48-inch water tunnel drive pump
[AD-A159904] N86-18668

HYDROCARBONS
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-018490] N86-18931

HYDRODYNAMIC COEFFICIENTS
Directional wave measurement and analysis
[AD-A160760] N86-18947

HYDRODYNAMIC EQUATIONS
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667

HYDRODYNAMICS
Reflected impulse near spherical charges
[AD-A160797] N86-18572
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672

HYDROFOILS
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672

HYDROGEN
Spectroscopy of metal/titania systems
[AD-A160698] N86-18499
Effect of medium pH on hydrogen permeability of passivating films and rate of growth of corrosion cracks in 40KhN steel N86-18524
Role of martensite conversion in hydrogen embrittlement of unstable austenite steels N86-18525
Stagnation-point heat transfer from jet flames
[TI85-011376] N86-18676
Investigation of the spatially anisotropic component of the laterally averaged molecular Hydrogen/Ag(111) physisorption potential
[AD-A159726] N86-19228

HYDROGEN EMBRITTLEMENT
The role of metallurgical variables in controlling hydrogen embrittlement
[AD-A160446] N86-18496

HYDROGENATION
Catalytic hydrogenation of carbon monoxide
[DE86-001547] N86-18475
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497

HYDROGRAPHY
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86-18926

HYDROLOGY
Satellite remote sensing in hydrology N86-18358
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
Geologic structure of the surficial aquifer system underlying Everglades National Park and Big Cypress National Preserve
[PB85-247609] N86-18772
Geologic and hydrologic characterization and evaluation of the basin and range province relative to disposal of high-level radioactive waste. Part 3: Geologic and hydrologic evaluation
[TI85-901876] N86-19168

HYDROMETEOROLOGY
Application of METEOSAT data for remote sensing of Earth resources: EARSeL Working Group 7 report --- agrometeorology in drought areas N86-18357

HYDROPHONES
Microbending fiber optic acoustic sensor
[AD-D011938] N86-19124

HYDROSTATIC PRESSURE
Effect of simple stress on the glass transition of polymers at high pressure
[AD-A160282] N86-18549
The effects of hydrostatic pressure on optical fibers (fiscal year 1983 report)
[AD-A159915] N86-19191
Effect of hydrostatic pressure on defect annealing in semiconductors
[DE85-015149] N86-19235

HYDROXIDES
Small angle neutron scattering data on cements with pozzolanic additives
[AERE-R-11609] N86-19162

HYDROXYL EMISSION
Airglow O2(1 Sigma) atmospheric band at 8645 Angstrom and the rotational temperature observed at 23 deg S
[INPE-3631-PRE/811] N86-18809

HYPERBOLIC DIFFERENTIAL EQUATIONS
Application of spectral methods to compressible and incompressible fluid dynamics N86-18663
The numerical viscosity of entropy stable schemes for systems of conservation laws
[NASA-CR-178021] N86-19065

HYPERGEOMETRIC FUNCTIONS
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673

HYPERSONIC HEAT TRANSFER
Analysis of heat-transfer measurements from two AEDC wind tunnels on the shuttle external tank
[AD-A160406] N86-18331

HYPOTHESES
Bounds on distributions arising in order restricted inference: The partially ordered case
[AD-A159872] N86-19098
Why bother with experiments?
[AD-A160634] N86-19248

HYSTERESIS
Axial compressor reversed flow performance
[AD-A160773] N86-18327
Investigation of rapidly quenched rare Earth iron alloys for permanent magnets
[AD-A159046] N86-18494

I

ICE FORMATION
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
Some microphysical processes affecting aircraft icing
[AD-A160375] N86-18921
Calculation of ice accretion on cylindrical rods according to Bain's model, and comparison with experimental results --- stratus clouds
[DFVLR-FB-85-46] N86-18933

ICE REPORTING
A radar altimeter and the validation of its data products over ice surfaces N86-18352

IGNEOUS ROCKS
Southeastern Regional geologic characterization report: Volume 1
[DE86-000409] N86-18886

ILLUMINANCE
Status of the light-induced effect in amorphous silicon material and in a-Si solar cells
[DE85-016857] N86-18790

IMAGE CONTRAST
Eye movements and spatial pattern vision
[AD-A160408] N86-18963

IMAGE ENHANCEMENT
Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029
Design, construction and initial application of a low-light-level imaging detector N86-19189

IMAGE FILTERS
Spectrally selective shutter mechanism
[AD-A160619] N86-19194

IMAGE FURNACES
Crystal growth furnace developed for floating zone experiments in sounding rockets N86-18836
Advanced mirror furnace for long rod samples --- sounding rockets N86-18838

IMAGE INTENSIFIERS
Scan line difference compression algorithm simulation study
[AD-A160846] N86-19036

IMAGE PROCESSING
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314
The development of automatic methods for handling SAR images over land N86-18354
Data compression techniques for remote sensing data handling N86-18355
Program of research in computer vision, image processing and architectures for image processing
[AD-A160248] N86-18694
Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159883] N86-18768
Planetary image conversion task
[NASA-CR-176534] N86-19267

IMAGE RECONSTRUCTION
Geometric rectification and photogrammetric reconstruction of SPOT images N86-18384
Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029

IMAGE RESOLUTION
Evaluation of ion microscopic spatial resolution and image quality
[AD-A160155] N86-18693
Comparison of two MTF measurement methods: Sine-wave versus edge gradient analysis
[AD-A160800] N86-18700

IMAGERY
Astro-array: A space-based, coherent radio interferometer array
[AD-A160783] N86-18344
IMAGES
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696
Toward a surface sketch
[AD-A159693] N86-18767
Evaluation techniques for X-ray mirrors and systems using visible light
[DE86-001206] N86-19199
IMAGING TECHNIQUES
Hypothesis integration in image understanding systems
[NASA-CR-176510] N86-18692
User's manual for Division 746's image processing system
[PB85-242394] N86-19046
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
Planetary image conversion task
[NASA-CR-176534] N86-19267
IMINES
Chemical modification of poly(ethylene imine) for polymeric electrolyte
[AD-A160482] N86-18554
IMMUNOLOGY
Immunomodulation by proteins of bordetella pertussis
[AD-A160078] N86-18953
Molecular approaches to selective immunization
[AD-A160141] N86-18954
IMPACT
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
IMPACT DAMAGE
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713
IMPACT LOADS
The Saab spinning rocket attitude control (SPINRAC): An attitude control system for obtaining low impact dispersion N86-18868
IMPROVEMENT
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-19830
IMPULSE GENERATORS
Random timer
[AD-D011937] N86-18687
IMPULSES
Reflected impulse near spherical charges
[AD-A160797] N86-18572
IMPURITIES
Analysis for impurities in helium using the helium ionization detector, report of investigations 1985
[PB85-245157] N86-18476
INCLUSIONS
Examples of the application of titanium nitride coatings on 6-5-2 steel tools for cutting steels with controlled inclusions
[BLL-RISLEY-TR-5221-(9091.9F)] N86-18487
INCOHERENT SCATTER RADAR
In-flight turbulence detection
[AD-A160380] N86-18923
INCOMPRESSIBLE FLOW
Vortex shedding from solid rocket motor propellant inhibitors N86-18569
The time-dependent incompressible Navier-Stokes equations via Finite Element Method (FEM) N86-18658
Application of spectral methods to compressible and incompressible fluid dynamics N86-18663
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673
INDENTATION
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159682] N86-18752
INDEPENDENT VARIABLES
Axial compressor reversed flow performance
[AD-A160773] N86-18327
A model of inhaled gas and vapor transport in the human lung
[AD-A160629] N86-18976
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] N86-19986
On structure determination for polynomial input-output differential systems
[AD-A160225] N86-19078
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160636] N86-19086
Bounds on distributions arising in order restricted inference: The partially ordered case
[AD-A159872] N86-19098
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110
INDEXES (DOCUMENTATION)
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
INDIAN OCEAN
Navy tactical applications guide. Volume 5, part 2: Indian Ocean (Arabian Sea/Bay of Bengal) weather analysis and forecast applications
[AD-A160781] N86-18928
INDIUM
Surface and interfacial properties of InP
[AD-A159912] N86-19230
INDIUM ARSENIDES
Manufacturing methods and technology (MANTECH) program: Supplement. Qualification testing of infrared detectors
[AD-A160455] N86-18619
INDIUM PHOSPHIDES
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
The effect of bulk traps on the InP (Indium Phosphide) accumulation type MISFET (Metal-Insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622
INDUCTION MOTORS
Metallic induction reaction engine
[AD-A160137] N86-18439
INDUSTRIAL MANAGEMENT
Access to inter-organization computer networks
[AD-A160855] N86-19051
INDUSTRIAL PLANTS
Access to inter-organization computer networks
[AD-A160855] N86-19051
INDUSTRIAL SAFETY
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800
Overview of DOE/ONS criticality safety projects
[DE86-001334] N86-19187
INDUSTRIAL WASTES
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
Development of a sanded nonsulfur expansive grout for repository sealing application
[AD-A160594] N86-18558
INELASTIC COLLISIONS
Investigation of the spatially anisotropic component of the laterally averaged molecular Hydrogen/Ag(111) physisorption potential
[AD-A159726] N86-19228
INELASTIC SCATTERING
Determination of the surface phonon dispersion relations for monolayer, bilayer, trilayer and thick Kr(111) films physisorbed on Ag(111) by inelastic He scattering
[AD-A159761] N86-19229
Helium scattering studies of the surface structure and dynamics of rare gas crystals
[AD-A159942] N86-19232
INERTIAL GUIDANCE
Star field simulator
[NASA-CR-176612] N86-19266
INERTIAL NAVIGATION
The 3He nuclear gyroscope
[AD-A159924] N86-18690
INFERENCE
Inference for stationary random fields given Poisson samples
[AD-A160191] N86-19106
INFORMATION DISSEMINATION
Communicating across barriers at home and abroad
[DE85-015729] N86-18603
Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports
[AD-A160409] N86-19256
Resource directory of DOE information organizations, revision 2
[DE84-015655] N86-19258
INFORMATION MANAGEMENT
Entity-based data base management systems N86-19253
Information technologies and social transformation
[PB85-240521] N86-19263
INFORMATION RETRIEVAL
Beyond associations: Strategic components in memory retrieval
[AD-A160783] N86-18985
Defense technical information center cataloging guidelines
[AD-A160100] N86-19255
Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports
[AD-A160409] N86-19256
Basics of searching MEDLINE: A guide for the health professional
[PB85-232650] N86-19262
INFORMATION SYSTEMS
Aircraft measurements and coordination in FASINEX
[AD-A160739] N86-18699
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
Scan line difference compression algorithm simulation study
[AD-A160846] N86-19036
Overview of DOE/ONS criticality safety projects
[DE86-001334] N86-19187
Defense technical information center cataloging guidelines
[AD-A160100] N86-19255
Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports
[AD-A160409] N86-19256
Resource directory of DOE information organizations, revision 2
[DE84-015655] N86-19258
International Energy R and D represented in the Energy Data Base, 1984
[DE85-016029] N86-19259
Information technologies and social transformation
[PB85-240521] N86-19263
INFORMATION THEORY
The concept of information in scientific computing — spectral approximation N86-18684
Automatic processing of Navy message narrative
[AD-A159670] N86-19056
Information technologies and social transformation
[PB85-240521] N86-19263
INFRARED DETECTORS
Schottky barrier infrared detector and process
[AD-D011925] N86-18607
Manufacturing methods and technology (MANTECH) program: Supplement. Qualification testing of infrared detectors
[AD-A160455] N86-18619
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697
INFRARED FILTERS
Spectrally selective shutter mechanism
[AD-A160619] N86-19194
INFRARED IMAGERY
Hybrid Schottky infrared focal plane array
[AD-D011934] N86-18686
INFRARED INSTRUMENTS
Hybrid Schottky infrared focal plane array
[AD-D011934] N86-18686
INFRARED PHOTOGRAPHY
Schottky barrier infrared detector and process
[AD-D011925] N86-18607
INFRARED RADAR
Remote sensing of oil on sea: Lidar and passive IR experiments N86-18370
INFRARED RADIATION
Design of the NSLS infrared beam line mirror no. 1
[DE85-018481] N86-19196
INFRARED REFLECTION
Surface infrared reflection-absorption spectroscopy using a tunable diode laser
[AD-A160145] N86-18715
INFRARED SPECTRA
Picogram FT-IR: Ultramicrosampling and GC-IR
[DE85-016440] N86-18474
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign — polar regions N86-18856
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149

INFRARED SPECTROMETERS
Picogram FT-IR: Ultramicrosampling and GC-IR
[DE85-016440] N86-18474
INFRARED SPECTROSCOPY
An optical multisensor combining mid IR laser scanner, and near IR multispectral scanner (LIMES) N86-18369
Comparison between surface-enhanced Raman and surface infrared spectroscopies for strongly perturbed adsorbates: Thiocyanate at gold electrodes
[AD-A159954] N86-18462
Spectroscopic studies of carbon disulfide at high pressure
[AD-A160456] N86-18468
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497
Surface infrared reflection-absorption spectroscopy using a tunable diode laser
[AD-A160145] N86-18715
INFRARED TRACKING
Independent research and development: Infrared sensor technology program test plan
[AD-A160061] N86-18691
INHIBITION
Viscosity rise during free radical crosslinking polymerization with inhibition
[AD-A159842] N86-18444
INHIBITORS
Effect of inhibitors on electrochemical conditions during tests of specimens of 40 Kh steel for static corrosion cracking resistance N86-18526
Vortex shedding from solid rocket motor propellant inhibitors N86-18569
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-018490] N86-18931
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxylinase
[AD-A160740] N86-18969
INJURIES
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] N86-18959
INKS
Fire-retardant decorative inks for aircraft interiors
[NASA-TM-88198] N86-18441
INPUT
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976
Multimodal versus unimodal information processing of words
[AD-A160517] N86-18984
INPUT/OUTPUT ROUTINES
Users guide for normal mode objective analysis of global data assimilation
[AD-A160373] N86-18998
Development of an accurate algorithm for EXP(Bt): Appendix
[AD-A160121] N86-19018
Guidelines for a minimal Ada Runtime Environment
[AD-A160451] N86-19030
Adaptive decentralized control
[AD-A160187] N86-19058
INSTRUCTORS
Structured exit interviews using MDS (Multidimensional scaling)
[AD-A160469] N86-19247
INSTRUMENT ORIENTATION
Calibration and use of five-hole flow direction probes for low speed wind tunnel application
[AD-A160262] N86-18330
INSTRUMENTS
Rapid identification of micro-organisms
[AD-A159945] N86-18952
INSULATION
New polymeric materials expected to have superior properties for space-based use
[AD-A160285] N86-18550
INSULATORS
Investigation of Re-X glass ceramic for acceleration insulating columns
[DE86-000598] N86-18639
INTEGRALS
Semicontinuous processes in multidimensional extreme value theory
[CTH-MATH-1985-7] N86-19118
INTEGRATED CIRCUITS
Computation of the radiation characteristics of a generalized phased array
[NASA-TM-87185] N86-18586
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
Microwave semiconductor research - materials, devices and circuits
[AD-A160581] N86-18624
Prototyping and small-volume parts through MOSIS (MOS Implementation System)
[AD-A160735] N86-18627
New multiple sheet resistance technology for thin film circuits
[DE85-016459] N86-18637
Conversion of an IC design capability from a mainframe to a workstation environment
[DE85-015488] N86-19053
INTELLIGIBILITY
The intelligibility of non-vocoded and vocoded semantically anomalous sentences
[AD-A160401] N86-18313
Evaluation of the ocean technology system's MK 1-S wireless surface unit, MK 1 DCI two diver air radio, MK 1-D-A wireless diver unit, MK 1-D-H hardwire diver unit and MK 1-D/S unit
[AD-A160480] N86-18595
Effects of noise and workload on a communication task
[AD-A160743] N86-18599
INTERCALATION
Graphite fiber intercalation: Basic properties of copper chloride intercalated fibers
[NASA-TM-87217] N86-18442
INTERFACES
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618
The effect of bulk traps on the InP (Indium Phosphide) MISFET accumulation type (Metal-Insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622
Diagnostic apparatus and method for use in the alignment of one or more laser means onto a fiber optics interface
[DE85-017756] N86-18725
Surface and interfacial properties of InP
[AD-A159912] N86-19230
Layered magnetic superlattices
[DE85-018368] N86-19236
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques, 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239
INTERFACIAL TENSION
Surface characteristics and molar volume of FeCl2-MeCl (Me = Li, Na, K, Rb, Cs) systems
[BLLD-M-36470-(5828.4)] N86-18456
INTERFEROMETERS
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
INTERFEROMETRY
Collision of Mach reflections with a 90 deg ramp in air and CO2
[UTIAS-290] N86-18645
INTERGALACTIC MEDIA
Using Space Telescope to tie the HIPPARCOS and extragalactic reference frames together N86-18434
INTERNAL COMBUSTION ENGINES
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Overview of free-piston Stirling SP-100 activities at the NASA Lewis Research Center
[NASA-TM-87224] N86-19264
INTERNATIONAL COOPERATION
International Energy R and D represented in the Energy Data Base, 1984
[DE85-016029] N86-19259
INTERPOLATION
The conformal representation of the NACA 642A015 profile
[VTH-M-502] N86-18298
On the interpolation method of Schoenberg and the calculation of profile coordinates
[VTH-M-452] N86-18302
A comparison of moisture variables in the vertical interpolations of a 4-D assimilation system
[AD-A160464] N86-18925
INTERPROCESSOR COMMUNICATION
Replication and fault-tolerance in the ISIS system, revised
[AD-A160039] N86-19016
Access to inter-organization computer networks
[AD-A160855] N86-19051
INTERSTELLAR MASERS
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
INTERSTELLAR MATTER
Supermassive star formation: The early phases N86-19270
INTERSTELLAR SPACE
Correlation analysis of the Taurus molecular cloud complex N86-19272
INTERTROPICAL CONVERGENT ZONES
Stratospheric water-vapor measurements on board long-duration balloons N86-18848
INVARIANCE
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696
INVERSIONS
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
INVESTIGATION
An investigation of Band 2 field strengths: The Northampton experiment
[BBC-RD-1985/6] N86-18582
An investigation into effects of environmental changes on locus of control
[AD-A160861] N86-18987
INVISCID FLOW
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673
IODINE LASERS
Transverse flow CW atomic iodine laser system
[AD-D011933] N86-18708
ION BEAMS
Studies of compound states of negative ions using laser beams
[AD-A160483] N86-18719
Experimental studies in molecular fragmentation: Processes, energetics and diagnostics
[AD-A160745] N86-19152
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel
[DE85-016636] N86-19155
The use of electron beam position modulation in auger depth profile analysis
[AD-A159712] N86-19163
ION CURRENTS
Spectral characteristics of positive ion-current fluctuations measured by ion probes --- polar atmosphere N86-18853
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160
ION CYCLOTRON RADIATION
Radio frequency vacuum feedthroughs for high-power ICRF heating applications
[DE85-016391] N86-19215
ION EXCHANGE RESINS
Dual mechanism bifunctional polymers for the complexation of lanthanides and actinides
[DE86-000094] N86-18565
ION IMPLANTATION
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
Effect of ion implantation on subsequent erosion and wear behavior of solids
[DE86-000088] N86-18506
Antistatic packaging material and steel substrates packaged therewith
[AD-D011939] N86-18729
ION MICROSCOPES
Evaluation of ion microscopic spatial resolution and image quality
[AD-A160155] N86-18693
ION PROBES
Spectral characteristics of positive ion-current fluctuations measured by ion probes --- polar atmosphere N86-18853
Turbulence characteristics as determined by cross correlation analysis --- atmospheric turbulence N86-18854
Middle atmosphere turbulence as determined by ion probes --- polar regions N86-18871
ION RECOMBINATION
Association/dissociation processes in dense gases
[AD-A160236] N86-19148
ION SOURCES
Noninterceptive beam diagnostics
[DE86-000791] N86-19176
ION STORAGE
Automated ion chromatography
[AD-A159764] N86-18460

ION TEMPERATURE
Nonisotropic temperature distributions in the auroral F-region as measured with EISCAT N86-18829
IONIC REACTIONS
Dual mechanism bifunctional polymers for the complexation of lanthanides and actinides
[DE86-000094] N86-18565
IONIC WAVES
Dispersion surfaces and ion wave instabilities in space plasmas
[KGI-PREPRINT-190] N86-19206
Electrostatic ion waves generated by ion loss-cone distributions in the magnetosphere
[KGI-PREPRINT-082] N86-19210
Resonant generation of ion waves on auroral field lines by positive slopes in ion velocity space
[KGI-PREPRINT-083] N86-19211
IONIZATION
Association/dissociation processes in dense gases
[AD-A160236] N86-19148
IONOGRAMS
A parameterized procedure for determining real height from ionograms by use of generalized parabolic profiles
[AD-A160383] N86-19121
IONOSPHERE
Laboratory simulation of the electrodynamic interaction of the tethered satellite with the ionosphere N86-18844
IONOSPHERIC CONDUCTIVITY
On the influence on high-latitude convection patterns of polarization electric fields N86-18824
IONOSPHERIC HEATING
High-Frequency (HF) wave activity observed beam injector from a rocket-borne electron accelerator
N86-18839
Examination of nonadiabatic effects during an electron beam experiment in the ionosphere N86-18840
IONOSPHERIC SOUNDING
The S19 guided sounding rocket S38 Trigger Optimized Repetition (TOR) N86-18841
IONS
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160
IOWA
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] N86-18986
IRIDIUM
Schottky barrier infrared detector and process
[AD-D011025] N86-18607
IRON
The application of chromium carbide to the surface of iron and steels
[BLL-M-36489-(5828.4)] N86-18477
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797
IRON ALLOYS
Certain features of fine structure in Fe-Ni alloys
N86-18483
Investigation of rapidly quenched rare Earth iron alloys for permanent magnets
[AD-A159946] N86-18494
The role of metallurgical variables in controlling hydrogen embrittlement
[AD-A160446] N86-18496
Influence of elastic-stress state created by coatings on the magnetic properties of the alloy Fe-3 percent Si
N86-18532
Welding procedure specification: Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium-molybdenum
[DE86-001517] N86-18765
IRON CHLORIDES
Surface characteristics and molar volume of FeCl2-MeCl (Me = Li, Na, K, Rb, Cs) systems
[BLLD-M-36470-(5828.4)] N86-18456
IRRADIATION
Transverse flow CW atomic iodine laser system
[AD-D011933] N86-18708
Alloy development for irradiation performance
[DE85-018142] N86-19181
Luminescence from metals and insulators
[DE86-001339] N86-19200
IRREVERSIBLE PROCESSES
Evaluation of irreversible humidity indicator
[AD-A159840] N86-18569
ISOLATION
Thermal stability of certain hydrated phases in systems made using portland cement
[AD-A160443] N86-18553
ISOMERIZATION
Synthesis of synthetic hydrocarbons via alpha olefins
[AD-A160386] N86-18446
ISOMERS
Synthesis of synthetic hydrocarbons via alpha olefins
[AD-A160386] N86-18446
ISOSTATIC PRESSURE
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493
ISOTHERMAL LAYERS
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497
ISOTOPES
New method for estimating isotopic ratios from pulse-counting mass spectrometric data
[DE86-000095] N86-19044
ISOTOPIC LABELING
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
Incorporation of radiohalogens via versatile organometallic reactions: Applications in radiopharmaceutical chemistry
[DE86-000087] N86-19184
ISOTROPIC MEDIA
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160
ITERATION
Numerical analysis
[AD-A160207] N86-19074
ITERATIVE SOLUTION
Marching iterative methods for the parabolized and thin layer Navier-Stokes equations
[NASA-CR-178028] N86-18650
Parallel matrix computations
[AD-A160240] N86-19025

J

JEANS THEORY
Supermassive star formation: The early phases
N86-19270
JET AIRCRAFT
The test loads sequences applied to the CT4 full scale fatigue test
[AD-A160736] N86-18320
Microburst wind shear models from the Joint Airport Weather Studies (JAWS)
[AD-A159758] N86-18910
JET AIRCRAFT NOISE
High velocity gas jet noise control N86-19123
Laboratory experiments on active suppression of advanced turboprop noise
[NASA-TM-87129] N86-19125
JET BLAST EFFECTS
Performance characteristics of an isolated coannular plug nozzle at transonic speeds
[NASA-TM-87606] N86-18292
JET ENGINES
High velocity gas jet noise control N86-19123
JET FLOW
Stagnation-point heat transfer from jet flames
[TI85-011376] N86-18676
JET LAG
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972
JIGS
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
JOINTS (JUNCTIONS)
An analytical investigation of a conceptual design for the station transverse boom rotary joint structure
[NASA-TM-87665] N86-18347
Mechanics of a two axes passive precision level monitor for machine tools: Volume 2
[AD-A160151] N86-18732
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755
JOURNAL BEARINGS
Study of journal bearing dynamics using 3-dimensional motion picture graphics
[NASA-TM-87205] N86-18647
JP-4 JET FUEL
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957

K

KERNEL FUNCTIONS
The amount of noise inherent in bandwidth selection for a kernel density estimator
[AD-A160235] N86-19107
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110
KERR ELECTROOPTICAL EFFECT
Electro-optical Kerr effect voltage measurements on multi-megavolt pulsed power accelerators
[DE85-016580] N86-19158
KINETIC ENERGY
Magnetically confined kinetic-energy storage ring: A new fundamental energy-storage concept
[DE85-007982] N86-18635
KINETIC THEORY
The L sup p estimates for the nonlinear space-homogeneous Boltzmann equation
[CTH-MATH-1985-12] N86-19091
On the Boltzmann equation in unbounded space far from equilibrium and the limit of zero mean free path
[CTH-MATH-1985-16] N86-19244
KINETICS
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
KLEIN-GORDON EQUATION
Space-time means and nonlinear Klein-Gordon equations
[CTH-MATH-1985-19] N86-19245
KNOWLEDGE
Foundations of knowledge for distributed systems
[AD-A160233] N86-19024
KOLMOGOROFF THEORY
Correlation analysis of the Taurus molecular cloud complex N86-19272
KRYPTON
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
Lattice dynamics of rare gas multilayers on the Ag(111) surface. Theory and experiment
[AD-A159718] N86-19227
Determination of the surface phonon dispersion relations for monolayer, bilayer, trilayer and thick Kr(111) films physisorbed on Ag(111) by inelastic He scattering
[AD-A159761] N86-19229

L

LAGEOS (SATELLITE)
Metric calibration of the Millstone Hill l-band radar
[AD-A160362] N86-18593
LAGRANGE MULTIPLIERS
Effects of curvature and dilution on unsteady, premixed, laminar flame propagation
[AD-A159934] N86-18481
Effective Lagrangian for the linear sigma model at m/sub sigma/ (YIELDS) infinity
[DE86-001328] N86-19086
LAKES
The ERS-1 observations of lakes for climate research
N86-18385
LAMINAR FLOW
Vortex shedding from solid rocket motor propellant inhibitors N86-18569
One-dimensional model for mud flows
[AD-A159921] N86-18669
LAMINATES
Construction of non-linear model for binary metal-matrix composites
[AD-A159721] N86-18450
Deformation and variable loading of metal-polymer two-layer plates N86-18518
Estimation of r.m.s. strain in laminated skin panels subject to random acoustic loading
[ESDU-84008-A] N86-18745
Layered magnetic superlattices
[DE85-018368] N86-19236
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237

LAND USE
Analysis of the Metric Camera MC-BW for land use classification and land use hazard management (thematic mapping of Metric Camera Spacelab black and white photographs) N86-18363
LANDSAT SATELLITES
Snow mapping from LANDSAT imagery N86-18381
Long linear features observed on the Alpine orogen and their comparison with some geophysical data --- landsat satellites N86-18382
LANTHANUM
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
LARGE SCALE INTEGRATION
UW/NW (University of Washington/Northwest) VLSI Consortium
[AD-A160292] N86-18997
LARGE SPACE STRUCTURES
An analytical investigation of a conceptual design for the station transverse boom rotary joint structure
[NASA-TM-87665] N86-18347
LASER ANNEALING
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618
LASER APPLICATIONS
Aviaremont's efforts to introduce laser technology N86-18286
Laser physics and laser techniques
[AD-A160143] N86-18714
Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940
LASER DAMAGE
Laser damage to spherical targets
[AD-A159717] N86-18710
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713
LASER DOPPLER VELOCIMETERS
Laser Doppler wind profile measurements above sea level --- North Sea
[DFVLR-FB-85-48] N86-18934
LASER INDUCED FLUORESCENCE
Laser induced fluorescence of trapped molecular ions
[DE85-016896] N86-18726
LASER INTERFEROMETRY
Laser interferometer measurements of refractive index in shock-compressed materials
[DE85-015505] N86-18678
LASER OUTPUTS
Studies of compound states of negative ions using laser beams
[AD-A160483] N86-18719
Diagnostic apparatus and method for use in the alignment of one or more laser means onto a fiber optics interface
[DE85-017756] N86-18725
Design and testing of hardware improvements of an acoustic sounder
[AD-A159672] N86-19126
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149
LASER PLASMA INTERACTIONS
Laser damage to spherical targets
[AD-A159717] N86-18710
LASER PLASMAS
RLE (Research Laboratory of Electronics) progress report number 127
[AD-A160477] N86-18621
Laser damage to spherical targets
[AD-A159717] N86-18710
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
LASER PUMPING
Transverse flow CW atomic iodine laser system
[AD-D011933] N86-18708
Laser pumped frequency standards
[AD-A160606] N86-18720
LASER SPECTROSCOPY
An optical multisensor combining mid IR laser scanner, and near IR multispectral scanner (LIMES) N86-18369
Spectroscopic diagnostics to support advanced microelectronic fabrication techniques
[AD-A160192] N86-18717
Studies of compound states of negative ions using laser beams
[AD-A160483] N86-18719
LASER TARGETS
Laser damage to spherical targets
[AD-A159717] N86-18710
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
LASERS
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
LATE STARS
Radial velocity measurements of late-spectral-type stars --- HIPPARCOS N86-18425
LATTICE PARAMETERS
Adaptive decentralized control
[AD-A160187] N86-19058
LATTICE VIBRATIONS
Lattice dynamics of rare gas multilayers on the Ag(111) surface. Theory and experiment
[AD-A159718] N86-19227
Geometric structure and surface vibrational resonances: The BCC fe(3) surface.
[AD-A159916] N86-19231
LAUNCHING
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB
[AD-A160561] N86-18339
LAUNCHING SITES
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB
[AD-A160561] N86-18339
LEAKAGE
Characterization of acoustic emission signals generated by water flow through intergranular stress corrosion cracks
[TI85-014970] N86-19140
LEARNING MACHINES
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246
LEAST SQUARES METHOD
Parametric determination of lift interference for three-dimensional models in the Emmen (Switzerland) aircraft works wind tunnel
[F+W-FO-1740] N86-18304
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
The limiting distribution of least squares in an errors-in-variables linear regression model
[AD-A160190] N86-19105
LEGUMINOUS PLANTS
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
LENSES
Problem Solving Workshop 2: Selecting Objective Lenses
[DE85-014471] N86-19197
LEUKOCYTES
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] N86-18968
LEVELING
The science of and advanced technology for cost-effective manufacture of high precision engineering products. Volume 2: Mechanics of two axes passive precision level monitor for machine tools
[AD-A160140] N86-18731
Mechanics of a two axes passive precision level monitor for machine tools: Volume 2
[AD-A160151] N86-18732
LIBRARIES
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
LIBYAN DESERT
Evaporation in deserts: Physical aspects and remote sensing techniques N86-18367
LIFE CYCLE COSTS
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737
LIFE SCIENCES
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] N86-18949
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379] N86-18950
LIFE SUPPORT SYSTEMS
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] N86-18989
LIFT
Parametric determination of lift interference for three-dimensional models in the Emmen (Switzerland) aircraft works wind tunnel
[F+W-FO-1740] N86-18304
Lift interference corrections for three-dimensional tunnels with porous walls
[F+W-FO-1742] N86-18305
LIFT DEVICES
Compressible, unsteady lifting-surface theory for a helicopter rotor in forward flight
[NASA-TP-2503] N86-18289
LIFTING ROTORS
Compressible, unsteady lifting-surface theory for a helicopter rotor in forward flight
[NASA-TP-2503] N86-18289
LIGANDS
Polymer-based catalysts
[DE85-007904] N86-18567
Chemical applications of topology and group theory. 19: The even permutations of the ligands in five-coordinate complexes viewed as proper rotations of the regular icosahedron
[AD-A160747] N86-19153
LIGHT (VISIBLE RADIATION)
Study of optical sound generation and amplification
[AD-A160758] N86-19196
Evaluation techniques for X-ray mirrors and systems using visible light
[DE86-001206] N86-19199
The Cygnus loop supernova remnant: New observations and a framework for understanding its structure and evolution N86-19273
LIGHT AMPLIFIERS
Nonlinear analysis of Ubitron/Free-Electron laser amplifiers in three-dimensions
[AD-A160631] N86-18722
LIGHT CURVE
Specific problems related to variability --- stellar luminosity; HIPPARCOS N86-18408
LIGHT SCATTERING
Analytic reduction of the monostatic lidar multiple backscattering integral
[AD-A160624] N86-18721
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
Layered magnetic superlattices
[DE85-018368] N86-19236
LIGHT SOURCES
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171
LIGHT TRANSMISSION
Theoretical studies and data analysis of wave propagation in random media
[AD-A160150] N86-18591
Design and testing of hardware improvements of an acoustic sounder
[AD-A159672] N86-19126
A two-flow model to simulte the interaction of irradiance with a submerged plant canopy N86-19188
LIGHT WATER REACTORS
Characterization of acoustic emission signals generated by water flow through intergranular stress corrosion cracks
[TI85-014970] N86-19140
LIGHTHILL METHOD
On the functions e to the power sigma (theta) and tau (theta) and the velocity distribution around Lighthill profiles
[VTH-M-520] N86-18300
LIGHTNING
Atmospheric electricity hazards threat environment definition
[AD-A159739] N86-18909
LIKELIHOOD RATIO
On the optimality of data processors for signal detection over a class of contaminated noises
[AD-A160213] N86-18617
LIMESTONE
Nonlinear wave propagation study
[AD-A160179] N86-18879
LINE OF SIGHT COMMUNICATION
Atmospheric multipath propagation over a long terrestrial line-of-sight path
[AD-A160392] N86-18594
LINEAR ACCELERATORS
Investigation of Re-X glass ceramic for acceleration insulating columns
[DE86-000598] N86-18639

A superconducting heavy ion injector linac
[DE85-013897] N86-19156

LINEAR ARRAYS
Different problems of space stereoscopic observation
N86-18378

LINEAR EQUATIONS
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Conflict sensitivity of algorithms. Part 1: A CRAY X-MP study
[AD-A160206] N86-19023
Memory conflict simulation of a many-processor CRAY architecture. Part 1: A CRAY X-MP study
[AD-A160205] N86-19049
Hermitian and nonnegativity preserving subspaces
[AD-A160294] N86-19081
Limiting properties of large systems of random linear equations
[AD-A160593] N86-19084

LINEAR PROGRAMMING
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341

LINEAR SYSTEMS
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Parallel direct methods for solving banded linear systems
[AD-A160148] N86-18995
On the solution of circulant linear systems
[AD-A159841] N86-19067
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160185] N86-19120
Optical interarray processing
[AD-A160256] N86-19192

LINKAGES
The science of and advanced technology for cost-effective manufacture of high precision engineering products. Volume 2: Mechanics of two axes passive precision level monitor for machine tools
[AD-A160140] N86-18731

LIQUID CHROMATOGRAPHY
Automated ion chromatography
[AD-A159764] N86-18460

LIQUID HELIUM
The 3He nuclear gyroscope
[AD-A159924] N86-18690

LIQUID PHASES
Deformation of Al-Cu powder bodies during liquid-phase sintering N86-18538
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570

LIQUID SURFACES
The effect of surface conditions on the Mach reflection phenomenon
[AD-A160535] N86-18675

LIQUIDS
Binary liquid gels
[DE85-014953] N86-18473

LITHIUM COMPOUNDS
Conductivity, DSC, FTIR, and NMR studies of Poly(vinyl acetate) complexed with alkali metal salts
[AD-A160450] N86-18467
Polymer electrolyte based on poly(ethylene imine) and lithium salts
[AD-A160381] N86-18779

LITHIUM FLUORIDES
Laser interferometer measurements of refractive index in shock-compressed materials
[DE85-015505] N86-18678

LITHIUM SULFUR BATTERIES
Ag/AgCl reference electrode in thionyl chloride electrolytes
[DE85-016221] N86-18633

LOAD DISTRIBUTION (FORCES)
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

LOAD TESTS
Properties of carbon-glass plastic material under pure flexure N86-18519
Development of fatigue and crack propagation design and analysis methodology in a corrosive environment for typical mechanically-fastened joints. Volume 3: Phase 2 documentation
[AD-A160378] N86-18755

LOADS (FORCES)
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
A study of metal adhesion
[CE-TRANS-8026] N86-18480
Cracking resistance of polycarbonate and polymethylmethacrylate at high loading rates
N86-18528
Nonlinear wave propagation study
[AD-A160179] N86-18879

LOCI
An investigation into effects of environmental changes on locus of control
[AD-A160861] N86-18987

LOGIC CIRCUITS
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
Research on computer architecture and logic design
[AD-A160598] N86-19000
On the integration of logic programming and functional programming
[AD-A159751] N86-19013

LOGIC DESIGN
Research on computer architecture and logic design
[AD-A160598] N86-19000

LOSSES
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613

LOW FREQUENCIES
Study of optical sound generation and amplification
[AD-A160758] N86-19196

LOW GRAVITY MANUFACTURING
On the mechanism of precipitation of pores in melts and production of metallic foam under reduced gravity
N86-18837

LOW LEVEL TURBULENCE
Low-level wind systems in the Warsaw Pact countries
[AD-A160144] N86-18916

LOW PRESSURE
Open-cycle vapor compression heat pump
[PB85-222529] N86-18684

LOW SPEED WIND TUNNELS
The minituft surface flow visualisation method: Experience of use in the RAE 5m pressurised low-speed wind tunnel
[AD-A160715] N86-18332
Description of the low speed wind tunnel laboratory computer
[VTH-M-489] N86-19054

LOW TEMPERATURE
Development of high effectiveness droplet heat exchangers
[DE85-013352] N86-18677
Open-cycle vapor compression heat pump
[PB85-222529] N86-18684
Report of the Workshop on Low-Temperature Neutron Irradiation
[DE85-018118] N86-19180

LOW TEMPERATURE ENVIRONMENTS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970

LUBRICATING OILS
Surface creep of mineral oil on inner ring of momentum wheel bearing
[AD-A160746] N86-18735

LUBRICATION
Assessment of government tribology programs
[DE86-001121] N86-18739

LUMINESCENCE
Luminescence from metals and insulators
[DE86-001339] N86-19200

LUMINOUS INTENSITY
Compact configurations within small evolving groups of galaxies N86-19271

LUNAR EXPLORATION
Planetary image conversion task
[NASA-CR-176534] N86-19267

LUNAR PHOTOGRAPHY
Planetary image conversion task
[NASA-CR-176534] N86-19267

LUNGS
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976

LYMPHOCYTES
Molecular approaches to selective immunization
[AD-A160141] N86-18954

M

MACH NUMBER
Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329

MACH REFLECTION
The effect of surface conditions on the Mach reflection phenomenon
[AD-A160535] N86-18675

MACHINE TOOLS
Examples of the application of titanium nitride coatings on 6-5-2 steel tools for cutting steels with controlled inclusions
[BLL-RISLEY-TR-5221-(9091.9F)] N86-18487
Contribution to the study of titanium nitride and carbide coatings obtained by Physical Vapour Deposition (PVD) on 6-5-2 steel tools
[BLL-RISLEY-TR-5220-(9091.9F)] N86-18488
Irreplaceable metal N86-18530
The science of and advanced technology for cost-effective manufacture of high precision engineering products. Volume 2: Mechanics of two axes passive precision level monitor for machine tools
[AD-A160140] N86-18731
Mechanics of a two axes passive precision level monitor for machine tools: Volume 2
[AD-A160151] N86-18732

MACHINING
Irreplaceable metal N86-18530

MAGELLANIC CLOUDS
Stars in the direction of the Magellanic Clouds — HIPPARCOS N86-18410

MAGMA
Preliminary considerations for extraction of thermal effect from magma
[DE85-009341] N86-18781

MAGNESIUM COMPOUNDS
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141

MAGNETIC COILS
Metallic induction reaction engine
[AD-A160137] N86-18439

MAGNETIC DIPOLES
Superconducting materials for the SSC
[DE86-000618] N86-19224

MAGNETIC DISPERSION
Dispersion surfaces — plasma waves
[KGI-PREPRINT-067] N86-19207

MAGNETIC FIELD CONFIGURATIONS
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
Poloidal rotation of reversed field pinch plasma
[IPPJ-749] N86-19202

MAGNETIC FIELDS
Investigation of rapidly quenched rare Earth iron alloys for permanent magnets
[AD-A159946] N86-18494
The 3He nuclear gyroscope
[AD-A159924] N86-18690
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] N86-18955
Fundamental processes in partially ionized plasmas
[AD-A160011] N86-19212
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217
Layered magnetic superlattices
[DE85-018368] N86-19236

MAGNETIC INDUCTION
Metallic induction reaction engine
[AD-A160137] N86-18439
Influence of elastic-stress state created by coatings on the magnetic properties of the alloy Fe-3 percent Si
N86-18532
Investigation of Re-X glass ceramic for acceleration insulating columns
[DE86-000598] N86-18639

MAGNETIC MATERIALS
Lawrence Berkeley Laboratory magnetic-moment sorting system
[DE86-000610] N86-19185
Superconducting materials for the SSC
[DE86-000618] N86-19224

MAGNETIC MEASUREMENT
Magnetic measurements on the ring dipoles and quadrupoles for the Los Alamos proton storage ring
[DE86-000785] N86-19175

MAGNETIC MOMENTS
Lawrence Berkeley Laboratory magnetic-moment sorting system
[DE86-000610] N86-19185

MAGNETIC PROPERTIES
Influence of elastic-stress state created by coatings on the magnetic properties of the alloy Fe-3 percent Si
N86-18532
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182

MAGNETIC PUMPING
Research on plasma physics
[AD-A160425] N86-19213

MAGNETIC STORMS
Forecasting solar flares and geomagnetic storms at Meudon (France)
N86-18870

MAGNETOHYDRODYNAMIC STABILITY
Plasma instabilities in the auroral E-region
N86-18825
Magnetohydrodynamic stability of spheromak plasma in spheroidal flux conserver: Application of Mercier criterion
[IPPJ-747] N86-19205
Torsatron equilibrium and stability studies
[DE85-018088] N86-19216

MAGNETOHYDRODYNAMICS
Hamiltonian structures underlying MHD equilibria
[DE86-001236] N86-19218

MAGNETOPAUSE
Plasma variations at the dayside magnetopause
N86-18858

MAGNETOSONIC RESONANCE
Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak
[IPPJ-746] N86-19204

MAGNETOSPHERE
Active Magnetospheric Particle Tracer Explorers (AMPTE) Ion Release Module (IRM): Flight experience after 7 year mission
[MPI-IN-45] N86-18438
Energization of electrons following ion release in the solar wind N86-18843

MAGNETOSPHERIC ION DENSITY
Electrostatic ion waves generated by ion loss-cone distributions in the magnetosphere
[KGI-PREPRINT-082] N86-19210

MAGNETS
Investigation of rapidly quenched rare Earth iron alloys for permanent magnets
[AD-A159946] N86-18494
Multi-function ring magnet power supply for rapid-cycling synchrotrons
[DE85-018395] N86-19221

MAGNONS
Layered magnetic superlattices
[DE85-018368] N86-19236

MAINE
Water resources data for Maine, water year 1984
[PB85-240265] N86-18771

MAINTAINABILITY
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737
Statistical aspects of reliability, maintainability and availability
[AD-A160126] N86-19102

MAINTENANCE
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060

MAN MACHINE SYSTEMS
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] N86-18983
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060

MANAGEMENT INFORMATION SYSTEMS
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
Establishing a successful management information system for project management
[DE85-018543] N86-19251

MANAGEMENT METHODS
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060
Managing environmental projects with the aid of computers. Revision 1
[DE85-018290] N86-19250

MANAGEMENT SYSTEMS
Managing environmental projects with the aid of computers. Revision 1
[DE85-018290] N86-19250

MANEUVERABILITY
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

MANEUVERS
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

MANGANESE ALLOYS
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182

MANNED SPACE FLIGHT
First German Spacelab missions, no. 6 N86-18979

MANUALS
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
DOE explosive safety manual, revision 2
[DE86-001154] N86-18574
ANL user's guide to accessing the energy research Cray X-MP computer
[DE85-018558] N86-19042
Defense technical information center cataloging guidelines
[AD-A160100] N86-19255

MANUFACTURING
Irreplaceable metal N86-18530
Procedure for manufacturing poly (acetylene) foils
[DE86-001259] N86-18566
Magnet cable manufacturing
[DE86-000607] N86-18640
The science of and advanced technology for cost-effective manufacture of high precision engineering products. Volume 2: Mechanics of two axes passive precision level monitor for machine tools
[AD-A160140] N86-18731
Silver/glass mirrors for solar thermal systems
[DE85-000537] N86-18785
Amorphous silicon conceptual module design and cost estimate
[DE85-012177] N86-18787

MAPPING
A robust layered control system for a mobile robot
[AD-A160833] N86-18736

MAPS
Toward a surface sketch
[AD-A159693] N86-18767
OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program interim report: The Airborne Ocean Thermal Structure Mapping Project
[AD-A160283] N86-18943

MARAGING STEELS
Testing of steel 03Kh11N10M2T1-VD for springs of inertia safety belts
[BLL-M-36464-(5828.4)] N86-18482

MARINE BIOLOGY
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
A two-flow model to simulte the interaction of irradiance with a submerged plant canopy N86-19188

MARINE ENVIRONMENTS
Remote sensing of oil on sea: Lidar and passive IR experiments N86-18370
Evaluation of the ocean technology system's MK 1-S wireless surface unit, MK 1 DCI two diver air radio, MK 1-D-A wireless diver unit, MK 1-D-H hardwire diver unit and MK 1-D/S unit
[AD-A160480] N86-18595
Microbial degradataion of oil in the marine environment
[FOA-C-40219-B4] N86-18807
Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940

MARKING
Dispersion experiments using short-term releases of an atmospheric tracer
[DE85-018519] N86-18803

MARKOV CHAINS
A Markov chain approach to periodic queues
[CTH-MATH-1985-10] N86-19089

MARKOV PROCESSES
An extension of Spitzer's integral representation theorem with an application
[AD-A160184] N86-19072
Structural properties of randomized times
[AD-A160214] N86-19077
The SURE Reliability Analysis Program
[NASA-TM-87593] N86-19096
A methodology for computation reduction for specially structured large scale Markov decision problems
[AD-A159950] N86-19100
Statistical aspects of reliability, maintainability and availability
[AD-A160126] N86-19102
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19108
An aggregation technique for the transient analysis of stiff Markov systems
[AD-A160286] N86-19112
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160185] N86-19120

MARTINGALES
Construction of exponential Martingales for counting processes
[AD-A160189] N86-19104

MASS DISTRIBUTION
Graphite fiber intercalation: Basic properties of copper chloride intercalated fibers
[NASA-TM-87217] N86-18442
Compact configurations within small evolving groups of galaxies N86-19271

MASS SPECTROMETERS
Turbulent parameters of the lower thermosphere as determined by mass spectrometer during the MAP/WINE campaign — polar regions N86-18851

MASS SPECTROSCOPY
New method for estimating isotopic ratios from pulse-counting mass spectrometric data
[DE86-000095] N86-19044

MASS TRANSFER
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646
CSDP: The seismology of continental thermal regimes
[DE86-000214] N86-18887

MATCHED FILTERS
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696

MATCHING
Matched asymptotic expansions to similarity solutions of shock diffraction
[NASA-CR-178022] N86-18649

MATERIALS HANDLING
Fatigue behaviour of AISI 304 L stainless steel elements, butt welded by the electron beam process
[BLL-RISLEY-TR-5234-(9091.9F)] N86-18743

MATERIALS RECOVERY
The benefits of recycling silver: A precious metal
[AD-A160895] N86-18501

MATHEMATICAL LOGIC
A survey of properties of relations which have the confluence property
[AD-A159673] N86-19012

MATHEMATICAL MODELS
Catalytic combustion of gas turbines: Process modelling and kinetic study of iso-octane oxidation N86-18326
Development and application of dynamic simulations of a subsonic wind tunnel
[NASA-TM-87211] N86-18338
Effects of curvature and dilution on unsteady, premixed, laminar flame propagation
[AD-A159934] N86-18461
Effects of arsenic doping on the solidification dynamics of pulsed laser melted silicon
[DE85-006107] N86-18564
Numerical modeling study of gain and downward radiation for selected FM and VHF-TV broadcast antenna systems
[PB85-239046] N86-18606
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Study of journal bearing dynamics using 3-dimensional motion picture graphics
[NASA-TM-87205] N86-18647
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667

Adaptive gridding in two dimensions for optimal accuracy and efficiency
[AD-A159943] N86-18670
Transport theory and fluid dynamics
[DE85-018042] N86-18681
Particle-in-cell simulations of the lasertron
[DE85-012698] N86-18723
Mechanics of a two axes passive precision level monitor for machine tools: Volume 2
[AD-A160151] N86-18732
Study of large aerosol particles
[AD-A160379] N86-18880
A statistical gravity model for northern Texas
[AD-A160474] N86-18883
Reports from the German Meteorological Service. Number 168: A one-dimensional numerical model for the prediction of fog
[ISBN-3-88148-217-2] N86-18889
Microburst wind shear models from the Joint Airport Weather Studies (JAWS)
[AD-A159758] N86-18910
Calculation of ice accretion on cylindrical rods according to Bain's model, and comparison with experimental results — stratus clouds
[DFVLR-FB-85-46] N86-18933
Active and passive remote sensing of ice
[AD-A160075] N86-18939
Moving average models with bivariate exponential and geometric distributions
[AD-A160178] N86-19071
Vectorization of diffusion computations in the presence of periodic boundary conditions
[DE85-017631] N86-19087
Principal component analysis under correlated multivariate regression equations model
[AD-A160266] N86-19109
Covariate measurement error in logistic regression
[AD-A160277] N86-19111
Maximum entropy pole-zero estimation
[AD-A160655] N86-19116
High velocity gas jet noise control N86-19123
Sound transmission into shells doubly excited by incident waves and by arbitrary surface forcing functions
[AD-A159936] N86-19131
Simulations of fusion plasmas by A 3-D, E-M particle code
[DE85-008642] N86-19214

MATHEMATICAL PROGRAMMING
A cascaded coding scheme for error control
[NASA-CR-176513] N86-19062

MATHEMATICS
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050

MATRICES (MATHEMATICS)
Lanczos algorithm applied to modal analysis of very large structures
[AD-A160210] N86-18733
On the solution of circulant linear systems
[AD-A159841] N86-19067
Limiting behavior of the norm of products of random matrices and two problems of Geman-Hwang
[AD-A160209] N86-19076
Hermitian and nonnegativity preserving subspaces
[AD-A160294] N86-19081
A note on asymptotic joint distribution of the Eigenvalues of a noncentral multivariate F matrix
[AD-A160422] N86-19082
Limiting properties of large systems of random linear equations
[AD-A160593] N86-19084
Vectorization of diffusion computations in the presence of periodic boundary conditions
[DE85-017631] N86-19087
Principal component analysis under correlated multivariate regression equations model
[AD-A160266] N86-19109
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117

MATRIX METHODS
Dynamic analysis of systems having large damping variations
[TI85-012190] N86-18757

MAXIMUM ENTROPY METHOD
Maximum entropy pole-zero estimation
[AD-A160655] N86-19116

MAXIMUM LIKELIHOOD ESTIMATES
The limiting distribution of least squares in an errors-in-variables linear regression model
[AD-A160190] N86-19105

MAXWELL FLUIDS
Mesh refinement analysis of the flow of a Maxwell fluid through an abrupt contraction
[DE85-012230] N86-18665

MAXWELL-BOLTZMANN DENSITY FUNCTION
Nonisotropic temperature distributions in the auroral F-region as measured with EISCAT N86-18829

MEAN
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080
Clear-air transmission in the 8 to 12-micrometer band at selected stations
[AD-A160625] N86-19195

MEASURE AND INTEGRATION
Weak limits of probability measures on metric Schauder spaces
[CTH-MATH-1985-17] N86-19119

MEASURING INSTRUMENTS
Mechanics of a two axes passive precision level monitor for machine tools: Volume 2
[AD-A160151] N86-18732

MECHANICAL DEVICES
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941

MECHANICAL PROPERTIES
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
Tasks of accelerating scientific and technical progress in metal science of high-grade steels
[BLL-M-36465-(5828.4)] N86-18481
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Comparative creep analysis of unidirectionally oriented composite materials with various kinds of reinforced fibers N86-18520
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548
Chemical modification of poly(ethylene imine) for polymeric electrolyte
[AD-A160482] N86-18554
Deuterated polymers: Chemical and physical properties and future prospects
[AD-A160762] N86-18562
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Structural properties of randomized times
[AD-A160214] N86-19077

MELTING
Effects of arsenic doping on the solidification dynamics of pulsed laser melted silicon
[DE85-006107] N86-18564

MELTING POINTS
Method for making alloy additions to base metals having higher melting points
[AD-D011928] N86-18489
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570

MELTS (CRYSTAL GROWTH)
On the mechanism of precipitation of pores in melts and production of metallic foam under reduced gravity N86-18837

MEMORY
Beyond associations: Strategic components in memory retrieval
[AD-A160783] N86-18985

MENTAL PERFORMANCE
Routines
[AD-A160481] N86-19032
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060

MERCURY CADMIUM TELLURIDES
Electron irradiation of p-type mercury cadmium telluride
[AD-A159737] N86-18612

MERCURY LAMPS
Ultraviolet disinfection of water for small water supplies
[PB85-239960] N86-18579

MESH
Mesh refinement analysis of the flow of a Maxwell fluid through an abrupt contraction
[DE85-012230] N86-18665
A two-dimensional mesh moving technique for time dependent partial differential equations
[AD-A160204] N86-19073

MESOPAUSE
The Cold Arctic Mesopause Project (CAMP) campaign 1982 N86-18830
Super Cold Arctic Mesopause Project (CAMP): A research project to investigate the polar middle atmosphere in summer with rocket launches from 65 deg-80 deg N N86-18831

MESOSCALE PHENOMENA
Development and validation of a vertically two-dimensional mesoscale numerical model
[AD-A160741] N86-18927
Weather Research Program
[PB85-246940] N86-18936

MESOSPHERE
Wind corners and wind strata in the mesosphere — polar regions N86-18921
Ground-based microwave observations of mesospheric ozone: Intercomparison with measurements obtained by other techniques N86-18948
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign — polar regions N86-18958

MESSAGE PROCESSING
Reduction of the effects of the communication delays in scientific algorithms on message passing MIMD architectures
[NASA-CR-178044] N86-19010
Guidelines for a minimal Ada Runtime Environment
[AD-A160451] N86-19030
Automatic processing of Navy message narrative
[AD-A159670] N86-19056

METABOLISM
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] N86-18951
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] N86-18978

METAL COATINGS
The application of chromium carbide to the surface of iron and steels
[BLL-M-36489-(5828.4)] N86-18477

METAL CUTTING
Deburring of metal workpieces with directed high pressure water jets. Basis and application limits
[KFK-PFT-107] N86-18741

METAL FATIGUE
USSR Report: Materials Science and Metallurgy N86-18516
Contact fatigue upon low-cycle loading of WC-Co hard alloys designed for pressure working of metals N86-18517

METAL FILMS
Characterization of multilayer Cu films on Ru(0001)
[DE86-000861] N86-18508

METAL FOAMS
On the mechanism of precipitation of pores in melts and production of metallic foam under reduced gravity N86-18837

METAL FOILS
Procedure for manufacturing poly (acetylene) foils
[DE86-001259] N86-18566

METAL MATRIX COMPOSITES
Construction of non-linear model for binary metal-matrix composites
[AD-A159721] N86-18450

METAL PLATES
Deformation and variable loading of metal-polymer two-layer plates N86-18518

METAL POWDER
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18490
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797

METAL SHELLS
Sound transmission into shells doubly excited by incident waves and by arbitrary surface forcing functions
[AD-A159936] N86-19131

METAL SURFACES
Geometric structure and surface vibrational resonances: The BCC fe(3) surface
[AD-A159916] N86-19231

METAL-METAL BONDING
A study of metal adhesion
[CE-TRANS-8026] N86-18480

METALLOGRAPHY
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
METALLOIDS
Method for making alloy additions to base metals having higher melting points
[AD-D011928] N86-18489
METALLURGY
Irreplaceable metal N86-18530
METALS
A device for testing metal hardness at high temperatures N86-18511
Photon emission in deformation and failure of metals N86-18527
Thermoelastic-plastic flow in solids
[DE86-001230] N86-18761
Defects and materials characterization by analysis of ultrasonic signals. Study of a technique to measure ultrasonic attenuation
[AD-A159927] N86-19129
Luminescence from metals and insulators
[DE86-001339] N86-19200
Thermal plasma chemical synthesis of powders
[DE86-000793] N86-19225
METASTABLE STATE
Radiative lifetimes and kinetic studies of metastable * NO(+)(a 3 sigma(+)) and O2(+)(a 4 pi sub u)
[AD-A159759] N86-19122
METEOROLOGICAL CHARTS
Central American climatology
[AD-A159989] N86-18915
The European LFM-style forecast aids
[AD-A160166] N86-18918
METEOROLOGICAL INSTRUMENTS
Evaluation of irreversible humidity indicator
[AD-A159840] N86-19689
METEOROLOGICAL PARAMETERS
The role of metallurgical variables in controlling hydrogen embrittlement
[AD-A160446] N86-18496
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Soesterberg, Netherlands. Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Muir AAF, Harrisburg, Pennsylvania
[AD-A159731] N86-18907
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Kl Sawyer AFB, Michigan
[AD-A159732] N86-18908
Catalog of air weather service technical documents
[AD-A159881] N86-18912
Central American climatology
[AD-A159989] N86-18915
Frontal passage data from the SOUSY-VHF-radar
[AD-A160211] N86-18919
Aviation weather forecasts based on advection: Experiments using modified initial conditions and improved analyses
[AD-A160369] N86-18920
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941
Users guide for normal mode objective analysis of global data assimilation
[AD-A160373] N86-18998
METEOROLOGICAL RADAR
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
METEOROLOGICAL SATELLITES
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
Navy tactical applications guide. Volume 5, part 2: Indian Ocean (Arabian Sea/Bay of Bengal) weather analysis and forecast applications
[AD-A160781] N86-18928
METEOROLOGICAL SERVICES
Use of satellite images in the design of a standard meteorological station network N86-18356
METEOROLOGY
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Hickam AFB, Hawaii
[AD-A159730] N86-18906
U.S. Navy climatic study of the Caribbean Sea and Gulf of Mexico. Volume 1: West Caribbean Sea and Central American waters
[AD-A160159] N86-18917
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
A comparison of moisture variables in the vertical interpolations of a 4-D assimilation system
[AD-A160464] N86-18925
METEOSAT SATELLITE
Application of METEOSAT data for remote sensing of Earth resources: EARSeL Working Group 7 report --- agrometeorology in drought areas N86-18357
METHANE
Analysis for impurities in helium using the helium ionization detector, report of investigations 1985
[PB85-245157] N86-18476
IPNS grooved, solid methane moderator
[DE85-018401] N86-19222
METHYL CHLORIDE
Vapor pressure of methylphosphonic dichloride: A compendium
[AD-A160513] N86-18447
METHYLENE
Preparation of P-N-H and p-p compounds from a silylated amino(methylene) phosphine
[AD-A159829] N86-18443
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800
METRIC PHOTOGRAPHY
Outstanding results from one year's activities of the ESA Metric Camera Working Group N86-18359
Aerotriangulation with Spacelab Metric Camera images N86-18360
Line map production with Metric Camera data N86-18361
Use of Metric Camera for landscape units: Description and mapping N86-18362
Analysis of the Metric Camera MC-BW for land use classification and land use hazard management (thematic mapping of Metric Camera Spacelab black and white photographs) N86-18363
MICE
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] N86-18959
MICROCOMPUTERS
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
Development and implementation of an MC68000/VME microcomputer for payload support systems N86-18864
Two generations of microcomputer-based program units for sounding rocket attitude control systems N86-18865
Catalog of air weather service technical documents
[AD-A159881] N86-18912
Final evaluation of the light pen as the key component in a microcomputer-based simulator
[AD-A160461] N86-18999
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
A survey of public domain software for microcomputers
[AD-A160603] N86-19034
Tevatron extraction microcomputer
[DE85-016985] N86-19170
Design, construction and initial application of a low-light-level imaging detector N86-19189
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246
MICROELECTRONICS
CRRES/SPACERAD (combined release and radiation effects satellite/space radiation effects program) experiment descriptions
[AD-A160504] N86-18350
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18897
Spectroscopic diagnostics to support advanced microelectronic fabrication techniques
[AD-A160192] N86-18717
MICROORGANISMS
Microbial degradataion of oil in the marine environment
[FOA-C-40219-B4] N86-18807
MICROPHONES
Report of noise measurements with 2 different microphone dispositions on airplane type Cessna F 172L
[VTH-M-510] N86-19143
MICROPOROSITY
Rapidly solidified microstructures in eutectic alloys
[DE85-018187] N86-18504
MICROPROCESSORS
Real time: Automatic vehicle potential determination from ESA measurements. Part 1. The count ratio algorithm
[AD-A160459] N86-18435
Low-cost microprocessor controlled shadowband radiometer
[DE85-016614] N86-18702
Development and implementation of an MC68000/VME microcomputer for payload support systems N86-18864
Reliability evaluation of fault-tolerant multiprocessor systems
[AD-A160234] N86-18996
UW/NW (University of Washington/Northwest) VLSI Consortium
[AD-A160292] N86-18997
Operation Manual CORRTEX 3 Recorder
[DE85-014872] N86-19004
Microprocessor local computer network evaluation
[AD-A159914] N86-19048
MICROPROGRAMMING
Performance evaluation of the JRS automatic microcode generating system
[AD-A159671] N86-19011
MICROSCOPY
Association/dissociation processes in dense gases
[AD-A160236] N86-19148
MICROSTRUCTURE
Construction of non-linear model for binary metal-matrix composites
[AD-A159721] N86-18450
Structural changes in ferrite-austenite steel O3Kh26N6 during hot torsion
[BLL M-36451-(5828.4F)] N86-18484
Method for refining microstructures of blended elemental powder metallurgy titanium articles
[AD-D011936] N86-18490
Method for refining microstructures of prealloyed powder metallurgy titanium articles
[AD-D011944] N86-18491
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Microstructure and properties of selected high strength ferritic weld metals
[DE85-015107] N86-18502
Rapidly solidified microstructures in eutectic alloys
[DE85-018187] N86-18504
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
Evaluation of ion microscopic spatial resolution and image quality
[AD-A160155] N86-18693
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques, 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239
MICROWAVE ATTENUATION
Symmetric fin-lines --- transmission lines
[FOA-C-30408-E] N86-18643
MICROWAVE CIRCUITS
Computation of the radiation characteristics of a generalized phased array
[NASA-TM-87185] N86-18586

MICROWAVE EQUIPMENT
Development of a system to measure the response time of microwave survey instruments to rotating radar antenna patterns
[PB85-230217] N86-18605
Microwave semiconductor research - materials, devices and circuits
[AD-A160581] N86-18624
New York State Police remote communications site small wind energy conversion system
[TI85-001683] N86-18784
Active and passive remote sensing of ice
[AD-A160075] N86-18939
A semiempirical model for Doppler spectral features of microwave radar sea scatter
[AD-A160576] N86-18946

MICROWAVE FREQUENCIES
Laser pumped frequency standards
[AD-A160606] N86-18720

MICROWAVE RADIOMETERS
Operational remote sensing of oil slicks at sea by microwave radiometry N86-18371

MICROWAVE SCATTERING
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766

MICROWAVE SENSORS
The ERS-1 Active Microwave Instrumentation (AMI) design constraints N86-18353

MICROWAVE SOUNDING
Ground-based microwave observations of mesospheric ozone: Intercomparison with measurements obtained by other techniques N86-18846

MICROWAVE SPECTRA
A semiempirical model for Doppler spectral features of microwave radar sea scatter
[AD-A160576] N86-18946

MICROWAVE TRANSMISSION
Atmospheric multipath propagation over a long terrestrial line-of-sight path
[AD-A160392] N86-18594

MIDDLE ATMOSPHERE
Large-scale structure of the middle atmosphere during the winter 1983/84 N86-18817
The middle atmosphere above Andoya Norway during the winter 1983/84 as derived from metrockets and OH nightglow observations N86-18818
Middle atmosphere turbulence as determined by ion probes --- polar regions N86-18871

MILITARY AIR FACILITIES
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905

MILITARY HELICOPTERS
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

MILITARY OPERATIONS
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982
Automatic processing of Navy message narrative
[AD-A159670] N86-19056
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057

MILITARY TECHNOLOGY
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Automatic processing of Navy message narrative
[AD-A159670] N86-19056

MILKY WAY GALAXY
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344

MILLIMETER WAVES
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
Microwave semiconductor research - materials, devices and circuits
[AD-A160581] N86-18624
Symmetric fin lines --- transmission lines
[FOA-C-30408-E] N86-18643
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797

MINERAL OILS
Surface creep of mineral oil on inner ring of momentum wheel bearing
[AD-A160746] N86-18735

MINERALS
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797

MINICOMPUTERS
The design and implementation of an operating system for the IBM personal computer
[AD-A160875] N86-19052
Optical interarray processing
[AD-A160256] N86-19192

MINING
USSR Report: Materials Science and Metallurgy N86-18510

MIRRORS
Silver/glass mirrors for solar thermal systems
[DE85-000537] N86-18785
Composite mirrors and structures for balloon telescopes N86-18863
Design of the NSLS infrared beam line mirror no. 1
[DE85-018481] N86-19198
Evaluation techniques for X-ray mirrors and systems using visible light
[DE86-001206] N86-19199

MISALIGNMENT
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929

MISSILE CONTROL
Independent research and development: Infrared sensor technology program test plan
[AD-A160061] N86-18691

MISSILE LAUNCHERS
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

MISSILE TESTS
Independent research and development: Infrared sensor technology program test plan
[AD-A160061] N86-18691

MISSION PLANNING
Expected fulfillments of observation proposals versus ESA priority --- HIPPARCOS N86-18400
Optimizing the observing strategy through simulations --- HIPPARCOS N86-18403

MIXING
Molecular transmission band models for the uniformly mixed and the trace gases
[AD-A160442] N86-18466

MIXING LENGTH FLOW THEORY
Calibration and use of five-hole flow direction probes for low speed wind tunnel application
[AD-A160262] N86-18330
Measured similarity properties of eddy viscosity and mixing length in three-dimensional turbulent stern flows
[AD-A156644] N86-18666

MIXTURES
Method for making alloy additions to base metals having higher melting points
[AD-D011928] N86-18489

MODAL RESPONSE
Dynamic analysis of systems having large damping variations
[TI85-012190] N86-18757

MODELS
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571
A resource conflict resolution problem formulated in continuous time
[AD-A159675] N86-18587
Modeling crosstalk on printed circuit boards
[AD-A160657] N86-18626
Representation of topography in spectral models
[AD-A159917] N86-18877
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Why bother with experiments?
[AD-A160634] N86-19248

MODERATORS
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982
IPNS grooved, solid methane moderator
[DE85-018401] N86-19222

MODULARITY
The Modular Optoelectronic Multispectral Scanner (MOMS) missions and geoscientific results N86-18364
Radiometric correction of Modular Optoelectronic Multispectral Scanner (MOMS) CCD images N86-18365
Future Modular Optoelectronic Multispectral Scanner (MOMS) developments: Discussion of improvements and possibilities to be expected for geological applications N86-18366

MODULATION TRANSFER FUNCTION
Comparison of two MTF measurement methods: Sine-wave versus edge gradient analysis
[AD-A160800] N86-18700

MODULES
Telescoping space station modules
[NASA-TM-86253] N86-18340
UW/NW (University of Washington/Northwest) VLSI Consortium
[AD-A160292] N86-18997

MODULUS OF ELASTICITY
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548

MOISTURE
Analysis for impurities in helium using the helium ionization detector, report of investigations 1985
[PB85-245157] N86-18476

MOISTURE CONTENT
Theory for dynamic compaction of wet porous solids
[DE85-017596] N86-18578

MOISTURE RESISTANCE
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449

MOLECULAR BEAMS
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149

MOLECULAR BIOLOGY
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] N86-18968

MOLECULAR CLOUDS
Supermassive star formation: The early phases N86-19270
Correlation analysis of the Taurus molecular cloud complex N86-19272

MOLECULAR EXCITATION
Triply differential studies of atomic and molecular photoionization using synchrotron radiation
[AD-A160587] N86-19150
Intramolecular coupling in metal-free binuclear phthalocyanines
[AD-A160784] N86-19154

MOLECULAR FLOW
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159995] N86-18712

MOLECULAR GASES
Molecular transmission band models for the uniformly mixed and the trace gases
[AD-A160442] N86-18466
Airglow O2(1 Sigma) atmospheric band at 8645 Angstrom and the rotational temperature observed at 23 deg S
[INPE-3631-PRE/811] N86-18809
MOLECULAR IONS
Laser induced fluorescence of trapped molecular ions
[DE85-016898] N86-18726
MOLECULAR SPECTROSCOPY
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149
MOLECULAR STRUCTURE
Chemical applications of topology and group theory. Twenty 8-vertex polyhedra and their rearrangements
[AD-A160589] N86-18489
Fracto-emission from polymers
[AD-A160510] N86-18555
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618
Studies of structure and transport in quasi-one dimensional conductors N86-19226
MOLECULAR WEIGHT
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
MOLTEN SALTS
MNDO calculations of ions in chloroaluminate molten salts
[AD-A160620] N86-18471
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 3
[DE86-001120] N86-18789
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 2
[DE86-001119] N86-18792
MOLYBDENUM
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493
MOLYBDENUM ALLOYS
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493
Welding procedure specification: Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium-molybdenum
[DE86-001517] N86-18765
MOLYBDENUM SULFIDES
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
MOMENTS OF INERTIA
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
MOMENTUM TRANSFER
The energy balance in the solar chromosphere-corona transition zone N86-18833
A stochastic model for particle impingements on orbiting spacecraft
[NASA-TP-2550] N86-19095
MONATOMIC GASES
Transverse flow CW atomic iodine laser system
[AD-D011933] N86-18708
MONITORS
Development of a Room Air Monitor System and Workplace Transuranic Aerosol Measurement System
[DE86-001563] N86-18806
MONOCHROMATORS
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
MONTE CARLO METHOD
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
MOORING
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941
MORPHOLOGY
Treatment of metal powders in attrition machines
[BLL-M-36420-(5282.4F)] N86-18485
MOTION PICTURES
Study of journal bearing dynamics using 3-dimensional motion picture graphics
[NASA-TM-87205] N86-18647
MOTION SICKNESS
The beginnings of airborne weightlessness research
[AD-A160575] N86-18966
MOTOR VEHICLES
USSR report: Transportation
[JPRS-UTR-85-014] N86-18284
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
USSR report: Transportation
[JPRS-UTR-85-015] N86-18323
Stirling powered van program overview
[NASA-TM-87227] N86-19265
MOTORS
Digital phase-locked loop speed control for a brushless dc motor
[AD-A159977] N86-18614
MUD
One-dimensional model for mud flows
[AD-A159921] N86-18669
MULTIPATH TRANSMISSION
Atmospheric multipath propagation over a long terrestrial line-of-sight path
[AD-A160392] N86-18594
MULTIPLE ACCESS
Minimizing the number of clusters in mobile packet radio networks
[AD-A160127] N86-18590
MULTIPLIERS
Investigation of high speed ICs in InP using MIS structures
[AD-A159652] N86-18611
MULTIPROCESSING (COMPUTERS)
Parallel direct methods for solving banded linear systems
[AD-A160148] N86-18995
Reliability evaluation of fault-tolerant multiprocessor systems
[AD-A160234] N86-18996
Research on computer architecture and logic design
[AD-A160598] N86-19000
Reduction of the effects of the communication delays in scientific algorithms on message passing MIMD architectures
[NASA-CR-178044] N86-19010
A performance measurement methodology for software multiple-backend database systems
[AD-A160284] N86-19026
Memory conflict simulation of a many-processor CRAY architecture. Part 1: A CRAY X-MP study
[AD-A160205] N86-19049
Tevatron extraction microcomputer
[DE85-016985] N86-19170
MULTISENSOR APPLICATIONS
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881
MULTISPECTRAL BAND SCANNERS
The Modular Optoelectronic Multispectral Scanner (MOMS) missions and geoscientific results N86-18364
Radiometric correction of Modular Optoelectronic Multispectral Scanner (MOMS) CCD images N86-18365
Future Modular Optoelectronic Multispectral Scanner (MOMS) developments: Discussion of improvements and possibilities to be expected for geological applications N86-18366
MULTISPECTRAL LINEAR ARRAYS
Radiometric correction of Modular Optoelectronic Multispectral Scanner (MOMS) CCD images N86-18365
MULTIVARIATE STATISTICAL ANALYSIS
Poisson-stability as a unifying factor for max-stability and sum-stability
[AD-A160132] N86-19070
A note on asymptotic joint distribution of the Eigenvalues of a noncentral multivariate F matrix
[AD-A160422] N86-19082
Limiting properties of large systems of random linear equations
[AD-A160593] N86-19084
Principal component analysis under correlated multivariate regression equations model
[AD-A160266] N86-19109
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117
MUSCOVITE
Preparation of mica glass-ceramics by crystallization of fluorphlogopite-fluormuscovite glass N86-18577
MUSCULOSKELETAL SYSTEM
Polyphosphazenes with etheric side groups: Prospective biomedical and solid electrolyte polymers
[AD-A160549] N86-18558
MUTAGENS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-19969

N

NACELLES
Calculation of the external nacelle surface for single and double stream jet engines for civil aircraft
[VTH-M-445] N86-18301
NASA PROGRAMS
Space station: ESA views on requirements for experimental and operational Earth observation missions N86-18379
Space research in the era of the space station N86-18872
Stirling powered van program overview
[NASA-TM-87227] N86-19265
Research and technology: 1985 annual report of the Lyndon B. Johnson Space Center
[NASA-TM-58272] N86-19280
NATIONAL PARKS
Remote sensing for environmental management of British National Parks: Review and preview N86-18368
NATURAL LANGUAGE (COMPUTERS)
Automatic processing of Navy message narrative
[AD-A159670] N86-19056
A mechanism for natural language database N86-19252
NAVIER-STOKES EQUATION
PNS (Parabolized Navier-Stokes) computations for spinning and fin-stabilized projectiles at supersonic velocities
[AD-A160393] N86-18337
Marching iterative methods for the parabolized and thin layer Navier-Stokes equations
[NASA-CR-178028] N86-18650
Adapting a Navier-Stokes code to the ICL-DAP
[NASA-CR-178034] N86-18651
Computational fluid dynamics, volume 1 --- conference
[VKI-LS-1985-04-VOL-1] N86-18652
Basic equations of fluid mechanics N86-18653
Introduction to finite elements N86-18654
Finite element calculation of generalized Newtonian flow N86-18655
The time-dependent incompressible Navier-Stokes equations via Finite Element Method (FEM) N86-18658
Computational fluid dynamics, volume 2 --- conference
[VKI-LS-1985-04-VOL-2] N86-18660
Compact finite difference methods for solving incompressible Navier-Stokes equations around oscillating bodies N86-18661
NAVIGATION
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625
NAVIGATORS
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973
NEAR FIELDS
Computation of the radiation characteristics of a generalized phased array
[NASA-TM-87185] N86-18586
NEAR INFRARED RADIATION
Optical properties of the metals Al, Co, Cu, Au, Fe, Pb, Ni, Pd, Pt, Ag, Ti and W in the infrared and far infrared
[AD-A159736] N86-18492
NEGATIVE IONS
Studies of compound states of negative ions using laser beams
[AD-A160483] N86-18719
NEODYMIUM LASERS
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713
NEON
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716

NEURONS
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] N86-18958
NEUTRAL ATOMS
Forces on neutral atoms due to electromagnetic fields
[AD-A160719] N86-19151
NEUTRON BEAMS
Report of the Workshop on Low-Temperature Neutron Irradiation
[DE85-018118] N86-19180
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237
NEUTRON DIFFRACTION
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237
Neutron diffraction methods for the study of residual stress fields
[AERE-R-11630] N86-19240
NEUTRON IRRADIATION
Report of the Workshop on Low-Temperature Neutron Irradiation
[DE85-018118] N86-19180
NEUTRON SCATTERING
Small angle neutron scattering data on cements with pozzolanic additives
[AERE-R-11609] N86-19162
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182
NEUTRON SOURCES
Assessment of neutron requirements and potential sources for fusion development
[DE85-901723] N86-19183
IPNS grooved, solid methane moderator
[DE85-018401] N86-19222
NEW YORK
New York State Police remote communications site small wind energy conversion system
[TI85-901683] N86-19784
NEWTONIAN FLUIDS
Finite element calculation of generalized Newtonian flow N86-18655
NICKEL
Subsurface transport of contaminants from energy process waste leachates
[DE86-001225] N86-18805
NICKEL ALLOYS
Certain features of fine structure in Fe-Ni alloys N86-18483
Welding procedure specification: Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium-molybdenum
[DE86-001517] N86-18765
NICKEL COMPOUNDS
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497
NICKEL ZINC BATTERIES
Reaction profiles in porous electrodes
[DE85-016512] N86-18631
NIGHT VISION
Night vision manual for the flight surgeon
[AD-A159720] N86-18961
NIGHTGLOW
The middle atmosphere above Andoya Norway during the winter 1983/84 as derived from metrockets and OH nightglow observations N86-18818
NITRAMINE PROPELLANTS
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
NITRIC OXIDE
Project MAP/Globus NOx: Coordinated observations of nitrogen oxides in the middle atmosphere N86-18847
NITRILES
The effect of barrier coatings on the cure rate and fluid resistance of polysulphide sealants
[AD-A160728] N86-18561
NITROGEN
Analysis for impurities in helium using the helium ionization detector, report of investigations 1985
[PB85-245157] N86-18476
NITROGEN OXIDES
Development of combined nitrogen oxide/sulfur oxide environmental-control technology
[DE86-001301] N86-18804
Ozone and nitrogen oxides in the middle atmosphere: A three-dimensional model simulation --- high latitude N86-18850
Radiative lifetimes and kinetic studies of metastable NO(+)(a 3 sigma(+)) and O2(+)(a 4 pi sub u)
[AD-A159759] N86-19122
NITROMETHANE
Experimental studies in molecular fragmentation: Processes, energetics and diagnostics
[AD-A160745] N86-19152
NOCTILUCENT CLOUDS
The Cold Arctic Mesopause Project (CAMP) campaign 1982 N86-18830
NOISE (SOUND)
Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study
[AD-A160799] N86-18974
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] N86-18981
NOISE INJURIES
Practical application of basic research on impulse noise hazard
[AD-A160432] N86-19964
NOISE MEASUREMENT
Report of noise measurements with 2 different microphone dispositions on airplane type Cessna F 172L
[VTH-M-510] N86-19143
NOISE PREDICTION (AIRCRAFT)
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127
NOISE REDUCTION
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
High velocity gas jet noise control N86-19123
Laboratory experiments on active suppression of advanced turboprop noise
[NASA-TM-87129] N86-19125
Flight operations noise tests of eight helicopters
[AD-A159835] N86-19127
NOISE SPECTRA
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
NONADIABATIC THEORY
Examination of nonadiabatic effects during an electron beam experiment in the ionosphere N86-18840
NONDESTRUCTIVE TESTS
Probabilistic evaluation of individual aircraft tracking techniques
[AD-A160146] N86-18312
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
Information-measurement system for ultrasonic testing of welded joints N86-18542
Preliminary study of holographic interferometry applied to carbon fibre specimens
[AD-A160770] N86-18698
SXRF studies of bulk crack-tip plastic relaxation
[DE85-018013] N86-18760
Defects and materials characterization by analysis of ultrasonic signals. Study of a technique to measure ultrasonic attenuation
[AD-A159927] N86-19129
Acoustic emission/flaw relationship for in-service monitoring nuclear pressure vessels
[TI85-016647] N86-19139
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
NONFERROUS METALS
USSR Report: Materials Science and Metallurgy N86-18510
NONLINEAR EVOLUTION EQUATIONS
The L sup p estimates for the nonlinear space-homogeneous Boltzmann equation
[CTH-MATH-1985-12] N86-19091
NONLINEAR SYSTEMS
Frequency domain non-linear signal processing apparatus and method for discrimination against non-Gaussian interference
[AD-D011931] N86-18584
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
Nonlinear analysis of Ubitron/Free-Electron laser amplifiers in three-dimensions
[AD-A160631] N86-18722
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
INGRID: A three-dimensional mesh generator for modeling nonlinear systems
[DE86-000749] N86-19005
NONLINEARITY
Elastic buckling of thin-walled unstiffened circular cylinders under bending, axial compression and internal pressure
[ESDU-84006] N86-18744
Simulated ground response using nonlinear elastic moduli
[AD-A160590] N86-18885
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217
NONNEWTONIAN FLUIDS
Finite element methods for non-Newtonian flows N86-18656
NONPARAMETRIC STATISTICS
Inference for stationary random fields given Poisson samples
[AD-A160191] N86-19106
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110
NORMAL DENSITY FUNCTIONS
A note on asymptotic joint distribution of the Eigenvalues of a noncentral multivariate F matrix
[AD-A160422] N86-19082
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
An equation for one-sided tolerance limits for normal distributions
[AD-A159831] N86-19097
Estimation of palm measures of stationary point processes
[AD-A160516] N86-19114
NORMALITY
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080
NORTH AMERICA
Monthly and seasonal weather outlook for August 1985, volume 39, number 15, July 30, 1985 N86-18935
NORTH SEA
Laser Doppler wind profile measurements above sea level --- North Sea
[DFVLR-FB-85-48] N86-18934
NORWAY
The Norwegian scientific balloon and sounding rocket program 1985-1988 N86-18816
The middle atmosphere above Andoya Norway during the winter 1983/84 as derived from metrockets and OH nightglow observations N86-18818
NOZZLE GEOMETRY
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
NUCLEAR FUSION
Simulations of fusion plasmas by A 3-D, E-M particle code
[DE85-008642] N86-19214
NUCLEAR MAGNETIC RESONANCE
Complex molecular motions in bulk hard segment polyurethanes: A deuterium NMR study
[AD-A159760] N86-18459
Layered magnetic superlattices
[DE85-018368] N86-19236
NUCLEAR PHYSICS
New meson-nucleus dynamics from studies of (pion, eta meson) (pion, 2 pion)
[DE85-012753] N86-19166
Nuclear experiments
[DE85-004881] N86-19178
Nuclear Science Division
[DE85-013312] N86-19179
Cyclotron-based nuclear science
[DE85-017620] N86-19220
NUCLEAR POWER PLANTS
Thermal stability of certain hydrated phases in systems made using portland cement
[AD-A160443] N86-18553
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
Factors affecting manufacturing costs of complex systems, and the role of new technologies in reducing these costs
[DE85-018557] N86-19041
Overview of DOE/ONS criticality safety projects
[DE86-001334] N86-19187

NUCLEAR RADIATION
Development of performance assessment methodology for nuclear waste isolation in geologic media
[TI85-017813] N86-19167

NUCLEAR REACTIONS
If you like low P/sub T/ multiparticle physics, you'll love nucleus-nucleus interactions or Do E/sub T/ distributions obey KNO scaling in high energy pp and nucleus-nucleus collisions
[DE86-000633] N86-19186

NUCLEAR REACTOR CONTROL
Overview of DOE/ONS criticality safety projects
[DE86-001334] N86-19187

NUCLEAR REACTORS
Acoustic emission/flaw relationship for in-service monitoring nuclear pressure vessels
[TI85-016647] N86-19139
Nuclear safety technology and public acceptance
[BLL-CE-TRANS-8123(9022.09)] N86-19146

NUCLEAR RESEARCH
Technical advisory on SSC site criteria and catalog of site information needs
[DE86-000218] N86-19223

NUCLEAR STRUCTURE
Cyclotron-based nuclear science
[DE85-017620] N86-19220

NUCLEI
Antiproton annihilations in nuclei
[DE85-010729] N86-19159

NUCLEONS
New meson-nucleus dynamics from studies of (pion, eta meson) (pion, 2 pion)
[DE85-012753] N86-19166
If you like low P/sub T/ multiparticle physics, you'll love nucleus-nucleus interactions or Do E/sub T/ distributions obey KNO scaling in high energy pp and nucleus-nucleus collisions
[DE86-000633] N86-19186

NUCLEOTIDES
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956

NUMERICAL ANALYSIS
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
Computation of the radiation characteristics of a generalized phased array
[NASA-TM-87185] N86-18586
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
Multigrid method for nearly singular and slightly indefinite problems
[NASA-CR-178026] N86-18991
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003
Some properties of n-dimensional triangulations
[NASA-CR-176535] N86-19009
Conceptual design of a data base for numerical simulator
[NAL-TR-869] N86-19047
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086

NUMERICAL CONTROL
Fluorescence spectrophotometers
[DE85-010686] N86-18703
Distributed architecture and fast parallel algorithms in real-time robot control N86-19055
Tevatron extraction microcomputer
[DE85-016985] N86-19170

NUMERICAL INTEGRATION
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882

NUMERICAL WEATHER FORECASTING
Reports from the German Meteorological Service. Number 168: A one-dimensional numerical model for the prediction of fog
[ISBN-3-88148-217-2] N86-18889
A comparison of moisture variables in the vertical interpolations of a 4-D assimilation system
[AD-A160464] N86-18925

NYLON (TRADEMARK)
The minituft surface flow visualisation method: Experience of use in the RAE 5m pressurised low-speed wind tunnel
[AD-A160715] N86-18332

O

OBLIQUE SHOCK WAVES
Collision of Mach reflections with a 90 deg ramp in air and CO2
[UTIAS-290] N86-18645

OBSERVATION
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898

OCEAN BOTTOM
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734
Physical oceanographic characteristics of the Nares Plain region of the western North Atlantic
[DE86-000059] N86-18948
A study to determine the merit of ocean borehole systems for acoustic detection
[AD-A160149] N86-19133

OCEAN CURRENTS
Hydrographic data from the OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program: OPTOMA16, 20 May - 23 June 1985
[AD-A160270] N86-18942

OCEAN MODELS
Hydrographic data from the OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program: OPTOMA16, 20 May - 23 June 1985
[AD-A160270] N86-18942
OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program interim report: The Airborne Ocean Thermal Structure Mapping Project
[AD-A160283] N86-18943
Directional wave measurement and analysis
[AD-A160760] N86-18947

OCEAN SURFACE
Synthetic aperture radar imaging of the sea surface during the PROMESS experiment N86-18372
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86 18926
Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940
Hydrographic data from the OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program: OPTOMA16, 20 May - 23 June 1985
[AD-A160270] N86-18942
A semiempirical model for Doppler spectral features of microwave radar sea scatter
[AD-A160576] N86-18946
Directional wave measurement and analysis
[AD-A160760] N86-18947

OCEAN TEMPERATURE
Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940
Review of the Raman backscattering technique for the remote measurement of subsurface temperature and salinity: Volume 1
[AD-A160466] N86-18945

OCEANOGRAPHIC PARAMETERS
U.S. Navy climatic study of the Caribbean Sea and Gulf of Mexico. Volume 1: West Caribbean Sea and Central American waters
[AD-A160159] N86-18917
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941
Hydrographic data from the OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program: OPTOMA16, 20 May - 23 June 1985
[AD-A160270] N86-18942
OPTOMA (Ocean Prediction Through Observations, Modeling and Analysis) Program interim report: The Airborne Ocean Thermal Structure Mapping Project
[AD-A160283] N86-18943

OCEANOGRAPHY
Electromagnetic measurements of multi-year sea ice using impulse radar
[AD-A160737] N86-18598
Physical oceanographic characteristics of the Nares Plain region of the western North Atlantic
[DE86-000059] N86-18948

OCEANS
USSR report: Transportation
[JPRS-UTR-85-014] N86-18284
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799

OCTANES
Catalytic combustion of gas turbines: Process modelling and kinetic study of iso-octane oxidation N86-18326

OFFSHORE ENERGY SOURCES
Drilling risers for great water depths: Advantage for mass reduction by means of composite materials
[SNIAS-852-430-101] N86-18454

OIL EXPLORATION
Drilling risers for great water depths: Advantage for mass reduction by means of composite materials
[SNIAS-852-430-101] N86-18454

OIL POLLUTION
Remote sensing of oil on sea: Lidar and passive IR experiments N86-18370
Operational remote sensing of oil slicks at sea by microwave radiometry N86-18371
Microbial degradataion of oil in the marine environment
[FOA-C-40219-B4] N86-18807

ON-LINE SYSTEMS
Presentation of the astronomical data base Set of Identifications, Measurements, and Bibliography for Astronomical Data (SIMBAD) N86-18394
NCSMEMO, an IBM PC program using dBASE 3 to cross-reference letters
[DE85-018210] N86-19038

ONBOARD DATA PROCESSING
Bit error rate testing of a proof-of-concept model baseband processor
[NASA-TM-87206] N86-18343
Standard stars for the on-orbit photometric payload calibration --- HIPPARCOS N86-18406
Real time: Automatic vehicle potential determination from ESA measurements. Part 1. The count ratio algorithm
[AD-A160459] N86-18435

ONE DIMENSIONAL FLOW
Subdivision Froude number
[AD-A160486] N86-18674

OPERATORS (MATHEMATICS)
Structural properties of randomized times
[AD-A160214] N86-19077

OPERATORS (PERSONNEL)
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

OPHTHALMOLOGY
Night vision manual for the flight surgeon
[AD-A159720] N86-18961

OPTICAL COMMUNICATION
Microbending fiber optic acoustic sensor
[AD-D011938] N86-19124

OPTICAL DATA PROCESSING
Polychromatic time-integrating optical processor for high-speed ambiguity processing
[AD-D011942] N86-19190
Optical interarray processing
[AD-A160256] N86-19192

OPTICAL EQUIPMENT
Microwave semiconductor research - materials, devices and circuits
[AD-A160581] N86-18624
Mechanics of a two axes passive precision level monitor for machine tools: Volume 2
[AD-A160151] N86-18732
Optical interarray processing
[AD-A160256] N86-19192
Problem Solving Workshop 2: Selecting Objective Lenses
[DE85-014471] N86-19197

OPTICAL FILTERS
Manufacturing methods and technology (MANTECH) program: Supplement. Qualification testing of infrared detectors
[AD-A160455] N86-18619
Study of optical sound generation and amplification
[AD-A160758] N86-19196

OPTICAL MEASURING INSTRUMENTS
Optical electromagnetic radiation detector
[AD-D011929] N86-18609
X-ray goniometer
[AD-D011927] N86-18685

OPTICAL PROPERTIES
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797
Optical functions of silicon at elevated temperatures determined by polarization modulation ellipsometry
[DE86-001427] N86-19201
OPTICAL RADAR
Remote sensing of oil on sea: Lidar and passive IR experiments N86-18370
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718
Analytic reduction of the monostatic lidar multiple backscattering integral
[AD-A160624] N86-18721
The sodium layer above Andoya, Norway, as observed by lidar from January through April 1984 N86-18857
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18930
OPTICAL REFLECTION
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
OPTICAL WAVEGUIDES
An optical waveguide humidity detector
[AD-A160577] N86-18695
OPTIMAL CONTROL
Factorization and reduction methods for optimal control of distributed parameter systems
[NASA-CR-178033] N86-18992
OPTIMIZATION
On the optimality of data processors for signal detection over a class of contaminated noises
[AD-A160213] N86-18617
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
ORBIT SPECTRUM UTILIZATION
An analysis of bi-directional use of frequencies for satellite communications
[NASA-TM-87226] N86-18585
ORBITAL ASSEMBLY
Telescoping space station modules
[NASA-TM-86253] N86-18340
ORBITAL SERVICING
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341
ORBITAL SPACE STATIONS
Space station: ESA views on requirements for experimental and operational Earth observation missions N86-18379
Space research in the era of the space station N86-18872
ORBITS
Metric calibration of the Millstone Hill l-band radar
[AD-A160362] N86-18593
ORGANIC COMPOUNDS
A new polymer for the heat-treatment shop and the operating room N86-18540
ORGANIC MATERIALS
New polymeric materials expected to have superior properties for space-based use
[AD-A160285] N86-18550
Dielectric analysis of thermoset cure
[AD-A160291] N86-18551
ORGANIC PHOSPHORUS COMPOUNDS
Vapor pressure of methylphosphonic dichloride: A compendium
[AD-A160613] N86-18447
ORGANIC SEMICONDUCTORS
New polymeric materials expected to have superior properties for space-based use
[AD-A160285] N86-18550
ORGANISMS
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
ORGANIZATIONS
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060
An annotated bibliography of literature integrating organizational and systems theory
[AD-A160912] N86-19249
Resource directory of DOE information organizations, revision 2
[DE84-015655] N86-19258
ORGANOMETALLIC COMPOUNDS
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
Incorporation of radiohalogens via versatile organometallic reactions: Applications in radiopharmaceutical chemistry
[DE86-000087] N86-19184
ORIFICE FLOW
Workshop on Fundamental Research Issues in Orifice Metering
[PB85-226280] N86-18683
ORIFICES
Workshop on Fundamental Research Issues in Orifice Metering
[PB85-226280] N86-18683
OSCILLATING CYLINDERS
Compact finite difference methods for solving incompressible Navier-Stokes equations around oscillating bodies N86-18661
OSCILLATING FLOW
Axial compressor reversed flow performance
[AD-A160773] N86-18327
OSCILLATIONS
The Shock and Vibration Digest, volume 17, no. 7
[AD-A160321] N86-18747
Study of optical sound generation and amplification
[AD-A160758] N86-19196
OSMOSIS
Reaction profiles in porous electrodes
[DE85-016512] N86-18631
OTS (ESA)
The OTS: Sixth year in orbit N86-18345
The OTS: Seventh year in orbit N86-18346
OUTPUT
Adaptive decentralized control
[AD-A160187] N86-19058
OXIDATION
Catalytic combustion of gas turbines: Process modelling and kinetic study of iso-octane oxidation N86-18326
Corrosion resistant materials in MCFC environment
[DE85-017808] N86-18503
Deuterated polymers: Chemical and physical properties and future prospects
[AD-A160762] N86-18562
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
OXIDE FILMS
Investigation of temperature dependence of growth rate of oxide films on tantalum by method of interference indication
[BLL-M-36385-(5828.4)] N86-18455
Production of vacuum-tight joints in materials by diffusion welding N86-18543
OXIDES
Corrosion resistant materials in MCFC environment
[DE85-017808] N86-18503
OXIDIZERS
Temporal stability of oxidizer solutions: A survey of candidate decon materials in seawater
[AD-A159734] N86-18457
Temporal stability of solid oxidizers at high temperature and humidity
[AD-A159735] N86-18458
Corrosion resistant materials in MCFC environment
[DE85-017808] N86-18503
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-018490] N86-18931
OXYGEN
Airglow O2(1 Sigma) atmospheric band at 8645 Angstrom and the rotational temperature observed at 23 deg S
[INPE-3631-PRE/811] N86-18809
OXYGEN IONS
Radiative lifetimes and kinetic studies of metastable NO(+)(a 3 sigma(+)) and O2(+)(a 4 pi sub u)
[AD-A159759] N86-19122
OXYGEN SPECTRA
Airglow O2(1 Sigma) atmospheric band at 8645 Angstrom and the rotational temperature observed at 23 deg S
[INPE-3631-PRE/811] N86-18809
OZONE
Some aspects of the rapid spatiotemporal variations of stratospheric ozonity N86-18874
OZONOMETRY
Ozone measurements during MAP/WINE --- Sweden N86-18822
Ground-based microwave observations of mesospheric ozone: Intercomparison with measurements obtained by other techniques N86-18846
Ozone and nitrogen oxides in the middle atmosphere: A three-dimensional model simulation --- high latitude N86-18850
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign --- polar regions N86-18856
Some aspects of the rapid spatiotemporal variations of stratospheric ozonity N86-18874

P

PACKAGING
Antistatic packaging material and steel substrates packaged therewith
[AD-D011939] N86-18729
PACKET SWITCHING
A resource conflict resolution problem formulated in continuous time
[AD-A159675] N86-18587
PACKET TRANSMISSION
A resource conflict resolution problem formulated in continuous time
[AD-A159675] N86-18587
PACKETS (COMMUNICATION)
A resource conflict resolution problem formulated in continuous time
[AD-A159675] N86-18587
Minimizing the number of clusters in mobile packet radio networks
[AD-A160127] N86-18590
PAIR PRODUCTION
Experimental studies of elementary particle interactions at high energies
[DE86-001101] N86-19177
PANORAMIC CAMERAS
Outstanding results from one year's activities of the ESA Metric Camera Working Group N86-18359
PARABOLAS
A parameterized procedure for determining real height from ionograms by use of generalized parabolic profiles
[AD-A160383] N86-19121
PARABOLIC DIFFERENTIAL EQUATIONS
Reduction of the effects of the communication delays in scientific algorithms on message passing MIMD architectures
[NASA-CR-178044] N86-19010
PARABOLIC REFLECTORS
Out-of-band response of reflector antennas
[PB85-224476] N86-18644
PARALLEL PROCESSING (COMPUTERS)
Adapting a Navier-Stokes code to the ICL-DAP
[NASA-CR-178034] N86-18651
Program of research in computer vision, image processing and architectures for image processing
[AD-A160248] N86-18694
Parallel direct methods for solving banded linear systems
[AD-A160148] N86-18995
Partitioning and packing mathematical simulation models for calculation on parallel computers
[NASA-TM-87170] N86-19008
A modified frontal technique suitable for parallel systems
[AD-A159769] N86-19014
Algorithmic study on systolic array structures
[AD-A160006] N86-19015
On using inverted trees for updating graph properties
[AD-A160135] N86-19019
Parallel matrix computations
[AD-A160240] N86-19025
Computing visible-surface representations
[AD-A160602] N86-19085
PARAMETER IDENTIFICATION
Design method for the calculation of performances and flap movement of flexible wind turbine blades
[VTH-M-453] N86-18795
On structure determination for polynomial input-output differential systems
[AD-A160225] N86-19078
Multiple beamforming
[AD-A159979] N86-19132
PARAMETERIZATION
Radiative flux parameterizations in a boundary layer model
[INPE-3647-RPE/484] N86-18808
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
Transformation of two and three-dimensional regions by elliptic systems
[NASA-CR-176476] N86-19063
A parameterized procedure for determining real height from ionograms by use of generalized parabolic profiles
[AD-A160383] N86-19121
PARTIAL DIFFERENTIAL EQUATIONS
On the solution of circulant linear systems
[AD-A159841] N86-19067

A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068
A two-dimensional mesh moving technique for time dependent partial differential equations
[AD-A160204] N86-19073
Values in the interior of the L sup 2 minimal solutions of the Delta Delta bar equation in the unit ball of C sup n
[CTH-MATH-1985-11] N86-19090

PARTICLE ACCELERATION
Are parallel electric fields really the cause of auroral particle acceleration? N86-18826

PARTICLE ACCELERATOR TARGETS
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171

PARTICLE ACCELERATORS
An estimate of the contributions of bellows to the impedances and beam instabilities of the SSC
[DE85-017363] N86-19169
Torsatron equilibrium and stability studies
[DE85-018088] N86-19216
High energy accelerator and colliding beam user group
[DE85-008093] N86-19219
Technical advisory on SSC site criteria and catalog of site information needs
[DE86-000218] N86-19223

PARTICLE BEAMS
Noninterceptive beam diagnostics
[DE86-000793] N86-19176

PARTICLE COLLISIONS
Distortion of He emission lines after fast-ion collisions
[DE85-018347] N86-19161

PARTICLE EMISSION
Fracto-emission from polymers
[AD-A160510] N86-18555
Emission characterization of a 2-stroke heavy-duty diesel coach engine and vehicle with and without a particulate trap
[PB85-239770] N86-18742

PARTICLE IN CELL TECHNIQUE
Particle-in-cell simulations of the lasertron
[DE85-012698] N86-18723

PARTICLE INTERACTIONS
Association/dissociation processes in dense gases
[AD-A160236] N86-19148
Nuclear Science Division
[DE85-013312] N86-19179
If you like low P/sub T/ multiparticle physics, you'll love nucleus-nucleus interactions or Do E/sub T/ distributions obey KNO scaling in high energy pp and nucleus-nucleus collisions
[DE86-000633] N86-19186
Calculation of H2O far-wing absorption within the single-perturber approximation
[AD-A160405] N86-19193

PARTICLE MASS
Study of large aerosol particles
[AD-A160379] N86-18880

PARTICLE MOTION
Complex molecular motions in bulk hard segment polyurethanes: A deuterium NMR study
[AD-A159760] N86-18459

PARTICLE PRECIPITATION
Practical aspects of measuring dry deposition
[DE85-018465] N86-18802

PARTICLE PRODUCTION
Antiproton annihilations in nuclei
[DE85-010729] N86-19159

PARTICLE SIZE DISTRIBUTION
Study of large aerosol particles
[AD-A160379] N86-18880

PARTICLE TRAJECTORIES
A stochastic model for particle impingements on orbiting spacecraft
[NASA-TP-2550] N86-19095
Fractal behavior of single-particle trajectories and isonets in isotropic and anisotropic fluids
[DE85-018343] N86-19160

PASSENGER AIRCRAFT
Features of planned IL-96-300, IL-114 aircraft N86-18325

PATHOLOGICAL EFFECTS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969

PATTERN RECOGNITION
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314
Speech recognition: Acoustic, phonetic and lexical
[AD-A160008] N86-18589
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696
Eye movements and spatial pattern vision
[AD-A160408] N86-18963
Simulation and evaluation of the AT and T proposed pattern recognition algorithm for group 4 facsimile
[AD-A160864] N86-19037
Automatic processing of Navy message narrative
[AD-A159670] N86-19056

PAYLOAD INTEGRATION PLAN
Spacelab special: STS 51-F/SL-2 N86-18436
Spacelab special: EURECA N86-18437
First German Spacelab missions, no. 6 N86-18979

PAYLOADS
High-Altitude Recovery Program (HARP) --- sounding rocket payloads N86-18866

PERFORMANCE PREDICTION
Design method for the calculation of performances and flap movement of flexible wind turbine blades
[VTH-M-453] N86-18795

PERFORMANCE TESTS
Performance characteristics of an isolated coannular plug nozzle at transonic speeds
[NASA-TM-87606] N86-18292
Axial compressor reversed flow performance
[AD-A160773] N86-18327
Development of capsular adhesive systems and evaluation of their stability
[AD-A159913] N86-18546
Test and evaluation of teleconferencing video codecs transmitting at 1.5 MBps
[AD-A160845] N86-18602
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697
Test plan for high temperature/high pressure acoustic agglomerator
[DE85-017221] N86-18704
Onsite 40-kilowatt fuel cell power plant manufacturing and field test program
[NASA-CR-174988] N86-18773
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774
Solar Simulation Laboratory description and manual
[AD-A159729] N86-18778
Output calculations of the GIROMILL wind turbine
[VTH-M-484] N86-18796
Performance evaluation of the JRS automatic microcode generating system
[AD-A159671] N86-19011

PERIODIC VARIATIONS
A Markov chain approach to periodic queues
[CTH-MATH-1985-10] N86-19089

PERIODICALS
Digital signal processing
[AD-A159889] N86-18994

PERMEABILITY
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770

PERMITTIVITY
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613

PERSONAL COMPUTERS
The design and implementation of an operating system for the IBM personal computer
[AD-A160875] N86-19052

PERSONALITY
An investigation into effects of environmental changes on locus of control
[AD-A160861] N86-18987

PERSONNEL
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] N86-18989

PERTURBATION THEORY
Convergence to steady state of solutions of Burgers' equation
[NASA-CR-178017] N86-19064
Calculation of H2O far-wing absorption within the single-perturber approximation
[AD-A160405] N86-19193

PETROLEUM PRODUCTS
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557

PH
Effect of inhibitors on electrochemical conditions during tests of specimens of 40 Kh steel for static corrosion cracking resistance N86-18526

PH FACTOR
Effect of medium pH on hydrogen permeability of passivating films and rate of growth of corrosion cracks in 40KhN steel N86-18524

PHARMACOLOGY
Incorporation of radiohalogens via versatile organometallic reactions: Applications in radiopharmaceutical chemistry
[DE86-000087] N86-19184

PHASE CONJUGATION
Quantum theory of multiwave mixing N86-19241

PHASE LOCKED SYSTEMS
Digital phase-locked loop speed control for a brushless dc motor
[AD-A159977] N86-18614

PHASE SHIFT
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696
Laboratory experiments on active suppression of advanced turboprop noise
[NASA-TM-87129] N86-19125

PHASE SHIFT CIRCUITS
Optical interarray processing
[AD-A160256] N86-19192

PHASE VELOCITY
An experimental investigation of acoustic propagation in saturated sands with variable fluid properties
[AD-A159930] N86-19130

PHASED ARRAYS
Computation of the radiation characteristics of a generalized phased array
[NASA-TM-87185] N86-18586

PHONETICS
Speech recognition: Acoustic, phonetic and lexical
[AD-A160008] N86-18589

PHONONS
Determination of the surface phonon dispersion relations for monolayer, bilayer, trilayer and thick Kr(111) films physisorbed on Ag(111) by inelastic He scattering
[AD-A159761] N86-19229
Helium scattering studies of the surface structure and dynamics of rare gas crystals
[AD-A159942] N86-19232

PHOSPHAZENE
Polyphosphazenes with etheric side groups: Prospective biomedical and solid electrolyte polymers
[AD-A160549] N86-18556

PHOSPHINES
Preparation of P-N-H and p-p compounds from a silylated amino(methylene) phosphine
[AD-A159829] N86-18443
Polymer-based catalysts
[DE85-007904] N86-18567

PHOSPHORIC ACID
Phosphoric acid electric utility fuel cell technology development
[NASA-CR-176496] N86-18638

PHOSPHORUS
Polyphosphazenes with etheric side groups: Prospective biomedical and solid electrolyte polymers
[AD-A160549] N86-18556
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182
Surface and interfacial properties of InP
[AD-A159912] N86-19230

PHOTOABSORPTION
Photogeneration of confined soliton pairs (Bipolarons) in polythiophene
[AD-A160157] N86-18616

PHOTODETACHMENT
Studies of compound states of negative ions using laser beams
[AD-A160483] N86-18719

PHOTODIODES
Manufacturing methods and technology (MANTECH) program: Supplement. Qualification testing of infrared detectors
[AD-A160455] N86-18619
Hybrid Schottky infrared focal plane array
[AD-D011934] N86-18686

PHOTODISSOCIATION
Production of CN (A2pi i) in the photolysis of acetonitrile at 158 nm
[AD-A160175] N86-18445

Experimental studies in molecular fragmentation: Processes, energetics and diagnostics
[AD-A160745] N86-19152

PHOTOELECTRIC EMISSION
Hybrid Schottky infrared focal plane array
[AD-D011934] N86-18686

PHOTOELECTRON SPECTROSCOPY
Triply differential studies of atomic and molecular photoionization using synchrotron radiation
[AD-A160587] N86-19150
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques, 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239

PHOTOELECTRONS
Developments in gas detectors for synchrotron X-ray radiation
[DE86-001207] N86-18705

PHOTOGRAMMETRY
Calibration of an on-ground aircraft tracking radar by aerial photogrammetry
[NAL-TR-861] N86-18311
Geometric rectification and photogrammetric reconstruction of SPOT images N86-18384

PHOTOGRAPHIC EQUIPMENT
Problem Solving Workshop 2: Selecting Objective Lenses
[DE85-014471] N86-19197

PHOTOGRAPHIC MEASUREMENT
Comparison of two MTF measurement methods: Sine-wave versus edge gradient analysis
[AD-A160800] N86-18700

PHOTOGRAPHY
Development and design of an advanced directional shear
[AD-A159647] N86-18751

PHOTOIONIZATION
Triply differential studies of atomic and molecular photoionization using synchrotron radiation
[AD-A160587] N86-19150

PHOTOLYSIS
Production of CN (A2pi i) in the photolysis of acetonitrile at 158 nm
[AD-A160175] N86-18445

PHOTOMETERS
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
Low-cost microprocessor controlled shadowband radiometer
[DE85-016614] N86-18702
Polychromatic time-integrating optical processor for high-speed ambiguity processing
[AD-D011942] N86-19190

PHOTOMULTIPLIER TUBES
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718

PHOTONS
Photon emission in deformation and failure of metals N86-18527
Developments in gas detectors for synchrotron X-ray radiation
[DE86-001207] N86-18705
Experimental studies of elementary particle interactions at high energies
[DE86-001101] N86-19177
Luminescence from metals and insulators
[DE86-011339] N86-19200

PHOTOSPHERE
The detection of global convective wave flows on the Sun N86-19276

PHOTOVOLTAIC EFFECT
Research progress in the DOE/SERI Amorphous Silicon Research Project
[DE85-008796] N86-18786
Status of the light-induced effect in amorphous silicon material and in a-Si solar cells
[DE85-016857] N86-18790
SOLERAS: Photovoltaic Power Systems Project. Rural solar applications, project summary
[DE86-001280] N86-18793

PHYSICAL CHEMISTRY
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557

PHYSICAL FITNESS
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] N86-18967
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982

PHYSICAL OPTICS
Out-of-band response of reflector antennas
[PB85-224476] N86-18644

PHYSIOLOGICAL EFFECTS
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600

PHYSIOLOGICAL FACTORS
The beginnings of airborne weightlessness research
[AD-A160575] N86-18966

PHYSIOLOGICAL RESPONSES
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] N86-18955
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] N86-18965
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] N86-18967

PHYSIOLOGICAL TESTS
The effects of vocal versus manual response modalities on multi-task performance
[AD-A159830] N86-18588

PHYSIOLOGY
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976

PIEZOELECTRIC TRANSDUCERS
Piezoelectric and electrostrictive materials for transducer applications
[AD-A160465] N86-18620

PIEZOELECTRICITY
Piezoelectric and electrostrictive materials for transducer applications
[AD-A160465] N86-18620

PILOT PERFORMANCE
The effects of vocal versus manual response modalities on multi-task performance
[AD-A159830] N86-18588

PILOTS (PERSONNEL)
Effects of noise and workload on a communication task
[AD-A160743] N86-18599

PIONS
New meson-nucleus dynamics from studies of (pion, eta meson) (pion, 2 pion)
[DE85-012753] N86-19166
Nuclear Science Division
[DE85-013312] N86-19179

PIPES (TUBES)
Low-cycle fatigue and crack resistance of boiler pipes and steam lines made of 12Kh1MF steel N86-18515
Suitability of polyvinyl chloride pipe for monitoring TNT, RDX, HMX, and DNT in groundwater
[AD-A160733] N86-18798

PLANE WAVES
Plane wave scattering by thin linear dielectric-coated wires and dielectric strips: A moment method approach with physical basis functions N86-18581
The effect of surface conditions on the Mach reflection phenomenon
[AD-A160535] N86-18675
Sound transmission into shells doubly excited by incident waves and by arbitrary surface forcing functions
[AD-A159936] N86-19131

PLANET EPHEMERIDES
Minor planets in the HIPPARCOS program N86-18416

PLANETARY MAPPING
Planetary image conversion task
[NASA-CR-176534] N86-19267

PLANETS
Minor planets in the HIPPARCOS program N86-18416
Complementary astrometric observations of minor planets at Barcelona — HIPPARCOS N86-18417

PLANKTON
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801

PLANNING
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630

PLANTS (BOTANY)
Extremely Low Frequency (ELF) communications system ecological monitoring program. Summary of 1984 progress
[AD-A160793] N86-18600

PLASMA CONTROL
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18718
Helical fluctuation in Reversed Field Pinch (RFP) plasma
[IPPJ-748] N86-19203
Magnetohydrodynamic stability of spheromak plasma in spheroidal flux conserver: Application of Mercier criterion
[IPPJ-747] N86-19205

PLASMA CURRENTS
Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak
[IPPJ-746] N86-19204
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217

PLASMA DYNAMICS
Laser damage to spherical targets
[AD-A159717] N85-18710

PLASMA ELECTRODES
Fundamental processes in partially ionized plasmas
[AD-A160011] N86-19212

PLASMA EQUILIBRIUM
Magnetohydrodynamic stability of spheromak plasma in spheroidal flux conserver: Application of Mercier criterion
[IPPJ-747] N86-19205
Torsatron equilibrium and stability studies
[DE85-016086] N86-19216
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217

PLASMA FREQUENCIES
Temporal stability of solid oxidizers at high temperature and humidity
[AD-A159735] N86-18458
Dispersion surfaces --- plasma waves
[KGI-PREPRINT-067] N86-19207
Waves below the proton gyrofrequency in a multicomponeny plasma
[KGI-PREPRINT-189] N86-19209

PLASMA HEATING
Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak
[IPPJ-746] N86-19204

PLASMA INTERACTIONS
Fundamental processes in partially ionized plasmas
[AD-A160011] N86-19212

PLASMA PHYSICS
Laser physics and laser techniques
[AD-A160143] N86-18714

PLASMA RESONANCE
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone
[KGI-PREPRINT-081] N86-19208

PLASMA WAVES
Acceleration of auroral electrons by lower-hybrid waves N86-18827
Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak
[IPPJ-746] N86-19204
Dispersion surfaces and ion wave instabilities in space plasmas
[KGI-PREPRINT-190] N86-19206
Dispersion surfaces --- plasma waves
[KGI-PREPRINT-067] N86-19207
Waves below the proton gyrofrequency in a multicomponeny plasma
[KGI-PREPRINT-189] N86-19209

PLASMA-ELECTROMAGNETIC INTERACTION
Examination of nonadiabatic effects during an electron beam experiment in the ionosphere N86-18840
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone
[KGI-PREPRINT-081] N86-19208

PLASMAS (PHYSICS)
Simulations of fusion plasmas by A 3-D, E-M particle code
[DE85-008642] N86-19214

PLASTERS
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559

PLASTIC AIRCRAFT STRUCTURES
Sukhoy design bureau builds sport plane made of plastic N86-18324

PLASTIC DEFORMATION
Influence of temperature on microplasticity and cyclical strength of 1201 alloy N86-18514
Surface hardening of gas turbine engine vanes in an ultrasonic field N86-18541
PLASTIC FLOW
Thermoelastic-plastic flow in solids
[DE86-001230] N86-18761
PLASTIC MEMORY
Beam addressed memory system
[AD-D011930] N86-18993
PLASTIC PROPERTIES
Influence of temperature on microplasticity and cyclical strength of 1201 alloy N86-18514
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159882] N86-18752
PLASTICIZERS
Plasticization of glassy polymers by CO(2)
[AD-A159772] N86-18545
PLASTICS
Deformation and variable loading of metal-polymer two-layer plates N86-18518
PLATELETS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970
PLATES (STRUCTURAL MEMBERS)
Improving performance of hard-alloy plates by thermomagnetic abrasion treatment N86-18539
Estimation of r.m.s. strain in laminated skin panels subject to random acoustic loading
[ESDU-84008-A] N86-18745
Finite element mesh for a complete solution of a problem with a singularity
[AD-A159890] N86-18754
PLATES (TECTONICS)
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810
PLATINUM
Metal cluster topology: Applications to gold and platinum clusters
[AD-A160637] N86-18498
Spectroscopy of metal/titania systems
[AD-A160698] N86-18499
Binding between carbon atoms and vacancies in platinum
[DE86-000624] N86-19238
PLUG NOZZLES
Performance characteristics of an isolated coannular plug nozzle at transonic speeds
[NASA-TM-87606] N86-18292
PLUMES
Dispersion experiments using short-term releases of an atmospheric tracer
[DE85-018519] N86-18803
PODS (EXTERNAL STORES)
Calculation of the external nacelle surface for single and double stream jet engines for civil aircraft
[VTH-M-445] N86-18301
POINTS (MATHEMATICS)
Poisson-stability as a unifying factor for max-stability and sum-stability
[AD-A160132] N86-19070
Estimation of palm measures of stationary point processes
[AD-A160516] N86-19114
POISSON DENSITY FUNCTIONS
Poisson-stability as a unifying factor for max-stability and sum-stability
[AD-A160132] N86-19070
Characterization of discrete probability distributions by partial independence
[AD-A160130] N86-19103
Construction of exponential Martingales for counting processes
[AD-A160189] N86-19104
Inference for stationary random fields given Poisson samples
[AD-A160191] N86-19106
POLAR REGIONS
Large-scale structure of the middle atmosphere during the winter 1983/84 N86-18817
The middle atmosphere above Andoya Norway during the winter 1983/84 as derived from metrockets and OH nightglow observations N86-18818
Wind corners and wind strata in the mesosphere --- polar regions N86-18821
On the influence on high-latitude convection patterns of polarization electric fields N86-18824
Ozone and nitrogen oxides in the middle atmosphere: A three-dimensional model simulation --- high latitude N86-18850
Turbulent parameters of the lower thermosphere as determined by mass spectrometer during the MAP/WINE campaign --- polar regions N86-18851
On the comparison of turbulent parameters and eddy coefficients in the lower thermosphere --- polar regions; winter N86-18852
Spectral characteristics of positive ion-current fluctuations measured by ion probes --- polar atmosphere N86-18853
The MAP/WINE electron density profiles in the D and E regions: A comparison of EISCAT, PRE rocket data N86-18855
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign --- polar regions N86-18856
The sodium layer above Andoya, Norway, as observed by lidar from January through April 1984 N86-18857
POLAR SUBSTORMS
On the influence on high-latitude convection patterns of polarization electric fields N86-18824
POLARIZATION (WAVES)
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237
POLARIZATION CHARACTERISTICS
On the influence on high-latitude convection patterns of polarization electric fields N86-18824
POLICE
New York State Police remote communications site small wind energy conversion system
[TI85-901683] N86-18784
POLLUTION
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712
POLLUTION CONTROL
Development of combined nitrogen oxide/sulfur oxide environmental-control technology
[DE86-001301] N86-18804
POLLUTION MONITORING
Remote sensing of oil on sea: Lidar and passive IR experiments N86-18370
POLLUTION TRANSPORT
Dispersion experiments using short-term releases of an atmospheric tracer
[DE85-018519] N86-18803
Subsurface transport of contaminants from energy process waste leachates
[DE86-001225] N86-18805
POLOIDAL FLUX
Poloidal rotation of reversed field pinch plasma
[IPPJ-749] N86-19202
Helical fluctuation in Reversed Field Pinch (RFP) plasma
[IPPJ-748] N86-19203
POLYATOMIC MOLECULES
Experimental studies in molecular fragmentation: Processes, energetics and diagnostics
[AD-A160745] N86-19152
POLYBUTADIENE
Block copolymers of isotactic polypropylene and 1,4 polybutadiene
[AD-A160147] N86-18547
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
POLYCRYSTALS
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
POLYETHYLENES
Chemical modification of poly(ethylene imine) for polymeric electrolyte
[AD-A160482] N86-18554
Polymer electrolyte based on poly(ethylene imine) and lithium salts
[AD-A160381] N86-18779
POLYMER PHYSICS
Binary liquid gels
[DE85-014953] N86-18473
Deformation and variable loading of metal-polymer two-layer plates N86-18518
Effect of simple stress on the glass transition of polymers at high pressure
[AD-A160282] N86-18549
POLYMERIC FILMS
New polymeric materials expected to have superior properties for space-based use
[AD-A160285] N86-18550
POLYMERIZATION
Viscosity rise during free radical crosslinking polymerization with inhibition
[AD-A159842] N86-18444
Deuterated polymers: Chemical and physical properties and future prospects
[AD-A160762] N86-18562
Procedure for manufacturing poly (acetylene) foils
[DE86-001259] N86-18566
POLYMERS
A new polymer for the heat-treatment shop and the operating room N86-18540
New polymeric materials expected to have superior properties for space-based use
[AD-A160285] N86-18550
POLYMETHYL METHACRYLATE
Cracking resistance of polycarbonate and polymethylmethacrylate at high loading rates N86-18528
POLYMORPHISM
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956
POLYNOMIALS
The conformal representation of the NACA 642A015 profile
[VTH-M-502] N86-18296
On the interpolation method of Schoenberg and the calculation of profile coordinates
[VTH-M-452] N86-18302
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673
On the maximum-weight clique problem
[AD-A159953] N86-19069
On structure determination for polynomial input-output differential systems
[AD-A160225] N86-19078
Computation of spherical harmonics and approximation by spherical harmonic expansions
[AD-A160445] N86-19083
POLYPROPYLENE
Block copolymers of isotactic polypropylene and 1,4 polybutadiene
[AD-A160147] N86-18547
POLYSTYRENE
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
Polymer-based catalysts
[DE85-007904] N86-18567
POLYURETHANE RESINS
Complex molecular motions in bulk hard segment polyurethanes: A deuterium NMR study
[AD-A159760] N86-18459
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548
The effect of barrier coatings on the cure rate and fluid resistance of polysulphide sealants
[AD-A160728] N86-18561
POLYVINYL ALCOHOL
Conductivity, DSC, FTIR, and NMR studies of Poly(vinyl acetate) complexed with alkali metal salts
[AD-A160450] N86-18467
POLYVINYL CHLORIDE
Suitability of polyvinyl chloride pipe for monitoring TNT, RDX, HMX, and DNT in groundwater
[AD-A160733] N86-18798
POPULATION INVERSION
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
POPULATION THEORY
New measures of diversity
[AD-A160273] N86-19079
Bounds on distributions arising in order restricted inference: The partially ordered case
[AD-A159872] N86-19098
Estimation of population proportion and of probabilities of misclassification from imperfect binomial data by comparison with results of a standard method of known imperfection
[AD-A159926] N86-19099
POROSITY
Lift interference corrections for three-dimensional tunnels with porous walls
[F+W-FO-1742] N86-18305
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
On the mechanism of precipitation of pores in melts and production of metallic foam under reduced gravity N86-18837

An experimental investigation of acoustic propagation in saturated sands with variable fluid properties
[AD-A159930] N86-19130

POROUS MATERIALS
Theory for dynamic compaction of wet porous solids
[DE85-017596] N86-18578
Reaction profiles in porous electrodes
[DE85-016512] N86-18631

PORPHYRINS
Catalytic hydrogenation of carbon monoxide
[DE86-001547] N86-18475

POSITION (LOCATION)
Milliarcsecond structures, VLBI and optical positions of 8 HIPPARCOS radio stars N86-18432

POSITION INDICATORS
Monitoring of GPS (Global Positioning System) system performance
[PB85-242960] N86-18315

POSITIONING
Relative vertical positioning using ground-level transponders with the ERS-1 altimeter N86-18386
Report of noise measurements with 2 different microphone dispositions on airplane type Cessna F 172L
[VTH-M-510] N86-19143

POSITRONS
Experimental studies of elementary particle interactions at high energies
[DE86-001101] N86-19177

POTENTIAL THEORY
An extension of Spitzer's integral representation theorem with an application
[AD-A160184] N86-19072

POWDER (PARTICLES)
Properties of TiC powders produced from titanium or titanium-alloy chips N86-18537
Deformation of Al-Cu powder bodies during liquid-phase sintering N86-18538
Improving performance of hard-alloy plates by thermomagnetic abrasion treatment N86-18539
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
Thermal plasma chemical synthesis of powders
[DE86-000793] N86-19225

POWDER METALLURGY
Treatment of metal powders in attrition machines
[BLL-M-36420-(5282.4F)] N86-18485
Method for refining microstructures of blended elemental powder metallurgy titanium articles
[AD-D011936] N86-18490
Method for refining microstructures of prealloyed powder metallurgy titanium articles
[AD-D011944] N86-18491
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493
Contact fatigue upon low-cycle loading of WC-Co hard alloys designed for pressure working of metals N86-18517
Properties of TiC powders produced from titanium or titanium-alloy chips N86-18537

POWDERED ALUMINUM
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797

POWER EFFICIENCY
Output calculations of the GIROMILL wind turbine
[VTH-M-484] N86-18796

POWER GAIN
Heat pipe space nuclear reactor design assessment. Volume 2: Feasibility study of upgrading the SP-100 heat pipe space nuclear power system
[AD-A160280] N86-19165

POWER SPECTRA
Theoretical studies and data analysis of wave propagation in random media
[AD-A160150] N86-18591

PRECIPITATION (CHEMISTRY)
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
On the mechanism of precipitation of pores in melts and production of metallic foam under reduced gravity N86-18837

PRECIPITATION (METEOROLOGY)
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Soesterberg, Netherlands. Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Kl Sawyer AFB, Michigan
[AD-A159732] N86-18908
The operational meteorology of convective weather. Volume 2: Storm scale analysis
[AD-A159919] N86-18913
Central American climatology
[AD-A159989] N86-18915
Organics as oxidants, reductants and inhibitors in clouds and precipitation
[DE85-018490] N86-18931
Monthly and seasonal weather outlook for August 1985, volume 39, number 15, July 30, 1985 N86-18935
Weather Research Program
[PB85-246940] N86-18936

PRECIPITATION HARDENING
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Effect of hardening treatments on microfluidity of steels and bronzes N86-18529

PRECISION
Monitoring of GPS (Global Positioning System) system performance
[PB85-242960] N86-18315

PREDICTION ANALYSIS TECHNIQUES
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
A comparison of moisture variables in the vertical interpolations of a 4-D assimilation system
[AD-A160464] N86-18925
Time durations of rain rates exceeding specified thresholds
[AD-A160463] N86-18944
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] N86-18965
A comparison of dichotic listening task scoring methods
[AD-A159920] N86-18980
Computer system modelling using a commercial software package N86-19007
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110

PREDICTIONS
An investigation of Band 2 field strengths: The Northampton experiment
[BBC-RD-1985/6] N86-18582
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110

PRESSURE
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892

PRESSURE DISTRIBUTION
Wind-tunnel investigation of the pressure distribution and deduced characteristics of semi-circular cylinder in the vicinity of critical Reynolds number
[NAL-TR-871] N86-18288
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672

PRESSURE GRADIENTS
Axial compressor reversed flow performance
[AD-A160773] N86-18327

PRESSURE MEASUREMENT
Buckling of thin-walled unstiffened circular cylinders under torsion and pressure
[ESDU-84012] N86-18746

PRESSURE SENSORS
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699
A digital microbarograph system
[AD-A160914] N86-18701
Microbending fiber optic acoustic sensor
[AD-D011938] N86-19124

PRESSURE SUITS
Servo operated anti-G suit pressurization system
[AD-D011932] N86-18988

PRESSURE VESSELS
Life extension of components with high cumulative fatigue usage
[TI85-014631] N86-18758
Fluid structural response of axially cracked cylinders
[TI85-016275] N86-18759

PREVENTION
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938

PRINTED CIRCUITS
Modeling crosstalk on printed circuit boards
[AD-A160657] N86-18626

PROBABILITY DENSITY FUNCTIONS
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080

PROBABILITY DISTRIBUTION FUNCTIONS
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
Characterization of discrete probability distributions by partial independence
[AD-A160130] N86-19100

PROBABILITY THEORY
Probabilistic evaluation of individual aircraft tracking techniques
[AD-A160148] N86-18312
Critical behavior of some measure-valued processes
[CTH-MATH-1985-14] N86-19093
Estimation of population proportion and of probabilities of misclassification from imperfect binomial data by comparison with results of a standard method of known imperfection
[AD-A159926] N86-19099
The strong consistency of error probability estimates in NN discrimination
[AD-A160016] N86-19101
Estimation of palm measures of stationary point processes
[AD-A160516] N86-19114

PROBLEM SOLVING
Computational fluid dynamics, volume 2 — conference
[VKI-LS-1985-04-VOL-2] N86-18660
Compact finite difference methods for solving incompressible Navier-Stokes equations around oscillating bodies N86-18661
Application of spectral methods to compressible and incompressible fluid dynamics N86-18663
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060

Accuracy of schemes for the Euler equations with non-uniform meshes
[NASA-CR-178038] N86-19066

PROCEDURES
Welding procedure specification: Machine gas metal arc welding of carbon steel
[DE86-001492] N86-18763
Welding procedure specification: Gas tungsten arc welding of aluminum alloys 1XXX and 3003
[DE86-001508] N86-18764
Welding procedure specification: Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium-molybdenum
[DE86-001517] N86-18765

PROCUREMENT
A survey of public domain software for microcomputers
[AD-A160003] N86-19034

PRODUCT DEVELOPMENT
The present status of the HIPPARCOS project N86-18389
Improved cycling cryopump
[DE85-017732] N86-18738
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774

PRODUCTION MANAGEMENT
Controlling production firing: The FCL language
[AD-A160423] N86-19028

PROGRAM TREND LINE ANALYSIS
Space station common module power system network topology and hardware development
[NASA-CR-178587] N86-18348

PROGRAM VERIFICATION (COMPUTERS)
Comparing the effectiveness of software testing strategies
[NASA-CR-176511] N86-19020
Debugging in a parallel environment
[DE85-010775] N86-19040
Microprocessor local computer network evaluation
[AD-A159914] N86-19048

PROGRAMMING LANGUAGES
Ada (trade name) portability guidelines
[AD-A160390] N86-19027
Controlling production firing: The FCL language
[AD-A160423] N86-19028
Routines
[AD-A160481] N86-19032

PROGRESS
Nuclear experiments
[DE85-004881] N86-19178
Cyclotron-based nuclear science
[DE85-017620] N86-19220

PROJECT MANAGEMENT
The Joint Research Committee (JRC) program on remote sensing N86-18373
First German Spacelab missions, no. 6 N86-18979
Establishing a successful management information system for project management
[DE85-018543] N86-19251
Policy and organizational considerations for improving transfer of university research information and effecting availability of expertise to state agencies
[PB85-232932] N86-19261

PROJECT PLANNING
The Joint Research Committee (JRC) program on remote sensing N86-18373

PROJECTILES
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336
PNS (Parabolized Navier-Stokes) computations for spinning and fin-stabilized projectiles at supersonic velocities
[AD-A160393] N86-18337

PROPAGATION VELOCITY
Resonant generation of ion waves on auroral field lines by positive slopes in ion velocity space
[KGI-PREPRINT-083] N86-19211

PROPELLANT COMBUSTION
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571

PROPELLERS
Laboratory experiments on active suppression of advanced turboprop noise
[NASA-TM-87129] N86-19125

PROPORTIONAL COUNTERS
Developments in gas detectors for synchrotron X-ray radiation
[DE86-001207] N86-18705

PROPULSION SYSTEM PERFORMANCE
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329
Development and application of dynamic simulations of a subsonic wind tunnel
[NASA-TM-87211] N86-18338

PROPULSIVE EFFICIENCY
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329

PROTECTIVE COATINGS
Contribution to the study of titanium nitride and carbide coatings obtained by Physical Vapour Deposition (PVD) on 6-5-2 steel tools
[BLL-RISLEY-TR-5220-(9091.9F)] N86-18488
The effect of barrier coatings on the cure rate and fluid resistance of polysulphide sealants
[AD-A160728] N86-18561

PROTEINS
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] N86-18968

PROTOCOL (COMPUTERS)
Microprocessor local computer network evaluation
[AD-A159914] N86-19048

PROTONS
Nuclear Science Division
[DE85-013312] N86-19179
If you like low P/sub T/ multiparticle physics, you'll love nucleus-nucleus interactions or Do E/sub T/ distributions obey KNO scaling in high energy pp and nucleus-nucleus collisions
[DE86-000633] N86-19186
Waves below the proton gyrofrequency in a multicomponeny plasma
[KGI-PREPRINT-189] N86-19209

PROTOSTARS
Supermassive star formation: The early phases N86-19270

PROVING
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] N86-18986

PSYCHOLOGICAL TESTS
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] N86-18986

PSYCHOMOTOR PERFORMANCE
The effects of vocal versus manual response modalities on multi-task performance
[AD-A159830] N86-18588

PULLEYS
Optimization of mechanisms for force generation by using pulleys and spring
[AD-A159944] N86-18730

PULSE COMMUNICATION
Digital audio editing
[BBC-RD-1985/10] N86-18583
Distributed sensor networks
[AD-A160596] N86-19136

PULSE DOPPLER RADAR
Comparison between ST radar and in situ balloon measurements --- atmospheric sounding N86-18849

PULSE RADAR
A radar altimeter and the validation of its data products over ice surfaces N86-18352

PULSED LASERS
Effects of arsenic doping on the solidification dynamics of pulsed laser melted silicon
[DE85-006107] N86-18564
Particle-in-cell simulations of the lasertron
[DE85-012698] N86-18723
Studies of laser-generated ultrasonic waveforms at different orientations
[AERE-R-11686] N86-19145

PULSED RADIATION
Studies of laser-generated ultrasonic waveforms at different orientations
[AERE-R-11686] N86-19145

PUMPS
Dynamic characteristics of the 48-inch water tunnel drive pump
[AD-A159904] N86-18668
Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737

PURITY
Ultrapure aluminum N86-18535

Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137

PYRANOMETERS
Low-cost microprocessor controlled shadowband radiometer
[DE85-016614] N86-18702

PYROLYTIC MATERIALS
New polymeric materials expected to have superior properties for space-based use
[AD-A160285] N86-18550
Deuterated polymers: Chemical and physical properties and future prospects
[AD-A160762] N86-18562

Q

Q SWITCHED LASERS
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713

QUADRUPOLES
Magnetic measurements on the ring dipoles and quadrupoles for the Los Alamos proton storage ring
[DE86-000785] N86-19175

QUANTITATIVE ANALYSIS
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117

QUANTUM EFFICIENCY
Antireflection coatings for planar silicon solar cells
[DE86-001428] N86-18794

QUANTUM MECHANICS
Quantum theory of multiwave mixing N86-19241
Unification of quantum theory and classical physics
[DE86-000600] N86-19242

QUANTUM THEORY
Production of CN (A2pi i) in the photolysis of acetonitrile at 158 nm
[AD-A160175] N86-18445
The last hurrah for quarkonium physics: The top system
[DE85-012304] N86-19157
The Phi 2 to the 4th power equations of motion. Part 1: Sign and splitting properties. Definition of Phi Lambda-subsets
[REPT-52-A-PT-1] N86-19243

QUANTUM WELLS
Laser physics and laser techniques
[AD-A160143] N86-18714

QUARKS
The last hurrah for quarkonium physics: The top system
[DE85-012304] N86-19157

QUASARS
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344

QUERY LANGUAGES
A mechanism for natural language database N86-19252

QUEUEING THEORY
Computer system modelling using a commercial software package N86-19007
A Markov chain approach to periodic queues
[CTH-MATH-1985-10] N86-19089
An aggregation technique for the transient analysis of stiff Markov systems
[AD-A160286] N86-19112

R

RADAR
Metric calibration of the Millstone Hill l-band radar
[AD-A160362] N86-18593
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] N86-18981

RADAR ANTENNAS
Development of a system to measure the response time of microwave survey instruments to rotating radar antenna patterns
[PB85-230217] N86-18605

RADAR APPROACH CONTROL
TRASSA system introduction causes various problems N86-18285

RADAR EQUIPMENT
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769

RADAR IMAGERY
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333

The development of automatic methods for handling SAR images over land N86-18354
Remote sensing of oil on sea: Lidar and passive IR experiments N86-18370
Synthetic aperture radar imaging of the sea surface during the PROMESS experiment N86-18372
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597

RADAR MAPS
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333

RADAR MEASUREMENT
Electromagnetic measurements of multi-year sea ice using impulse radar
[AD-A160737] N86-18596
The Coordinated EISCAT and Balloon Observations (CEBO): Experiment and results --- auroral particle precipitation N86-18823
Nonisotropic temperature distributions in the auroral F-region as measured with EISCAT N86-18829
Comparison between ST radar and in situ balloon measurements --- atmospheric sounding N86-18849
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873

RADAR SCATTERING
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
A semiempirical model for Doppler spectral features of microwave radar sea scatter
[AD-A160576] N86-18946

RADAR TRACKING
The importance of precision radar tracking data for the determination of density and winds from the high-altitude inflatable sphere N86-18819

RADIAL FLOW
Double wall artery heat pipe
[AD-A160012] N86-18671

RADIAL VELOCITY
Radial velocities for HIPPARCOS with the Fehrenbach objective prisms N86-18424
Radial velocity measurements of late-spectral-type stars --- HIPPARCOS N86-18425

RADIATION ABSORPTION
Clear-air transmission in the 8 to 12-micrometer band at selected stations
[AD-A160625] N86-19195

RADIATION DETECTORS
Optical electromagnetic radiation detector
[AD-D011929] N86-18609
Hybrid Schottky infrared focal plane array
[AD-D011934] N86-18686
Development of a Room Air Monitor System and Workplace Transuranic Aerosol Measurement System
[DE86-001563] N86-18806

RADIATION DOSAGE
Numerical modeling study of gain and downward radiation for selected FM and VHF-TV broadcast antenna systems
[PB85-238046] N86-18606
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975

RADIATION EFFECTS
CRRES/SPACERAD (combined release and radiation effects satellite/space radiation effects program) experiment descriptions
[AD-A160504] N86-18350

RADIATION HAZARDS
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975
Nuclear safety technology and public acceptance
[BLL-CE-TRANS-8123(9022.09)] N86-19146

RADIATION SHIELDING
SP-100 low mass shield design
[DE86-000787] N86-18791

RADIATION TOLERANCE
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975

RADIATIVE HEAT TRANSFER
Catalytic combustion of gas turbines: Process modelling and kinetic study of iso-octane oxidation N86-18326
Radiative heat transfer under transient conditions
[DE86-001240] N86-18682
Radiative flux parameterizations in a boundary layer model
[INPE-3647-RPE/484] N86-18808

RADIATIVE TRANSFER
A two-flow model to simulte the interaction of irradiance with a submerged plant canopy N86-19188

RADII
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160856] N86-18560

RADIO ALTIMETERS
A radar altimeter and the validation of its data products over ice surfaces N86-18352
Geophysical radar altimeters for the 1990's --- satellite-borne N86-18375
Relative vertical positioning using ground-level transponders with the ERS-1 altimeter N86-18386
The ERS-1 altimeter tracker performance simulation N86-18387
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881

RADIO ASTRONOMY
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
Radio observations of HIPPARCOS stars N86-18433
Correlation analysis of the Taurus molecular cloud complex N86-19272

RADIO COMMUNICATION
Evaluation of the ocean technology system's MK 1-S wireless surface unit, MK 1 DCI two diver air radio, MK 1-D-A wireless diver unit, MK 1-D-H hardwire diver unit and MK 1-D/S unit
[AD-A160480] N86-18595

RADIO EMISSION
Relating the HIPPARCOS reference frame to the radio reference frame via Very Large Array (VLA) measurements of the precise position of stellar radio emission N86-18431

RADIO EQUIPMENT
Minimizing the number of clusters in mobile packet radio networks
[AD-A160127] N86-18590

RADIO FREQUENCIES
Research on plasma physics
[AD-A160425] N86-19213
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217

RADIO FREQUENCY HEATING
Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak
[IPPJ-746] N86-19204
Radio frequency vacuum feedthroughs for high-power ICRF heating applications
[DE85-016391] N86-19215

RADIO FREQUENCY INTERFERENCE
An analysis of bi-directional use of frequencies for satellite communications
[NASA-TM-87226] N86-18585
Dust Induced Electro-Magnetic Noise (DIEMN)
[AD-A160565] N86-18596

RADIO GALAXIES
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344

RADIO RECEIVERS
Optical interarray processing
[AD-A160256] N86-19192

RADIO STARS
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
A critical examination of radio star data --- HIPPARCOS Input Catalog N86-18430
Relating the HIPPARCOS reference frame to the radio reference frame via Very Large Array (VLA) measurements of the precise position of stellar radio emission N86-18431
Milliarcsecond structures, VLBI and optical positions of 8 HIPPARCOS radio stars N86-18432
Radio observations of HIPPARCOS stars N86-18433

RADIO TELESCOPES
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344

RADIOACTIVE DECAY
Radiative lifetimes and kinetic studies of metastable NO(+)(a 3 sigma(+)) and O2(+)(a 4 pi sub u)
[AD-A159759] N86-19122

RADIOACTIVE ISOTOPES
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] N86-18978
Development of technology for the design of shallow land burial facilities at arid sites
[DE86-000759] N86-19173

RADIOACTIVE MATERIALS
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques, 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239

RADIOACTIVE WASTES
Development of a sanded expansive salt grout for repository sealing application
[AD-A160431] N86-18552
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-19770
Southeastern Regional geologic characterization report: Volume 1
[DE86-000409] N86-18886
Development of performance assessment methodology for nuclear waste isolation in geologic media
[TI85-017813] N86-19167
Geologic and hydrologic characterization and evaluation of the basin and range province relative to disposal of high-level radioactive waste. Part 3: Geologic and hydrologic evaluation
[TI85-901876] N86-19168
Evaluation of geologic and geophysical techniques for surface-to-subsurface projections of geologic characteristics in crystalline rock
[DE86-000221] N86-19172
Development of technology for the design of shallow land burial facilities at arid sites
[DE86-000759] N86-19173
Status of corrective measures technology for shallow land burial at arid sites
[DE86-000760] N86-19174

RADIOACTIVITY
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] N86-18951

RADIOBIOLOGY
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] N86-18951
Incorporation of radiohalogens via versatile organometallic reactions: Applications in radiopharmaceutical chemistry
[DE86-000087] N86-19184

RADIOCHEMISTRY
Incorporation of radiohalogens via versatile organometallic reactions: Applications in radiopharmaceutical chemistry
[DE86-000087] N86-19184

RADIOGRAPHY
Development and design of an advanced directional shear
[AD-A159647] N86-18751

RADIOMETERS
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699
Low-cost microprocessor controlled shadowband radiometer
[DE85-016614] N86-18702

RADIOMETRIC CORRECTION
Radiometric correction of Modular Optoelectronic Multispectral Scanner (MOMS) CCD images N86-18365

RADIOSONDES
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
Frontal passage data from the SOUSY-VHF-radar
[AD-A160211] N86-18919

RADOMES
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18899

RAIL TRANSPORTATION
USSR report: Transportation
[JPRS-UTR-85-014] N86-18284
USSR report: Transportation
[JPRS-UTR-85-015] N86-18323

RAIN
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Time durations of rain rates exceeding specified thresholds
[AD-A160463] N86-18944

RAMAN SPECTRA
Surface enhancement factors for Raman scattering at silver electrodes. Role of adsorbate-surface interactions and electronic structure
[AD-A160120] N86-18465
Laser pumped frequency standards
[AD-A160606] N86-18720
Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940
Review of the Raman backscattering technique for the remote measurement of subsurface temperature and salinity: Volume 1
[AD-A160466] N86-18945
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149

RAMAN SPECTROSCOPY
Surface-enhanced Raman spectroscopy as a probe or adsorbate-surface bonding: Benzene and monosubstituted benzenes adsorbed at gold electrodes
[AD-A159978] N86-18463
Spectroscopic studies of carbon disulfide at high pressure
[AD-A160456] N86-18468
Review of the Raman backscattering technique for the remote measurement of subsurface temperature and salinity: Volume 1
[AD-A160466] N86-18945

RANDOM ACCESS MEMORY
A methodology for computation reduction for specially structured large scale Markov decision problems
[AD-A159950] N86-19100

RANDOM NOISE
Frequency domain non-linear signal processing apparatus and method for discrimination against non-Gaussian interference
[AD-D011931] N86-18584

RANDOM PROCESSES
Limiting behavior of the norm of products of random matrices and two problems of Geman-Hwang
[AD-A160209] N86-19073
Critical behavior of some measure-valued processes
[CTH-MATH-1985-14] N86-19093
Semicontinuous processes in multidimensional extreme value theory
[CTH-MATH-1985-7] N86-19118

RANDOM VARIABLES
Role of auxiliary variate and additional data in density estimation
[AD-A160287] N86-19080
Characterization of discrete probability distributions by partial independence
[AD-A160130] N86-19103
The amount of noise inherent in bandwidth selection for a kernel density estimator
[AD-A160235] N86-19107
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19108

RANKING
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117

RARE EARTH ALLOYS
Investigation of rapidly quenched rare Earth iron alloys for permanent magnets
[AD-A159946] N86-18494

RARE EARTH COMPOUNDS
Dual mechanism bifunctional polymers for the complexation of lanthanides and actinides
[DE86-000094] N86-18565

RAREFIED GAS DYNAMICS
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712

RATES (PER TIME)
Interaction effects in premixed turbulent combustion
[AD-A160077] N86-18464
Time durations of rain rates exceeding specified thresholds
[AD-A160463] N86-18944
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982

RATIOS
New method for estimating isotopic ratios from pulse-counting mass spectrometric data
[DE86-000095] N86-19044
An equation for one-sided tolerance limits for normal distributions
[AD-A159831] N86-19097

RDX
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570

REACTION KINETICS
Te2 chemiluminescence from alkali Atom-TeCl4 reactions
[AD-A160913] N86-18472
Reaction profiles in porous electrodes
[DE85-016512] N86-18631
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] N86-18978
Radiative lifetimes and kinetic studies of metastable NO(+)(a 3 sigma(+)) and O2(+)(a 4 pi sub u)
[AD-A159759] N86-19122
Association/dissociation processes in dense gases
[AD-A160236] N86-19148

REACTOR MATERIALS
Alloy development for irradiation performance
[DE85-018142] N86-19181
Assessment of neutron requirements and potential sources for fusion development
[DE85-901723] N86-19183

REACTOR SAFETY
Nuclear safety technology and public acceptance
[BLL-CE-TRANS-8123(9022.09)] N86-19146
Overview of DOE/ONS criticality safety projects
[DE86-001334] N86-19187

REAL TIME OPERATION
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774
Guidelines for a minimal Ada Runtime Environment
[AD-A160451] N86-19030

RECOMBINATION REACTIONS
Fundamental processes in partially ionized plasmas
[AD-A160011] N86-19212

RECORDING INSTRUMENTS
Final evaluation of the light pen as the key component in a microcomputer-based simulator
[AD-A160461] N86-18999

RECOVERABLE SPACECRAFT
Spacelab special: EURECA N86-18437

RECRYSTALLIZATION
Effect of graphite cocrystallization growth of diamond single crystals in metal-carbon system N86-18536
Polymer electrolyte based on poly(ethylene imine) and lithium salts
[AD-A160381] N86-18779

RECTIFIERS
GaP/Al/sub x/Ga/sub 1-x/P heterojunction semiconductor controlled rectifier for high-temperature electronic applications
[DE86-000204] N86-18641

RECURSIVE FUNCTIONS
Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159883] N86-18768
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
Adaptive decentralized control
[AD-A160187] N86-19058
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086

RECYCLING
The benefits of recycling silver: A precious metal
[AD-A160895] N86-18501

RED GIANT STARS
Excitation mechanisms in the atmospheres of yellow and red giant and supergiant stars N86-18834

REDUCED GRAVITY
Materials science research in rockets, especially in the fields of fluid physics and of metallic dispersions
N86-18835

REFERENCE STARS
Definition of the survey --- HIPPARCOS Input Catalog
N86-18397
Standard stars for the on-orbit photometric payload calibration --- HIPPARCOS N86-18406
The status of the SRS --- Southern Reference Stars (SRS) HIPPARCOS N86-18423
Report by Subgroup 2130 (link to extragalactic reference objects) --- HIPPARCOS N86-18429
Using Space Telescope to tie the HIPPARCOS and extragalactic reference frames together N86-18434

REFINING
Prospects for developing a technology for producing corrosion resistant steel
[BLL-M-36460-(5828.4)] N86-18478
Method for refining microstructures of blended elemental powder metallurgy titanium articles
[AD-D011936] N86-18490
Method for refining microstructures of prealloyed powder metallurgy titanium articles
[AD-D011944] N86-18491

REFLECTING TELESCOPES
Performances of HIPPARCOS optical telescope
N86-18390

REFLECTION
Reflected impulse near spherical charges
[AD-A160797] N86-18572
Collision of Mach reflections with a 90 deg ramp in air and CO2
[UTIAS-290] N86-18645

REFRACTIVITY
Optical properties of the metals Al, Co, Cu, Au, Fe, Pb, Ni, Pd, Pt, Ag, Ti and W in the infrared and far infrared
[AD-A159736] N86-18492
Laser interferometer measurements of refractive index in shock-compressed materials
[DE85-015505] N86-18678
A computer program to model the Cn2 optical turbulence characteristics of a given atmosphere, its conversion to IBM FORTRAN and utilization
[AD-A159762] N86-18911

REFRACTORY MATERIALS
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18556

REFRACTORY METALS
Method for making alloy additions to base metals having higher melting points
[AD-D011928] N86-18489
Method of making self-aligned IGFET
[AD-D011926] N86-18608

REFRIGERANTS
The performance of a residential heat pump operating with a nonazeotropic binary refrigerant mixture
[DE85-005245] N86-18782

REFRIGERATING MACHINERY
Evaluation of advanced design concepts for absorption heat pumps
[DE85-005090] N86-18780

REGRESSION ANALYSIS
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
The limiting distribution of least squares in an errors-in-variables linear regression model
[AD-A160190] N86-19105
Modified nonparametric kernel estimates of a regression function and their consistencies with rates
[AD-A160267] N86-19110
Covariate measurement error in logistic regression
[AD-A160277] N86-19111
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117

REGULATIONS
DOE explosive safety manual, revision 2
[DE86-001154] N86-18574
Nuclear safety technology and public acceptance
[BLL-CE-TRANS-8123(9022.09)] N86-19146

REGULATORS
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623

RELAXATION METHOD (MATHEMATICS)
Marching iterative methods for the parabolized and thin layer Navier-Stokes equations
[NASA-CR-178028] N86-18850
Multigrid method for nearly singular and slightly indefinite problems
[NASA-CR-178026] N86-18991

RELAXATION TIME
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548

RELIABILITY
Monitoring of GPS (Global Positioning System) system performance
[PB85-242980] N86-18315
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563

RELIABILITY ANALYSIS

Evaluation of the ocean technology system's MK 1-S wireless surface unit, MK 1 DCI two diver air radio, MK 1-D-A wireless diver unit MK 1-D-H hardwire diver unit and MK 1-D/S unit
[AD-A160480] N86-18595

A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630

Reliability evaluation of fault-tolerant multiprocessor systems
[AD-A160234] N86-18996

Statistical aspects of reliability, maintainability and availability
[AD-A160126] N86-19102

An aggregation technique for the transient analysis of stiff Markov systems
[AD-A160286] N86-19112

SPADE (series parallel directed acyclic graph evaluator): A tool for performance and reliability evaluation, revision
[AD-A160289] N86-19113

Assessing system reliability using censoring methodology
[AD-A160616] N86-19115

Radio frequency vacuum feedthroughs for high-power ICRF heating applications
[DE85-016391] N86-19215

RELIABILITY ANALYSIS

The SURE Reliability Analysis Program
[NASA-TM-87593] N86-19096

REMOTE SENSING

Proceedings of the EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications
[ESA-SP-233] N86-18351

Data compression techniques for remote sensing data handling N86-18355

Satellite remote sensing in hydrology N86-18358

The Modular Optoelectronic Multispectral Scanner (MOMS) missions and geoscientific results N86-18364

Evaporation in deserts: Physical aspects and remote sensing techniques N86-18367

Remote sensing for environmental management of British National Parks: Review and preview N86-18368

Operational remote sensing of oil slicks at sea by microwave radiometry N86-18371

The Joint Research Committee (JRC) program on remote sensing N86-18373

European remote sensing: Future needs in education N86-18374

The VARAN-S: An airborne synthetic aperture radar for research in microwave remote sensing N86-18376

Space station: ESA views on requirements for experimental and operational Earth observation missions N86-18379

Remote sensing and archaeological research in Thessaly, Greece. New prospects in archaeological landscape N86-18380

Monitoring of ground fractures caused by volcanic eruptions using remote sensing techniques N86-18383

The ERS-1 observations of lakes for climate research N86-18385

A two-flow model to simulte the interaction of irradiance with a submerged plant canopy N86-19188

REMOTE SENSORS

Proceedings of the EARSeL/ESA Symposium on European Remote Sensing Opportunities: Systems, Sensors, and Applications
[ESA-SP-233] N86-18351

An optical multisensor combining mid IR laser scanner, and near IR multispectral scanner (LIMES) N86-18369

Active and passive remote sensing of ice
[AD-A160075] N86-18939

Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940

REMOVAL

Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737

REPEATERS

New York State Police remote communications site small wind energy conversion system
[TI85-901683] N86-18784

REPETITION

Routines
[AD-A160481] N86-19032

REPLACING

Study of fan-airpump applicability to two-stage air cleaner systems
[AD-A160838] N86-18737

REPORTS

Policy and organizational considerations for improving transfer of university research information and effecting availability of expertise to state agencies
[PB85-232932] N86-19261

RESEARCH AIRCRAFT

Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699

RESEARCH FACILITIES

RLE (Research Laboratory of Electronics) progress report number 127
[AD-A160477] N86-18621

Access to inter-organization computer networks
[AD-A160855] N86-19051

Report of the Workshop on Low-Temperature Neutron Irradiation
[DE85-018118] N86-19180

Research and technology: 1985 annual report of the Lyndon B. Johnson Space Center
[NASA-TM-58272] N86-19280

RESEARCH MANAGEMENT

Research and technology: 1985 annual report of the Lyndon B. Johnson Space Center
[NASA-TM-58272] N86-19280

RESEARCH PROJECTS

Research progress in the DOE/SERI Amorphous Silicon Research Project
[DE85-008796] N86-18786

RESIDENTIAL ENERGY

The performance of a residential heat pump operating with a nonazeotropic binary refrigerant mixture
[DE85-005245] N86-18782

RESIDUAL STRENGTH

Estimating the R-curve from residual strength data
[NASA-TM-87182] N86-18750

RESIDUAL STRESS

Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159882] N86-18752

Review of ultrasonic velocity methods of determining residual stress
[AD-A160769] N86-18756

Comparisons between ultrasonic bulk shear wave velocities in textured steel with application to the measurement of residual stress
[AERE-R-11559] N86-19144

Neutron diffraction methods for the study of residual stress fields
[AERE-R-11630] N86-19240

RESIN BONDING

Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495

RESISTANCE

Cracking resistance of polycarbonate and polymethylmethacrylate at high loading rates N86-18528

Estimating the R-curve from residual strength data
[NASA-TM-87182] N86-18750

RESISTORS

New multiple sheet resistance technology for thin film circuits
[DE85-016459] N86-19637

RESONANCE

Laser pumped frequency standards
[AD-A160606] N86-18720

Investigation of the spatially anisotropic component of the laterally averaged molecular Hydrogen/Ag(111) physisorption potential
[AD-A159726] N86-19228

RESONANCE FLUORESCENCE

Quantum theory of multiwave mixing N86-19241

RESONANCE SCATTERING

Acoustic research report
[AD-A159900] N86-19128

RESONANCE TESTING

Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321

RESONANT VIBRATION

Geometric structure and surface vibrational resonances: The BCC fe(3) surface
[AD-A159916] N86-19231

RESOURCES

Resource directory of DOE information organizations, revision 2
[DE84-015655] N86-19258

RESPIRATION

A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976

RESPONSES

Schottky barrier infrared detector and process
[AD-D011925] N86-18607

RETRIEVAL

High-Altitude Recovery Program (HARP) — sounding rocket payloads N86-18668

REVERSE FIELD PINCH

Poloidal rotation of reversed field pinch plasma
[IPPJ-749] N86-19202

Helical fluctuation in Reversed Field Pinch (RFP) plasma
[IPPJ-748] N86-19203

REVERSED FLOW

Axial compressor reversed flow performance
[AD-A160773] N86-18327

REVISIONS

Resource directory of DOE information organizations, revision 2
[DE84-015655] N86-19258

REYNOLDS NUMBER

Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290

Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667

RHEOLOGY

Nonlinear wave propagation study
[AD-A160179] N86-18679

RHODIUM

Spectroscopy of metal/titania systems
[AD-A160698] N86-19499

RHODIUM COMPOUNDS

Catalytic hydrogenation of carbon monoxide
[DE86-001547] N86-18475

RIEMANN MANIFOLD

Adaptive gridding in two dimensions for optimal accuracy and efficiency
[AD-A159943] N86-18670

RISERS

Drilling risers for great water depths: Advantage for mass reduction by means of composite materials
[SNIAS-852-430-101] N86-18454

RISK

Nuclear safety technology and public acceptance
[BLL-CE-TRANS-8123(9022.09)] N86-19146

RIVERS

USSR report: Transportation
[JPRS-UTR-85-014] N86-18284

Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938

ROBOTICS

A robust layered control system for a mobile robot
[AD-A160833] N86-18736

Toward a surface sketch
[AD-A159693] N86-18767

Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159883] N86-18768

Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel
[NASA-CR-176523] N86-18990

ROBOTS

Optimization of mechanisms for force generation by using pulleys and spring
[AD-A159944] N86-18730

A robust layered control system for a mobile robot
[AD-A160833] N86-18736

Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel
[NASA-CR-176523] N86-18990

Distributed architecture and fast parallel algorithms in real-time robot control N86-19095

ROBUSTNESS (MATHEMATICS)

Hypothesis integration in image understanding systems
[NASA-CR-176510] N86-18692

ROCKET ENGINE CASES
Rocket motor cases in 300 M steel: A pioneer development performed in the Brazilian space program N86-18867

ROCKET ENGINES
Vortex shedding from solid rocket motor propellant inhibitors N86-18569

ROCKET FLIGHT
Materials science research in rockets, especially in the fields of fluid physics and of metallic dispersions N86-18835
Crystal growth furnace developed for floating zone experiments in sounding rockets N86-18836

ROCKET OXIDIZERS
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570

ROCKET PROPELLANTS
Vortex shedding from solid rocket motor propellant inhibitors N86-18569
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570

ROCKET SOUNDING
The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research
[ESA-SP-229] N86-18811
Scientific balloon and sounding rocket program in Germany N86-18812
The French sounding rocket and balloon space research program N86-18813
Swiss scientific balloon and sounding rocket experiments 1983-1985 N86-18814
The Swedish sounding rocket and balloon program N86-18815
The Norwegian scientific balloon and sounding rocket program 1985-1988 N86-18816
The middle atmosphere above Andoya Norway during the winter 1983/84 as derived from metrockets and OH nightglow observations N86-18818
Scattering of electrons in the equatorial plane during a pulsating aurora N86-18828
The Cold Arctic Mesopause Project (CAMP) campaign 1982 N86-18830
Super Cold Arctic Mesopause Project (CAMP): A research project to investigate the polar middle atmosphere in summer with rocket launches from 65 deg-80 deg N N86-18831
The MAP/WINE electron density profiles in the D and E regions: A comparison of EISCAT, PRE rocket data N86-18855

ROCKET-BORNE INSTRUMENTS
Crystal growth furnace developed for floating zone experiments in sounding rockets N86-18836
Advanced mirror furnace for long rod samples — sounding rockets N86-18838
High-Frequency (HF) wave activity observed beam injector from a rocket-borne electron accelerator N86-18839

ROCKS
Development of a sanded expansive salt grout for repository sealing application
[AD-A160431] N86-18552
Evaluation of geologic and geophysical techniques for surface-to-subsurface projections of geologic characteristics in crystalline rock
[DE86-000221] N86-19172

RODS
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
Calculation of ice accretion on cylindrical rods according to Bain's model, and comparison with experimental results — stratus clouds
[DFVLR-FB-85-46] N86-18933

ROLLERS
An analytical investigation of a conceptual design for the station transverse boom rotary joint structure
[NASA-TM-87665] N86-18347
Optimization of mechanisms for force generation by using pulleys and spring
[AD-A159944] N86-18730

ROOMS
Development of a Room Air Monitor System and Workplace Transuranic Aerosol Measurement System
[DE86-001563] N86-18806

ROTARY WING AIRCRAFT
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18316

ROTARY WINGS
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
Effects of blade-to-blade dissimilarities on rotor-body lead-lag dynamics
[AD-A160497] N86-18317

ROTATION
Coupling between eddy currents and rigid body rotation: Analysis, computation, and experiments
[DE85-013877] N86-18604
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696
Poloidal rotation of reversed field pinch plasma
[IPPJ-749] N86-19202

ROTOR BLADES (TURBOMACHINERY)
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774
Mod-2 wind turbine field operations experiment
[NASA-TM-87233] N86-18775

ROTORS
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774

ROUTES
One-dimensional model for mud flows
[AD-A159921] N86-18669

RUBY LASERS
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929

RUNGE-KUTTA METHOD
Accuracy of schemes for the Euler equations with non-uniform meshes
[NASA-CR-178038] N86-19066

RURAL AREAS
Use of Metric Camera for landscape units: Description and mapping N86-18362

RURAL LAND USE
The development of automatic methods for handling SAR images over land N86-18354

RUTHENIUM
Characterization of multilayer Cu films on Ru(0001)
[DE86-000661] N86-18508

S

SAFETY
DOE explosive safety manual, revision 2
[DE86-001154] N86-18574

SAFETY FACTORS
Life extension of components with high cumulative fatigue usage
[TI85-014631] N86-18758

SALINITY
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938
Raman backscattering technique for the remote measurement of subsurface temperature and salinity. Volume 1: Review
[AD-A160095] N86-18940
Review of the Raman backscattering technique for the remote measurement of subsurface temperature and salinity: Volume 1
[AD-A160466] N86-18945

SALMONELLA
Immunomodulation by proteins of bordetella pertussis
[AD-A160078] N86-18953

SALTS
Development of a sanded expansive salt grout for repository sealing application
[AD-A160431] N86-18552

SAMPLING
Development and design of an advanced directional shear
[AD-A159647] N86-18751

SAN ANDREAS FAULT
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810

SANDSTONES
Nonlinear wave propagation study
[AD-A160179] N86-18879

SANDWICH STRUCTURES
Fire-retardant decorative inks for aircraft interiors
[NASA-TM-88198] N86-18441

SATELLITE ANTENNAS
Bit error rate testing of a proof-of-concept model baseband processor
[NASA-TM-87206] N86-18343
Computation of the radiation characteristics of a generalized phased array
[NASA-TM-87185] N86-18586

SATELLITE DESIGN
The present status of the HIPPARCOS project N86-18389

SATELLITE IMAGERY
Use of satellite images in the design of a standard meteorological station network N86-18356
Satellite remote sensing in hydrology N86-18358
Different problems of space stereoscopic observation N86-18378
Remote sensing and archaeological research in Thessaly, Greece. New prospects in archaeological landscape N86-18380
Snow mapping from LANDSAT imagery N86-18381
Long linear features observed on the Alpine orogen and their comparison with some geophysical data — landsat satellites N86-18382
Geometric rectification and photogrammetric reconstruction of SPOT images N86-18384
Convective cloud climatologies constructed from satellite imagery
[AD-A159969] N86-18914

SATELLITE NAVIGATION SYSTEMS
Monitoring of GPS (Global Positioning System) system performance
[PB85-242960] N86-18315

SATELLITE ORBITS
The role of service areas in the optimization of FSS orbital and frequency assignments
[NASA-CR-176488] N86-18341
CRRES/SPACERAD (combined release and radiation effects satellite/space radiation effects program) experiment descriptions
[AD-A160504] N86-18350

SATELLITE SOUNDING
The Seventh ESA Symposium on European Rocket and Balloon Programs and Related Research
[ESA-SP-229] N86-18811
Scattering of electrons in the equatorial plane during a pulsating aurora N86-18828
Use of satellite data to monitor high-altitude winds N86-18845
Plasma variations at the dayside magnetopause N86-18858
Satellite measurements of stratosphere constituents in the trace state N86-18875

SATELLITE TRACKING
The ERS-1 altimeter tracker performance simulation N86-18387
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881

SATELLITE-BORNE INSTRUMENTS
Geophysical radar altimeters for the 1990's — satellite-borne N86-18375
The VARAN-S: An airborne synthetic aperture radar for research in microwave remote sensing N86-18376
Techniques for achieving wide swath coverage with spaceborne SAR systems N86-18377

SCALE
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696

SCALING LAWS
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160185] N86-19120
If you like low P/sub T/ multiparticle physics, you'll love nucleus-nucleus interactions or Do E/sub T/ distributions obey KNO scaling in high energy pp and nucleus-nucleus collisions
[DE86-000633] N86-19186

SCANNING
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
Scan line difference compression algorithm simulation study
[AD-A160846] N86-19036

SCATTERING FUNCTIONS
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
Plane wave scattering by thin linear dielectric-coated wires and dielectric strips: A moment method approach with physical basis functions N86-18581

SCHOOLS
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-19801

SCHOTTKY DIODES
Schottky barrier infrared detector and process
[AD-D011925] N86-18607
Hybrid Schottky infrared focal plane array
[AD-D011934] N86-18686

SCINTILLATION
Acoustic scintillation liquid flow measurement
[PB85-243608] N86-18707

SCORING
A comparison of dichotic listening task scoring methods
[AD-A159920] N86-18980
SCRUBBERS
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] N86-18989
SEA ICE
Electromagnetic measurements of multi-year sea ice using impulse radar
[AD-A160737] N86-18598
Active and passive remote sensing of ice
[AD-A160075] N86-18939
SEA LAUNCHING
Analog inclination data system
[AD-D011940] N86-18688
SEA TRUTH
A semiempirical model for Doppler spectral features of microwave radar sea scatter
[AD-A160576] N86-18946
SEA WATER
Temporal stability of oxidizer solutions: A survey of candidate decon materials in seawater
[AD-A159734] N86-18457
SEALERS
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559
The effect of barrier coatings on the cure rate and fluid resistance of polysulphide sealants
[AD-A160728] N86-18561
SEALING
Development of a sanded expansive salt grout for repository sealing application
[AD-A160431] N86-18552
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559
SEALS (STOPPERS)
Effects of two-phase flow in shaft seals N86-18727
SEAMS (JOINTS)
Influence of chemical composition of flux on ductility of seam metal in electroslag welding N86-18544
SEAT BELTS
General aviation crashworthiness project, phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[NTSB/SR-85/02] N86-18306
Testing of steel 03Kh11N10M2T1-VD for springs of inertia safety belts
[BLL-M-36464-(5828.4)] N86-18482
SECONDARY FLOW
Axial compressor reversed flow performance
[AD-A160773] N86-18327
SECRETIONS
Review of duodenal and gastric ulcer
[AD-A160919] N86-18977
SEDATIVES
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972
SEDIMENT TRANSPORT
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
SEDIMENTS
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938
SEISMIC ENERGY
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810
SEISMIC WAVES
Calculation of source and structure parameters at regional and teleseismic distances
[AD-A160138] N86-18878
SEISMOGRAMS
Generation of vertically incident seismograms
[AD-A159695] N86-18876
SEISMOLOGY
CSDP: The seismology of continental thermal regimes
[DE86-000214] N86-18887
Central American climatology
[AD-A159989] N86-18915
A study to determine the merit of ocean borehole systems for acoustic detection
[AD-A160149] N86-19133
Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars
[NASA-CR-176470] N86-19275
Comments on techniques for spectral deconvolution N86-19278
SELECTION
Selection of stars in open clusters for the HIPPARCOS mission N86-18411
SELENIUM
Subsurface transport of contaminants from energy process waste leachates
[DE86-001225] N86-18805
SEMANTICS
The intelligibility of non-vocoded and vocoded semantically anomalous sentences
[AD-A160401] N86-18313
FRED: A program development tool
[DE86-000857] N86-19043
SEMICONDUCTOR DEVICES
Microwave semiconductor research - materials, devices and circuits
[AD-A160581] N86-18624
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
SEMICONDUCTOR DIODES
Schottky barrier infrared detector and process
[AD-D011925] N86-18607
SEMICONDUCTOR JUNCTIONS
Status of the light-induced effect in amorphous silicon material and in a-Si solar cells
[DE85-016857] N86-18790
SEMICONDUCTOR LASERS
Zinc-diffused narrow stripe AlGaAs/GaAs double heterostructure laser
[AD-D011943] N86-18709
SEMICONDUCTOR PLASMAS
Laser physics and laser techniques
[AD-A160143] N86-18714
SEMICONDUCTORS (MATERIALS)
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618
The effect of bulk traps on the InP (Indium Phosphide) accumulation type MISFET (Metal-Insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622
Microwave semiconductor research - materials, devices and circuits
[AD-A160581] N86-18624
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
GaP/Al/sub x/Ga/sub 1-x/P heterojunction semiconductor controlled rectifier for high-temperature electronic applications
[DE86-000204] N86-18641
Spectroscopic diagnostics to support advanced microelectronic fabrication techniques
[AD-A160192] N86-18717
SENSITIVITY
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
Automating sensitivity analysis of computer models using computer calculus
[DE85-018095] N86-19039
SENSORY DISCRIMINATION
Speech recognition: Acoustic, phonetic and lexical
[AD-A160008] N86-18589
SEQUENCING
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] N86-18956
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
SERIES (MATHEMATICS)
Demonstration of a Jacobi polynomial representation of a Kronecker delta function
[AD-A160460] N86-18673
SERVICE LIFE
Interactive effects of high- and low-frequency loading on fatigue
[AD-A160601] N86-18318
Testing of steel 03Kh11N10M2T1-VD for springs of inertia safety belts
[BLL-M-36464-(5828.4)] N86-18482
SERVOMECHANISMS
Servo operated anti-G suit pressurization system
[AD-D011932] N86-18988
SHAFTS (MACHINE ELEMENTS)
Effects of two-phase flow in shaft seals N86-18727
SHALLOW WATER
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
SHAPES
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
Computing visible-surface representations
[AD-A160602] N86-19085
SHEAR PROPERTIES
Development and design of an advanced directional shear
[AD-A159647] N86-18751
SHEAR STRESS
Buckling of thin-walled unstiffened circular cylinders under torsion and pressure
[ESDU-84012] N86-18746
SHELLFISH
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
SHELLS (STRUCTURAL FORMS)
Memoirs of the Faculty of Engineering, Hokkaido University, volume 16, no. 4(no. 73)
[ISSN-0368-9379] N86-18575
Collocation method for static and dynamic analysis of shells of revolution N86-18576
SHIELDING
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938
SHIP TERMINALS
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18938
SHIPS
USSR report: Transportation
[JPRS-UTR-85-015] N86-18323
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941
SHOCK MEASURING INSTRUMENTS
Operation Manual CORRTEX 3 Recorder
[DE85-014872] N86-19004
SHOCK WAVE ATTENUATION
Matched asymptotic expansions to similarity solutions of shock diffraction
[NASA-CR-178022] N86-18649
SHOCK WAVE PROPAGATION
Adaptive gridding in two dimensions for optimal accuracy and efficiency
[AD-A159943] N86-18670
Operation Manual CORRTEX 3 Recorder
[DE85-014872] N86-19004
SHOCK WAVES
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
Reflected impulse near spherical charges
[AD-A160797] N86-18572
The effect of surface conditions on the Mach reflection phenomenon
[AD-A160535] N86-18675
Laser interferometer measurements of refractive index in shock-compressed materials
[DE85-015505] N86-18678
High strain rate approx.10(5)/s response of 304 stainless steel at various strains
[DE86-000795] N86-18762
SHOT PEENING
Surface stress modification for repair of stress-relieved carbon steel fabrications
[DE86-000563] N86-18507
SHROUDED NOZZLES
Performance characteristics of an isolated coannular plug nozzle at transonic speeds
[NASA-TM-87606] N86-18292
SHUTTERS
Spectrally selective shutter mechanism
[AD-A160619] N86-19194
SHUTTLE PALLET SATELLITES
Spacelab special: EURECA N86-18437
SIGNAL ANALYSIS
Reconstruction of multidimensional signals from zero crossings
[AD-A160062] N86-18615

SIGNAL DETECTION
Theoretical studies and data analysis of wave propagation in random media
[AD-A160150] N86-18591
On the optimality of data processors for signal detection over a class of contaminated noises
[AD-A160213] N86-18617
A study to determine the merit of ocean borehole systems for acoustic detection
[AD-A160149] N86-19133
SIGNAL DETECTORS
Frequency domain non-linear signal processing apparatus and method for discrimination against non-Gaussian interference
[AD-D011931] N86-18584
SIGNAL FADING
Theoretical studies and data analysis of wave propagation in random media
[AD-A160150] N86-18591
SIGNAL MEASUREMENT
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699
SIGNAL PROCESSING
Frequency domain non-linear signal processing apparatus and method for discrimination against non-Gaussian interference
[AD-D011931] N86-18584
Reconstruction of multidimensional signals from zero crossings
[AD-A160062] N86-18615
In-flight turbulence detection
[AD-A160380] N86-18923
Digital signal processing
[AD-A159689] N86-18994
Markov processes applied to control, replacement and signal analysis
[AD-A160236] N86-19106
Polychromatic time-integrating optical processor for high-speed ambiguity processing
[AD-D011942] N86-19190
SIGNAL TO NOISE RATIOS
Frequency domain non-linear signal processing apparatus and method for discrimination against non-Gaussian interference
[AD-D011931] N86-18584
Spectrally selective shutter mechanism
[AD-A160619] N86-19194
SILICA GEL
Small angle neutron scattering data on cements with pozzolanic additives
[AERE-R-11609] N86-19162
SILICATES
Small angle neutron scattering data on cements with pozzolanic additives
[AERE-R-11609] N86-19162
SILICON
Effects of arsenic doping on the solidification dynamics of pulsed laser melted silicon
[DE85-006107] N86-18564
Schottky barrier infrared detector and process
[AD-D011925] N86-18607
Electrical method of making conductive paths in silicon
[AD-D011945] N86-18610
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697
Research progress in the DOE/SERI Amorphous Silicon Research Project
[DE85-006796] N86-18786
Amorphous silicon conceptual module design and cost estimate
[DE85-012177] N86-18787
Optical functions of silicon at elevated temperatures determined by polarization modulation ellipsometry
[DE86-001427] N86-19201
Effect of hydrostatic pressure on defect annealing in semiconductors
[DE85-015149] N86-19235
SILICON ALLOYS
Influence of elastic-stress state created by coatings on the magnetic properties of the alloy Fe-3 percent Si
N86-18532
SILICON CARBIDES
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
SILICON NITRIDES
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Antireflection coatings for planar silicon solar cells
[DE86-001428] N86-18794
SILICON OXIDES
Antireflection coatings for planar silicon solar cells
[DE86-001428] N86-18794
SILVER
Surface enhancement factors for Raman scattering at silver electrodes. Role of adsorbate-surface interactions and electronic structure
[AD-A160120] N86-18465
The benefits of recycling silver: A precious metal
[AD-A160895] N86-18501
Silver/glass mirrors for solar thermal systems
[DE85-000537] N86-18785
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160
Investigation of the spatially anisotropic component of the laterally averaged molecular Hydrogen/Ag(111) physisorption potential
[AD-A159726] N86-19228
SILVER CHLORIDES
Ag/AgCl reference electrode in thionyl chloride electrolytes
[DE85-016221] N86-18633
SIMILARITY THEOREM
Matched asymptotic expansions to similarity solutions of shock diffraction
[NASA-CR-178022] N86-18649
SIMULATION
Axial compressor reversed flow performance
[AD-A160773] N86-18327
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449
Particle-in-cell simulations of the lasertron
[DE85-012698] N86-18723
Active and passive remote sensing of ice
[AD-A160075] N86-18939
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] N86-18949
Conceptual design of a data base for numerical simulator
[NAL-TR-869] N86-19047
Star field simulator
[NASA-CR-178612] N86-19268
SINE WAVES
Comparison of two MTF measurement methods: Sine-wave versus edge gradient analysis
[AD-A160800] N86-18700
Analysis of a digital technique for frequency transposition of speech
[AD-A160632] N86-19137
SINGLE CRYSTALS
Effect of graphite cocrystallization growth of diamond single crystals in metal-carbon system N86-18536
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
SINGULARITY (MATHEMATICS)
Three-dimensional stress singularities in anisotropic materials and composites
[AD-A160433] N86-18452
SINTERING
Deformation of Al-Cu powder bodies during liquid-phase sintering N86-18538
SITE SELECTION
Use of satellite images in the design of a standard meteorological station network N86-18356
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
Southeastern Regional geologic characterization report: Volume 1
[DE86-000409] N86-18886
Geologic and hydrologic characterization and evaluation of the basin and range province relative to disposal of high-level radioactive waste. Part 3: Geologic and hydrologic evaluation
[TI85-901876] N86-19168
Evaluation of geologic and geophysical techniques for surface-to-subsurface projections of geologic characteristics in crystalline rock
[DE86-000221] N86-19172
Development of technology for the design of shallow land burial facilities at arid sites
[DE86-000759] N86-19173
Status of corrective measures technology for shallow land burial at arid sites
[DE86-000760] N86-19174
Technical advisory on SSC site criteria and catalog of site information needs
[DE86-000218] N86-19223
SKY BRIGHTNESS
Correction of veiling glare in HIPPARCOS observations N86-18409
SLEEP
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972
SLEEP DEPRIVATION
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982
SMOKE
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797
SNOW COVER
Snow mapping from LANDSAT imagery N86-18381
Active and passive remote sensing of ice
[AD-A160075] N86-18939
SOBOLEV SPACE
On the Boltzmann equation in unbounded space far from equilibrium and the limit of zero mean free path
[CTH-MATH-1985-16] N86-19244
SOCIAL FACTORS
Information technologies and social transformation
[PB85-240521] N86-19263
SOCIOLOGY
Why bother with experiments?
[AD-A160634] N86-19248
SODIUM
The sodium layer above Andoya, Norway, as observed by lidar from January through April 1984 N86-18857
SODIUM SULFUR BATTERIES
Degradation of beta" alumina electrolytes
[DE85-015300] N86-18636
SOFTWARE ENGINEERING
Quantitative evaluation of software methodology
[NASA-CR-176522] N86-19022
A performance measurement methodology for software multiple-backend database systems
[AD-A160284] N86-19026
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057
Entity-based data base management systems
N86-19253
SOFTWARE TOOLS
Debugging in a parallel environment
[DE85-010775] N86-19040
SOIL MAPPING
Evaporation in deserts: Physical aspects and remote sensing techniques N86-18367
SOIL MOISTURE
Evaporation in deserts: Physical aspects and remote sensing techniques N86-18367
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
SOILS
Development and design of an advanced directional shear
[AD-A159647] N86-18751
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797
Subsurface transport of contaminants from energy process waste leachates
[DE86-001225] N86-18805
SOLAR ACTIVITY
Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars
[NASA-CR-176470] N86-19275
Observations of low-degree P-mode oscillations in 1984 N86-19277
SOLAR ACTIVITY EFFECTS
Geomagnetic activity and solar cycle N86-18859
SOLAR ARRAYS
SOLERAS: Photovoltaic Power Systems Project. Rural solar applications, project summary
[DE86-001260] N86-18793

SOLAR ATMOSPHERE
Solar physics from space N86-18832
Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars
[NASA-CR-176470] N86-19275
Observations of low-degree P-mode oscillations in 1984 N86-19277
SOLAR CELLS
Cadmium zinc sulfide/copper indium diselenide module design and cost assessment
[DE85-016854] N86-18509
Publications of the JPB Solar Thermal Power Systems Project 1976 through 1985
[NASA-CR-176533] N86-18777
Solar Simulation Laboratory description and manual
[AD-A159729] N86-18778
Status of the light-induced effect in amorphous silicon material and in a-Si solar cells
[DE85-016857] N86-18790
Antireflection coatings for planar silicon solar cells
[DE86-001428] N86-18794
SOLAR COLLECTORS
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 2
[DE86-001119] N86-18792
SOLAR CORONA
The energy balance in the solar chromosphere-corona transition zone N86-18833
Solar coronal holes observed with the Nancay (France) meter radioheliograph N86-18869
SOLAR ENERGY
Solar Simulation Laboratory description and manual
[AD-A159729] N86-18778
SOLAR ENERGY CONVERSION
Publications of the JPB Solar Thermal Power Systems Project 1976 through 1985
[NASA-CR-176533] N86-18777
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 3
[DE86-001120] N86-18789
SOLAR FLARES
Forecasting solar flares and geomagnetic storms at Meudon (France) N86-18870
The hard X-ray burst spectrometer event listing, 1980 - 1985
[NASA-TM-86236] N86-19279
SOLAR GENERATORS
Publications of the JPB Solar Thermal Power Systems Project 1976 through 1985
[NASA-CR-176533] N86-18777
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 2
[DE86-001119] N86-18792
SOLAR MAGNETIC FIELD
Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars
[NASA-CR-176470] N86-19275
The detection of global convective wave flows on the Sun N86-19276
SOLAR OSCILLATIONS
Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars
[NASA-CR-176470] N86-19275
Observations of low-degree P-mode oscillations in 1984 N86-19277
SOLAR PHYSICS
Solar physics from space N86-18832
The energy balance in the solar chromosphere-corona transition zone N86-18833
SOLAR RADIATION
Application of solar max ACRIM data to analyze solar-driven climatic variability on Earth
[NASA-CR-176483] N86-18890
SOLAR REFLECTORS
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
Molten Salt Electric Experiment (MSEE): Phase 1 report. Volume 3
[DE86-001120] N86-18789
SOLAR SIMULATORS
Solar Simulation Laboratory description and manual
[AD-A159729] N86-18778
SOLAR TERRESTRIAL INTERACTIONS
Generation of electrons following ion release in the solar wind N86-18843
Geomagnetic activity and solar cycle N86-18859
SOLAR WIND
Energization of electrons following ion release in the solar wind N86-18843
SOLID ELECTROLYTES
Polyphosphazenes with etheric side groups: Prospective biomedical and solid electrolyte polymers
[AD-A160549] N86-18556
Degradation of beta" alumina electrolytes
[DE85-015300] N86-18636
Polymer electrolyte based on poly(ethylene imine) and lithium salts
[AD-A160381] N86-18779
SOLID LUBRICANTS
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
SOLID PROPELLANT ROCKET ENGINES
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571
SOLID SURFACES
Active control of compressible flows on a curved surface
[NASA-CR-178018] N86-18648
SOLID-SOLID INTERFACES
Thermal conductance of metallic interface in vacuum
[DE85-017860] N86-18680
SOLIDS
Effect of ion implantation on subsequent erosion and wear behavior of solids
[DE86-000088] N86-18506
Theory for dynamic compaction of wet porous solids
[DE85-017596] N86-18578
Thermoelastic-plastic flow in solids
[DE86-001230] N86-18761
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19108
SOLITARY WAVES
Photogeneration of confined soliton pairs (Bipolarons) in polythiophene
[AD-A160157] N86-18616
SOLUBILITY
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976
SOLUTES
Subsurface transport of contaminants from energy process waste leachates
[DE86-001225] N86-18805
SOLUTIONS
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
SOLVENT EXTRACTION
Dual mechanism bifunctional polymers for the complexation of lanthanides and actinides
[DE86-000094] N86-18565
SOLVENTS
Polymer electrolyte based on poly(ethylene imine) and lithium salts
[AD-A160381] N86-18779
SONAR
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] N86-18981
Multimodal versus unimodal information processing of words
[AD-A160517] N86-18984
An analysis of stimulus determinants of target detection in PBB (Passive broadband) displays
[AD-A160203] N86-19134
Optical interarray processing
[AD-A160256] N86-19192
SOOT
Emission characterization of a 2-stroke heavy-duty diesel coach engine and vehicle with and without a particulate trap
[PB85-239770] N86-18742
SORGHUM
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
SOUND AMPLIFICATION
Study of optical sound generation and amplification
[AD-A160758] N86-19196
SOUND GENERATORS
Multiple beamforming
[AD-A159979] N86-19132
Generation of underwater sound by a moving high-power laser source
[AD-A160900] N86-19138
SOUND PRESSURE
Microbending fiber optic acoustic sensor
[AD-D011938] N86-19124
SOUND PROPAGATION
Study of optical sound generation and amplification
[AD-A160758] N86-19196
SOUND TRANSMISSION
Sound transmission into shells doubly excited by incident waves and by arbitrary surface forcing functions
[AD-A159936] N86-19131
SOUND WAVES
Sound transmission into shells doubly excited by incident waves and by arbitrary surface forcing functions
[AD-A159936] N86-19131
Effects of inflow conditions on discrete frequency noise generated by small, axial flow fans
[AD-A160579] N86-19135
SOUNDING ROCKETS
Materials science research in rockets, especially in the fields of fluid physics and of metallic dispersions N86-18835
Crystal growth furnace developed for floating zone experiments in sounding rockets N86-18836
The S19 guided sounding rocket S38 Trigger Optimized Repetition (TOR) N86-18841
Extending the capabilities of sounding rocket class experiments N86-18860
Two generations of microcomputer-based program units for sounding rocket attitude control systems N86-18865
High-Altitude Recovery Program (HARP) — sounding rocket payloads N86-18866
The Saab spinning rocket attitude control (SPINRAC): An attitude control system for obtaining low impact dispersion N86-18863
SOUTHERN CALIFORNIA
Dislocation model for aseismic fault slip in the transverse ranges of Southern California
[NASA-CR-176493] N86-18810
SOUTHERN HEMISPHERE
The status of the SRS — Southern Reference Stars (SRS) HIPPARCOS N86-18423
SOYBEANS
Characterization of vegetation by microwave and optical remote sensing
[E86-10012] N86-18766
SPACE CHARGE
Real time: Automatic vehicle potential determination from ESA measurements. Part 1. The count ratio algorithm
[AD-A160459] N86-18435
The effect of bulk traps on the InP (Indium Phosphide) accumulation type MISFET (Metal-Insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622
Particle-in-cell simulations of the lasertron
[DE85-012698] N86-18723
SPACE COMMERCIALIZATION
Accommodation requirements for microgravity science and applications research on space station
[NASA-CR-175038] N86-18334
SPACE COMMUNICATION
An analysis of bi-directional use of frequencies for satellite communications
[NASA-TM-87226] N86-18565
SPACE COOLING (BUILDINGS)
Evaluation of advanced design concepts for absorption heat pumps
[DE85-005090] N86-18780
Dual-stroke heat pump field performance
[DE85-005247] N86-18783
SPACE ENVIRONMENT SIMULATION
Laboratory simulation of the electrodynamic interaction of the tethered satellite with the ionosphere N86-18844
SPACE ERECTABLE STRUCTURES
Telescoping space station modules
[NASA-TM-86253] N86-18340
SPACE EXPLORATION
Planetary image conversion task
[NASA-CR-176534] N86-19267
SPACE FLIGHT
Active Magnetospheric Particle Tracer Explorers (AMPTE) Ion Release Module (IRM): Flight experience after 7 year mission
[MPI-IN-45] N86-18438
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] N86-18949
The beginnings of airborne weightlessness research
[AD-A160575] N86-18966
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975
SPACE HEATING (BUILDINGS)
Evaluation of advanced design concepts for absorption heat pumps
[DE85-005090] N86-18780
Dual-stroke heat pump field performance
[DE85-005247] N86-18783

SPACE LABORATORIES
Spacelab special: STS 51-F/SL-2 N86-18436
SPACE MANUFACTURING
Accommodation requirements for microgravity science and applications research on space station [NASA-CR-175038] N86-18334
SPACE MISSIONS
Active Magnetospheric Particle Tracer Explorers (AMPTE) Ion Release Module (IRM): Flight experience after 7 year mission [MPI-IN-45] N86-18438
SPACE OBSERVATIONS (FROM EARTH)
New ground-based photometric observations — HIPPARCOS calibrations N86-18407
Complementary astrometric observations of minor planets at Barcelona — HIPPARCOS N86-18417
SPACE PLASMAS
The tethered satellite system project N86-18842
Laboratory simulation of the electrodynamic interaction of the tethered satellite with the ionosphere N86-18844
Plasma variations at the dayside magnetopause N86-18858
Dispersion surfaces and ion wave instabilities in space plasmas [KGI-PREPRINT-190] N86-19206
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone [KGI-PREPRINT-081] N86-19208
SPACE POWER REACTORS
SP-100 low mass shield design [DE86-000787] N86-18791
Heat pipe space nuclear reactor design assessment. Volume 1: Design status of the SP-100 heat pipe space nuclear reactor system [AD-A160270] N86-19164
Heat pipe space nuclear reactor design assessment. Volume 2: Feasibility study of upgrading the SP-100 heat pipe space nuclear power system [AD-A160280] N86-19165
SPACE PROCESSING APPLICATIONS ROCKET
Accommodation requirements for microgravity science and applications research on space station [NASA-CR-175038] N86-18334
SPACE SHUTTLE MISSION 41-A
Outstanding results from one year's activities of the ESA Metric Camera Working Group N86-18359
SPACE SHUTTLE PAYLOADS
The Modular Optoelectronic Multispectral Scanner (MOMS) missions and geoscientific results N86-18364
Extending the capabilities of sounding rocket class experiments N86-18860
SPACE SHUTTLES
Analysis of heat-transfer measurements from two AEDC wind tunnels on the shuttle external tank [AD-A160406] N86-18331
Telescoping space station modules [NASA-TM-86253] N86-18340
SPACE STATIONS
Accommodation requirements for microgravity science and applications research on space station [NASA-CR-175038] N86-18334
Telescoping space station modules [NASA-TM-86253] N86-18340
Astro-array: A space-based, coherent radio interferometer array [AD-A160763] N86-18344
An analytical investigation of a conceptual design for the station transverse boom rotary joint structure [NASA-TM-87665] N86-18347
Space station common module power system network topology and hardware development [NASA-CR-178587] N86-18348
Spacelab special: STS 51-F/SL-2 N86-18436
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel [NASA-CR-176523] N86-18990
SPACE TRANSPORTATION SYSTEM
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB [AD-A160561] N86-18339
SPACEBORNE ASTRONOMY
The HIPPARCOS data reductions: Principles and limitations N86-18391
Expected fulfillments of observation proposals versus ESA priority — HIPPARCOS N86-18400
Astrophysical aspects of the contents of the Input Catalog — HIPPARCOS N86-18401
Optimizing the observing strategy through simulations — HIPPARCOS N86-18403
Correction of veiling glare in HIPPARCOS observations N86-18409
Solar physics from space N86-18832
SPACEBORNE EXPERIMENTS
The tethered satellite system project N86-18842
SPACEBORNE PHOTOGRAPHY
Outstanding results from one year's activities of the ESA Metric Camera Working Group N86-18359
Aerotriangulation with Spacelab Metric Camera images N86-18360
Line map production with Metric Camera data N86-18361
Use of Metric Camera for landscape units: Description and mapping N86-18362
Analysis of the Metric Camera MC-BW for land use classification and land use hazard management (thematic mapping of Metric Camera Spacelab black and white photographs) N86-18363
SPACEBORNE TELESCOPES
Performances of HIPPARCOS optical telescope N86-18390
SPACECRAFT CHARGING
Flight model discharge system [AD-A160434] N86-18349
SPACECRAFT COMMUNICATION
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links [NASA-CR-176532] N86-18342
Bit error rate testing of a proof-of-concept model baseband processor [NASA-TM-87206] N86-18343
SPACECRAFT CONTAMINATION
Molecular back flow from the exhaust plume of a space-based laser [AD-A159998] N86-18712
SPACECRAFT DESIGN
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel [NASA-CR-176523] N86-18990
SPACECRAFT DOCKING
Telescoping space station modules [NASA-TM-86253] N86-18340
SPACECRAFT ENVIRONMENTS
Accommodation requirements for microgravity science and applications research on space station [NASA-CR-175038] N86-18334
CRRES/SPACERAD (combined release and radiation effects satellite/space radiation effects program) experiment descriptions [AD-A160504] N86-18350
SPACECRAFT INSTRUMENTS
Real time: Automatic vehicle potential determination from ESA measurements. Part 1. The count ratio algorithm [AD-A160459] N86-18435
SPACECRAFT MODELS
Flight model discharge system [AD-A160434] N86-18349
New polymeric materials expected to have superior properties for space-based use [AD-A160285] N86-18550
SPACECRAFT PERFORMANCE
The OTS: Sixth year in orbit N86-18345
The OTS: Seventh year in orbit N86-18346
SPACECRAFT POWER SUPPLIES
Space station common module power system network topology and hardware development [NASA-CR-178587] N86-18348
Overview of free-piston Stirling SP-100 activities at the NASA Lewis Research Center [NASA-TM-87224] N86-19264
SPACECRAFT PROPULSION
Antiproton annihilation propulsion [AD-A160734] N86-18440
SPACECRAFT TRACKING
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links [NASA-CR-176532] N86-18342
SPACELAB PAYLOADS
Outstanding results from one year's activities of the ESA Metric Camera Working Group N86-18359
Line map production with Metric Camera data N86-18361
Use of Metric Camera for landscape units: Description and mapping N86-18362
Analysis of the Metric Camera MC-BW for land use classification and land use hazard management (thematic mapping of Metric Camera Spacelab black and white photographs) N86-18363
Spacelab special: STS 51-F/SL-2 N86-18436
First German Spacelab missions, no. 6 N86-18979
SPATIAL DISTRIBUTION
Eye movements and spatial pattern vision [AD-A160408] N86-18963
SPATIAL RESOLUTION
Evaluation of ion microscopic spatial resolution and image quality [AD-A160155] N86-18693
Developments in gas detectors for synchrotron X-ray radiation [DE86-001207] N86-18705
Eye movements and spatial pattern vision [AD-A160408] N86-18963
SPECIFIC HEAT
Thermal and mechanical properties of calcium lanthanum sulfide [AD-A160611] N86-18470
SPECIFICATIONS
Welding procedure specification: Machine gas metal arc welding of carbon steel [DE86-001492] N86-18763
Welding procedure specification: Gas tungsten arc welding of aluminum alloys 1XXX and 3003 [DE86-001508] N86-18764
Welding procedure specification: Gas tungsten arc welding of nickel-chromium-iron and nickel-chromium-molybdenum [DE86-001517] N86-18765
SPECTRA
Computational fluid dynamics, volume 2 — conference [VKI-LS-1985-04-VOL-2] N86-18660
Theory of spectral methods N86-18662
Application of spectral methods to compressible and incompressible fluid dynamics N86-18663
The concept of information in scientific computing — spectral approximation N86-18664
Nonlinear parametric wave model compared with field data [AD-A160004] N86-18937
SPECTRAL BANDS
Molecular transmission band models for the uniformly mixed and the trace gases [AD-A160442] N86-18466
Proceedings of the 40th Symposium on Molecular Spectroscopy [AD-A160415] N86-19149
SPECTRAL REFLECTANCE
Silver/glass mirrors for solar thermal systems [DE85-000537] N86-18785
SPECTRAL RESOLUTION
Comments on techniques for spectral deconvolution N86-19278
SPECTROHELIOGRAPHS
Solar coronal holes observed with the Nancay (France) meter radioheliograph N86-18869
SPECTROMETERS
Triply differential studies of atomic and molecular photoionization using synchrotron radiation [AD-A160587] N86-19150
SPECTROPHOTOMETERS
Fluorescence spectrophotometers [DE85-010686] N86-18703
SPECTROSCOPY
Complex molecular motions in bulk hard segment polyurethanes: A deuterium NMR study [AD-A159760] N86-18459
Spectroscopy of metal/titania systems [AD-A160698] N86-18499
Evaluation of ion microscopic spatial resolution and image quality [AD-A160155] N86-18693
Laser pumped frequency standards [AD-A160606] N86-18720
Quantum theory of multiwave mixing N86-19241
SPECTRUM ANALYSIS
Picogram FT-IR: Ultramicrosampling and GC-IR [DE85-016440] N86-18474
Development of a system to measure the response time of microwave survey instruments to rotating radar antenna patterns [PB85-230217] N86-18605
Laser induced fluorescence of trapped molecular ions [DE85-016898] N86-18726
Spectral characteristics of positive ion-current fluctuations measured by ion probes — polar atmosphere N86-18853
Representation of topography in spectral models [AD-A159917] N86-18877
A semiempirical model for Doppler spectral features of microwave radar sea scatter [AD-A160576] N86-18946
Experimental studies in molecular fragmentation: Processes, energetics and diagnostics [AD-A160745] N86-19152
The last hurrah for quarkonium physics: The top system [DE85-012304] N86-19157
The use of electron beam position modulation in auger depth profile analysis [AD-A159712] N86-19163
The absolute fluxes of six hot stars in the ultraviolet (912 - 1600 angstroms) N86-19269

SPEECH
Effects of noise and workload on a communication task
[AD-A160743] N86-18599
Analysis of a digital technique for frequency transposition of speech
[AD-A160832] N86-19137
SPEECH RECOGNITION
The intelligibility of non-vocoded and vocoded semantically anomalous sentences
[AD-A160401] N86-18313
Speech recognition: Acoustic, phonetic and lexical
[AD-A160008] N86-18589
SPEED REGULATORS
Digital phase-locked loop speed control for a brushless dc motor
[AD-A159977] N86-18614
SPHERES
Laser damage to spherical targets
[AD-A159717] N86-18710
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734
SPHERICAL HARMONICS
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882
Computation of spherical harmonics and approximation by spherical harmonic expansions
[AD-A160445] N86-19083
SPHEROMAKS
Magnetohydrodynamic stability of spheromak plasma in spheroidal flux conserver: Application of Mercier criterion
[IPPJ-747] N86-19205
SPIN DYNAMICS
PNS (Parabolized Navier-Stokes) computations for spinning and fin-stabilized projectiles at supersonic velocities
[AD-A160393] N86-18337
SPIN GLASS
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182
SPIN STABILIZATION
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336
SPLINE FUNCTIONS
Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159883] N86-18768
SPLINES
On the solution of circulant linear systems
[AD-A159841] N86-19067
SPOILERS
The 737 graphite composite flight spoiler flight service evaluation
[NASA-CR-172600] N86-18448
SPOT (FRENCH SATELLITE)
Geometric rectification and photogrammetric reconstruction of SPOT images N86-18384
SPRINGS (ELASTIC)
Testing of steel 03Kh11N10M2T1-VD for springs of inertia safety belts
[BLL-M-36464-(5828.4)] N86-18482
SPUTTERING
The use of electron beam position modulation in auger depth profile analysis
[AD-A159712] N86-19163
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
STACKS
Phosphoric acid electric utility fuel cell technology development
[NASA-CR-176496] N86-18638
STAGNATION FLOW
Axial compressor reversed flow performance
[AD-A160773] N86-18327
STAGNATION POINT
Stagnation-point heat transfer from jet flames
[TI85-011376] N86-18676
STAINLESS STEELS
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Painting stainless steel with alternating current N86-18533
Fatigue behaviour of AISI 304 L stainless steel elements, butt welded by the electron beam process
[BLL-RISLEY-TR-5234-(9091.9F)] N86-18743
High strain rate approx.10(6)/s response of 304 stainlecs steel at various strains
[DE86-000795] N86-18762
STANDARDS
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563
Development of a video tape to test teleconferencing codecs
[AD-A160798] N86-18601
Life extension of components with high cumulative fatigue usage
[TI85-014631] N86-18758
Computing Services Writing and Editing Standards
[DE85-018547] N86-19257
STAR CLUSTERS
Selection of stars in open clusters for the HIPPARCOS mission N86-18411
The HIPPARCOS proper motions for open star clusters N86-18412
STAR DISTRIBUTION
Star field simulator
[NASA-CR-178612] N86-19268
STAR TRACKERS
Star field simulator
[NASA-CR-178612] N86-19268
STARS
The INCA data base: Sub-base from Set of Identifications, Measurements and Bibliography for Astronomical Data (SIMBAD) --- HIPPARCOS N86-18396
Existing data on candidate stars for the HIPPARCOS Input Catalog: Present status and developments N86-18404
STATE ESTIMATION
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086
STATIC DISCHARGERS
Antistatic packaging material and steel substrates packaged therewith
[AD-D011939] N86-18729
STATIC ELECTRICITY
Atmospheric electricity hazards threat environment definition
[AD-A159739] N86-18909
STATIC LOADS
Construction of non-linear model for binary metal-matrix composites
[AD-A159721] N86-18450
Effect of medium pH on hydrogen permeability of passivating films and rate of growth of corrosion cracks in 40KhN steel N86-18524
STATIC PRESSURE
Simulations: The role played by static pressures --- HIPPARCOS input catalog N86-18398
STATISTICAL ANALYSIS
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Theoretical studies and data analysis of wave propagation in random media
[AD-A160150] N86-18591
A statistical gravity model for northern Texas
[AD-A160474] N86-18883
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Hickam AFB, Hawaii
[AD-A159730] N86-18906
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
New measures of diversity
[AD-A160273] N86-19079
STATISTICAL DISTRIBUTIONS
Estimation of population proportion and of probabilities of misclassification from imperfect binomial data by comparison with results of a standard method of known imperfection
[AD-A159926] N86-19099
Statistical aspects of reliability, maintainability and availability
[AD-A160126] N86-19102
Weak limits of probability measures on metric Schauder spaces
[CTH-MATH-1985-17] N86-19119
STATISTICAL WEATHER FORECASTING
Aviation weather forecasts based on advection: Experiments using modified initial conditions and improved analyses
[AD-A160369] N86-18920
STEADY FLOW
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
STEADY STATE
Catalytic combustion of gas turbines: Process modelling and kinetic study of iso-octane oxidation N86-18326
Axial compressor reversed flow performance
[AD-A160773] N86-18327
Convergence to steady state of solutions of Burgers' equation
[NASA-CR-178017] N86-19064
STEAM
Low-cycle fatigue and crack resistance of boiler pipes and steam lines made of 12Kh1MF steel N86-18515
Open-cycle vapor compression heat pump
[PB85-222529] N86-18684
STEEL STRUCTURES
Effects of micro-alloying on the fatigue crack resistance of structural steel
[BLL-M-36488-(5828.4)] N86-18479
STEELS
The application of chromium carbide to the surface of iron and steels
[BLL-M-36489-(5828.4)] N86-18477
Prospects for developing a technology for producing corrosion resistant steel
[BLL-M-36460-(5828.4)] N86-18478
Structural changes in ferrite-austenite steel O3Kh26N6 during hot torsion
[BLL-M-36451-(5828.4F)] N86-18484
Microstructure and properties of selected high strength ferritic weld metals
[DE85-015107] N86-18502
Kinetics of deformation and damage accumulation in concentration zones upon nonisothermal low-cycle loading N86-18512
Low-cycle fatigue and crack resistance of boiler pipes and steam lines made of 12Kh1MF steel N86-18515
Effect of medium pH on hydrogen permeability of passivating films and rate of growth of corrosion cracks in 40KhN steel N86-18524
Effect of inhibitors on electrochemical conditions during tests of specimens of 40 Kh steel for static corrosion cracking resistance N86-18526
Irreplaceable metal N86-18530
Tribotechnical characteristics of ball bearing steel after chromizing N86-18531
Effect of prolonged high temperature aging on operating properties of 15Kh1M1F steel N86-18534
Influence of chemical composition of flux on ductility of seam metal in electroslag welding N86-18544
Antistatic packaging material and steel substrates packaged therewith
[AD-D011939] N86-18729
Comparisons between ultrasonic bulk shear wave velocities in textured steel with application to the measurement of residual stress
[AERE-R-11559] N86-19144
Neutron diffraction methods for the study of residual stress fields
[AERE-R-11630] N86-19240
STELLAR ATMOSPHERES
Excitation mechanisms in the atmospheres of yellow and red giant and supergiant stars N86-18834
STELLAR EVOLUTION
Supermassive star formation: The early phases N86-19270
STELLAR LUMINOSITY
Specific problems related to variability --- stellar luminosity; HIPPARCOS N86-18408
Star field simulator
[NASA-CR-178612] N86-19268
STELLAR MAGNITUDE
Definition of the survey --- HIPPARCOS Input Catalog N86-18397
STELLAR MASS ACCRETION
Supermassive star formation: The early phases N86-19270
STELLAR MASS EJECTION
The Cygnus loop supernova remnant: New observations and a framework for understanding its structure and evolution N86-19273
STELLAR MODELS
The absolute fluxes of six hot stars in the ultraviolet (912 - 1600 angstroms) N86-19269
STELLAR MOTIONS
Stars in the direction of the Magellanic Clouds --- HIPPARCOS N86-18410
The HIPPARCOS proper motions for open star clusters N86-19412
Astrometric data for nearby stars --- HIPPARCOS N86-18413
STELLAR OCCULTATION
Overview of TYCHO data analysis --- HIPPARCOS N86-18427

STELLAR PARALLAX
The HIPPARCOS data reductions: Principles and limitations N86-18391
Present status of the Input Catalog --- HIPPARCOS mission N86-18395
STELLAR RADIATION
Relating the HIPPARCOS reference frame to the radio reference frame via Very Large Array (VLA) measurements of the precise position of stellar radio emission N86-18431
STELLAR SPECTRA
Observability of spectroscopic double stars by HIPPARCOS N86-18415
Excitation mechanisms in the atmospheres of yellow and red giant and supergiant stars N86-18834
STELLAR SPECTROPHOTOMETRY
Photometric data related to the formation of the Input Catalog --- HIPPARCOS N86-18405
Standard stars for the on-orbit photometric payload calibration --- HIPPARCOS N86-18406
New ground-based photometric observations --- HIPPARCOS calibrations N86-18407
Radial velocity measurements of late-spectral-type stars --- HIPPARCOS N86-18425
Complementary photometric observations for HIPPARCOS N86-18426
STELLAR STRUCTURE
Milliarcsecond structures, VLBI and optical positions of 8 HIPPARCOS radio stars N86-18432
STEREOCHEMISTRY
Chemical applications of topology and group theory. Twenty 8-vertex polyhedra and their rearrangements
[AD-A160589] N86-18469
STEREOSCOPY
Different problems of space stereoscopic observation N86-18378
STIMULATED EMISSION
High-Frequency (HF) wave activity observed beam injector from a rocket-borne electron accelerator N86-18839
STIRLING CYCLE
Overview of free-piston Stirling SP-100 activities at the NASA Lewis Research Center
[NASA-TM-87224] N86-19264
Stirling powered van program overview
[NASA-TM-87227] N86-19265
STOCHASTIC PROCESSES
Reliability evaluation of fault-tolerant multiprocessor systems
[AD-A160234] N86-18996
Poisson-stability as a unifying factor for max-stability and sum-stability
[AD-A160132] N86-19070
A stochastic model for particle impingements on orbiting spacecraft
[NASA-TP-2550] N86-19095
Bounds on distributions arising in order restricted inference: The partially ordered case
[AD-A159872] N86-19098
A methodology for computation reduction for specially structured large scale Markov decision problems
[AD-A159950] N86-19100
Statistical aspects of reliability, maintainability and availability
[AD-A160126] N86-19102
Construction of exponential Martingales for counting processes
[AD-A160189] N86-19104
The amount of noise inherent in bandwidth selection for a kernel density estimator
[AD-A160235] N86-19107
Markov processes applied to control, replacement and signal analysis
[AD-A160238] N86-19108
SPADE (series parallel directed acyclic graph evaluator): A tool for performance and reliability evaluation, revision
[AD-A160289] N86-19113
Maximum entropy pole-zero estimation
[AD-A160655] N86-19116
STOICHIOMETRY
Graphite fiber intercalation: Basic properties of copper chloride intercalated fibers
[NASA-TM-87217] N86-18442
Preparation of P-N-H and p-p compounds from a silylated amino(methylene) phosphine
[AD-A159829] N86-18443
STORAGE RINGS (PARTICLE ACCELERATORS)
Magnet cable manufacturing
[DE86-000607] N86-18640
Partially coherent X-rays from modern storage rings
[DE85-011157] N86-18724
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171
Magnetic measurements on the ring dipoles and quadrupoles for the Los Alamos proton storage ring
[DE86-000785] N86-19175
STORAGE STABILITY
Temporal stability of oxidizer solutions: A survey of candidate decon materials in seawater
[AD-A159734] N86-18457
Temporal stability of solid oxidizers at high temperature and humidity
[AD-A159735] N86-18458
STRAIN RATE
High strain rate approx.10(6)/s response of 304 stainless steel at various strains
[DE86-000795] N86-18762
STRATEGY
Controlling production firing: The FCL language
[AD-A160423] N86-19028
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057
STRATIGRAPHY
Geologic structure of the surficial aquifer system underlying Everglades National Park and Big Cypress National Preserve
[PB85-247609] N86-18772
Development of performance assessment methodology for nuclear waste isolation in geologic media
[TI85-017813] N86-19167
STRATOSPHERE
Project MAP/Globus NOx: Coordinated observations of nitrogen oxides in the middle atmosphere N86-18847
Stratospheric water-vapor measurements on board long-duration balloons N86-18848
Comparison between ST radar and in situ balloon measurements --- atmospheric sounding N86-18849
Ozone and nitrogen oxides in the middle atmosphere: A three-dimensional model simulation --- high latitude N86-18850
Some aspects of the rapid spatiotemporal variations of stratospheric ozonity N86-18874
Study of large aerosol particles
[AD-A160379] N86-18880
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18884
STRATUS CLOUDS
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929
Calculation of ice accretion on cylindrical rods according to Bain's model, and comparison with experimental results --- stratus clouds
[DFVLR-FB-85-46] N86-18933
STRESS (PHYSIOLOGY)
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] N86-18965
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982
STRESS (PSYCHOLOGY)
An investigation into effects of environmental changes on locus of control
[AD-A160861] N86-18987
STRESS ANALYSIS
Elastic buckling of thin-walled unstiffened circular cylinders under bending, axial compression and internal pressure
[ESDU-84006] N86-18744
Finite element mesh for a complete solution of a problem with a singularity
[AD-A159890] N86-18754
STRESS CONCENTRATION
Influence of stress concentration on fatigue and corrosion-fatigue properties of VAL10 aluminum casting alloy and AK6 aluminum forging alloy N86-18513
Development and design of an advanced directional shear
[AD-A159647] N86-18751
STRESS CORROSION CRACKING
Surface stress modification for repair of stress-relieved carbon steel fabrications
[DE86-000563] N86-18507
Influence of stress concentration on fatigue and corrosion-fatigue properties of VAL10 aluminum casting alloy and AK6 aluminum forging alloy N86-18513
Effect of medium pH on hydrogen permeability of passivating films and rate of growth of corrosion cracks in 40KhN steel N86-18524
Characterization of acoustic emission signals generated by water flow through intergranular stress corrosion cracks
[TI85-014970] N86-19140
STRESS MEASUREMENT
Review of ultrasonic velocity methods of determining residual stress
[AD-A160769] N86-18756
STRESS RELIEVING
Surface stress modification for repair of stress-relieved carbon steel fabrications
[DE86-000563] N86-18507
STRESS TENSORS
Neutron diffraction methods for the study of residual stress fields
[AERE-R-11630] N86-19240
STRESS-STRAIN RELATIONSHIPS
Finite element mesh for a complete solution of a problem with a singularity
[AD-A159890] N86-18754
Nonlinear wave propagation study
[AD-A160179] N86-18879
STRESSES
Three-dimensional stress singularities in anisotropic materials and composites
[AD-A160433] N86-18452
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982
STRONTIUM TITANATES
Nonlinear materials for the millimeter spectral region
[AD-A159834] N86-18613
STRUCTURAL ANALYSIS
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB
[AD-A160561] N86-16339
Stressed-strained state of triple-layer honeycomb panels with carbon-plastic sheaths N86-18521
Summary of tower designs for large horizontal axis wind turbines
[NASA-TM-87166] N86-18776
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
STRUCTURAL ENGINEERING
Deflection in tapered cantilever beams deflection (gap opening) in double cantilever type fracture toughness specimens
[AD-A159887] N86-18753
STRUCTURAL FAILURE
Probabilistic evaluation of individual aircraft tracking techniques
[AD-A160146] N86-18312
Review of ultrasonic velocity methods of determining residual stress
[AD-A160769] N86-18756
STRUCTURAL MEMBERS
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
STRUCTURAL PROPERTIES (GEOLOGY)
Long linear features observed on the Alpine orogen and their comparison with some geophysical data --- landsat satellites N86-18382
Calculation of source and structure parameters at regional and teleseismic distances
[AD-A160138] N86-18878
Southeastern Regional geologic characterization report: Volume 1
[DE86-000409] N86-18886
STRUCTURAL STRAIN
Wind-excited behavior of structures 4 N86-18749
STRUCTURAL VIBRATION
Aseismic bash isolation N86-18748
Wind-excited behavior of structures 4 N86-18749
STUDENTS
The design and implementation of an operating system for the IBM personal computer
[AD-A160875] N86-19052
Structured exit interviews using MDS (Multidimensional scaling)
[AD-A160469] N86-19247
STYRENES
Viscosity rise during free radical crosslinking polymerization with inhibition
[AD-A159842] N86-18444
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560

SUBCRITICAL FLOW
Subsonic wall interference corrections for half-model tests using sparse wall pressure data
[LR-616] N86-18287
SUBDIVISIONS
Subdivision Froude number
[AD-A160486] N86-18674
SUBMERGED BODIES
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734
SUBMILLIMETER WAVES
The optical constants of smoke materials (naturally occurring minerals) plus iron and graphite in the millimeter and submillimeter
[AD-A160614] N86-18797
SUBROUTINES
A computer program to model the Cn2 optical turbulence characteristics of a given atmosphere, its conversion to IBM FORTRAN and utilization
[AD-A159762] N86-18911
Development of an accurate algorithm for EXP(Bt): Appendix
[AD-A160121] N86-19018
Fast Fourier Transform (FFT) subroutine for determining frequency response data for digital simulations
[AD-A160546] N86-19033
SUBSONIC FLOW
Effects of inflow conditions on discrete frequency noise generated by small, axial flow fans
[AD-A160579] N86-19135
SUBSONIC WIND TUNNELS
Development and application of dynamic simulations of a subsonic wind tunnel
[NASA-TM-87211] N86-18338
SUBSTRATES
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697
Antistatic packaging material and steel substrates packaged therewith
[AD-D011939] N86-18729
Amorphous silicon conceptual module design and c al estimate
[DE85-012177] N86-18787
SUDDEN IONOSPHERIC DISTURBANCES
The S19 guided sounding rocket S38 Trigger Optimized Repetition (TOR) N86-18841
SULFATES
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160585] N86-18559
SULFIDES
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160
SULFONES
Humidity sensing and measurement employing halogenated organic polymer membranes
[PB85-246866] N86-18706
SULFUR COMPOUNDS
Ag/AgCl reference electrode in thionyl chloride electrolytes
[DE85-016221] N86-18633
SULFURIC ACID
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
Painting stainless steel with alternating current N86-18533
SUMMER
Super Cold Arctic Mesopause Project (CAMP): A research project to investigate the polar middle atmosphere in summer with rocket launches from 65 deg-80 deg N N86-18831
SUN
Contributions to Proceedings from the NATO Advanced Research Workshop on the Seismology of the Sun and the Distant Stars
[NASA-CR-176470] N86-19275
The detection of global convective wave flows on the Sun N86-19276
Observations of low-degree P-mode oscillations in 1984 N86-19277
SUNRISE
Sunrise/sunset
[PB85-239929] N86-18888
SUNSET
Sunrise/sunset
[PB85-239929] N86-18888
SUNSPOT CYCLE
Geomagnetic activity and solar cycle N86-18859
SUNSPOTS
Application of solar max ACRIM data to analyze solar-driven climatic variability on Earth
[NASA-CR-176483] N86-18690
SUPERCOMPUTERS
Conflict sensitivity of algorithms. Part 1: A CRAY X-MP study
[AD-A160206] N86-19023
Memory conflict simulation of a many-processor CRAY architecture. Part 1: A CRAY X-MP study
[AD-A160205] N86-19049
SUPERCONDUCTING MAGNETS
Magnetically confined kinetic-energy storage ring: A new fundamental energy-storage concept
[DE85-007992] N86-18635
Magnet cable manufacturing
[DE86-000607] N86-18640
Forces on neutral atoms due to electromagnetic fields
[AD-A160719] N86-19151
Superconducting materials for the SSC
[DE86-000618] N86-19224
SUPERCONDUCTING POWER TRANSMISSION
Magnet cable manufacturing
[DE86-000607] N86-18640
SUPERCONDUCTIVITY
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625
A superconducting heavy ion injector linac
[DE85-013897] N86-19156
SUPERGIANT STARS
Excitation mechanisms in the atmospheres of yellow and red giant and supergiant stars N86-18834
SUPERHIGH FREQUENCIES
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links
[NASA-CR-176532] N86-18342
SUPERLATTICES
Layered magnetic superlattices
[DE85-018368] N86-19236
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237
SUPERMASSIVE STARS
Supermassive star formation: The early phases N86-19270
SUPERNOVA REMNANTS
The Cygnus loop supernova remnant: New observations and a framework for understanding its structure and evolution N86-19273
SUPERNOVAE
Astro-array: A space-based, coherent radio interferometer array
[AD-A160763] N86-18344
SUPERSONIC WIND TUNNELS
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329
SUPPORTS
Summary of tower designs for large horizontal axis wind turbines
[NASA-TM-87166] N86-18776
SURFACE COOLING
Active control of compressible flows on a curved surface
[NASA-CR-178018] N86-18648
SURFACE FINISHING
Aviaremont's efforts to introduce laser technology N86-18286
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
SURFACE NAVIGATION
USSR report: Transportation
[JPRS-UTR-85-015] N86-18323
Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159883] N86-18768
SURFACE PROPERTIES
Surface characteristics and molar volume of FeCl2-MeCl (Me = Li, Na, K, Rb, Cs) systems
[BLLD-M-36470-(5828.4)] N86-18456
The effect of bulk traps on the InP (Indium Phosphide) accumulation type MISFET (Metal-Insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672
An investigation of laser induced surface damage in glass
[AD-A160009] N86-18713
Surface infrared reflection-absorption spectroscopy using a tunable diode laser
[AD-A160145] N86-18715
Computing visible-surface representations
[AD-A160602] N86-19085
Helium scattering studies of the surface structure and dynamics of rare gas crystals
[AD-A159942] N86-19232
SURFACE REACTIONS
Surface enhancement factors for Raman scattering at silver electrodes. Role of adsorbate-surface interactions and electronic structure
[AD-A160120] N86-18485
Spectroscopy of metal/titania systems
[AD-A160698] N86-18499
SURFACE ROUGHNESS
Optical surface roughness and selective etching of interdendritic rexillium III phases(s)
[AD-A159949] N86-18495
The effect of surface conditiuns on the Mach reflection phenomenon
[AD-A160535] N86-18675
SURFACE VEHICLES
Boltzmann machines and artificial intelligence
[AD-A160644] N86-18314
SURFACES
Surface hardening of gas turbine engine vanes in an ultrasonic field N86-18541
SURFACTANTS
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
SURGES
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86-18926
SURVEILLANCE
Distributed sensor networks
[AD-A160598] N86-19136
SURVEYS
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
SWATH WIDTH
Techniques for achieving wide swath coverage with spaceborne SAR systems N86-18377
SWEDISH SPACE PROGRAM
The Swedish sounding rocket and balloon program N86-18815
SWIMMING
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] N86-18989
SWITCHING CIRCUITS
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625
GaP/Al/sub x/Ga/sub 1-x/P heterojunction semiconductor controlled rectifier for high-temperature electronic applications
[DE86-000204] N86-18641
Multi-function ring magnet power supply for rapid-cycling synchrotrons
[DE85-018395] N86-19221
SWITZERLAND
Swiss scientific balloon and sounding rocket experiments 1983-1985 N86-18814
SYMMETRY
Hermitian and nonnegativity preserving subspaces
[AD-A160294] N86-19081
SYNCHRONOUS SATELLITES
Flight model discharge system
[AD-A160434] N86-18349
SYNCHROTRON RADIATION
SXRF studies of bulk crack-tip plastic relaxation
[DE85-018013] N86-18760
Triply differential studies of atomic and molecular photoionization using synchrotron radiation
[AD-A160587] N86-19150
Design of the NSLS infrared beam line mirror no. 1
[DE85-018481] N86-19198
SYNCHROTRONS
Triply differential studies of atomic and molecular photoionization using synchrotron radiation
[AD-A160587] N86-19150
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171
Multi-function ring magnet power supply for rapid-cycling synchrotrons
[DE85-018395] N86-19221
SYNOPTIC METEOROLOGY
Some microphysical processes affecting aircraft icing
[AD-A160375] N86-18921

SYNTHESIS (CHEMISTRY)
Preparation of P-N-H and p-p compounds from a silylated amino(methylene) phosphine
[AD-A159829] N86-18443
Synthesis of synthetic hydrocarbons via alpha olefins
[AD-A160386] N86-18446
Block copolymers of isotactic polypropylene and 1,4 polybutadiene
[AD-A160147] N86-18547
Chemical modification of poly(ethylene imine) for polymeric electrolyte
[AD-A160482] N86-18554
Dual mechanism bifunctional polymers for the complexation of lanthanides and actinides
[DE86-000094] N86-18565
Polymer-based catalysts
[DE85-007904] N86-18567
Thermal plasma chemical synthesis of powders
[DE86-000793] N86-19225
SYNTHETIC APERTURE RADAR
The development of automatic methods for handling SAR images over land N86-18354
Synthetic aperture radar imaging of the sea surface during the PROMESS experiment N86-18372
The VARAN-S: An airborne synthetic aperture radar for research in microwave remote sensing N86-18376
Techniques for achieving wide swath coverage with spaceborne SAR systems N86-18377
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597
SYNTHETIC RESINS
Synthesis of synthetic hydrocarbons via alpha olefins
[AD-A160386] N86-18446
SYSTEM EFFECTIVENESS
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
Comparing the effectiveness of software testing strategies
[NASA-CR-176511] N86-19020
Structured exit interviews using MDS (Multidimensional scaling)
[AD-A160469] N86-19247
An annotated bibliography of literature integrating organizational and systems theory
[AD-A160912] N86-19249
SYSTEM FAILURES
Electro-thermomigration as an electrical overstress failure mechanism
[DE85-009839] N86-18634
Assessing system reliability using censoring methodology
[AD-A160616] N86-19115
SYSTEMS ANALYSIS
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] N86-18983
Bounds on interaction in multivariable systems and a design method for low interaction N86-19061
Assessing system reliability using censoring methodology
[AD-A160616] N86-19115
An annotated bibliography of literature integrating organizational and systems theory
[AD-A160912] N86-19249
SYSTEMS ENGINEERING
The ERS-1 Active Microwave Instrumentation (AMI) design constraints N86-18353
Advanced mirror furnace for long rod samples --- sounding rockets N86-18838
Space research in the era of the space station N86-18872
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] N86-18983
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel
[NASA-CR-176523] N86-18990
An analytic process model for systems design and measurement
[AD-A160472] N86-19031
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060
SYSTEMS INTEGRATION
Solar Simulation Laboratory description and manual
[AD-A159729] N86-18778
Microcomputer-based local automation model: Functional description
[AD-A160610] N86-19002
On the integration of logic programming and functional programming
[AD-A159751] N86-19013
Artificial intelligence in maintenance: Synthesis of technical issues
[AD-A160863] N86-19060
SYSTEMS SIMULATION
The VARAN-S: An airborne synthetic aperture radar for research in microwave remote sensing N86-18376
The ERS-1 altimeter tracker performance simulation N86-18387

T

TABLES (DATA)
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] N86-18986
TACTICS
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Combining decision analysis and artificial intelligence techniques. An intelligent aid for estimating enemy courses of action
[AD-A159846] N86-19057
TAIL ASSEMBLIES
Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321
TANTALUM
Investigation of temperature dependence of growth rate of oxide films on tantalum by method of interference indication
[BLL-M-36385-(5828.4)] N86-18455
TAPE RECORDERS
Random timer
[AD-D011937] N86-18687
TARGET RECOGNITION
An analysis of stimulus determinants of target detection in PBB (Passive broadband) displays
[AD-A160203] N86-19134
TARGET THICKNESS
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
TARGETS
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
An analysis of stimulus determinants of target detection in PBB (Passive broadband) displays
[AD-A160203] N86-19134
Distributed sensor networks
[AD-A160596] N86-19136
TAURUS CONSTELLATION
Correlation analysis of the Taurus molecular cloud complex N86-19272
TAXONOMY
Methods of conceptual clustering and their relation to numerical taxonomy
[AD-A160221] N86-19059
TAYLOR INSTABILITY
Fingering patterns in Hele-Shaw flow
[DE85-014952] N86-18679
TECHNICAL WRITING
Communicating across barriers at home and abroad
[DE85-015729] N86-18603
Computing Services Writing and Editing Standards
[DE85-018547] N86-19257
TECHNOLOGICAL FORECASTING
Geophysical radar altimeters for the 1990's --- satellite-borne N86-18375
TECHNOLOGY ASSESSMENT
The OTS: Sixth year in orbit N86-18345
The OTS: Seventh year in orbit N86-18346
Satellite remote sensing in hydrology N86-18358
Outstanding results from one year's activities of the ESA Metric Camera Working Group N86-18359
Drilling risers for great water depths: Advantage for mass reduction by means of composite materials
[SNIAS-852-430-101] N86-18454
Cadmium zinc sulfide/copper indium diselenide module design and cost assessment
[DE85-016854] N86-18509
Infrared detector research metal film bolometer detectors. Part 3: Preparation and performance
[AD-A160768] N86-18697
The importance of precision radar tracking data for the determination of density and winds from the high-altitude inflatable sphere N86-18819
Intercomparison of wind measurements performed with metrockets N86-18820
Information technologies and social transformation
[PB85-240521] N86-19263
Indianapolis technical innovation program: Program results N86-19266
TECHNOLOGY TRANSFER
Communicating across barriers at home and abroad
[DE85-015729] N86-18603
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
International Energy R and D represented in the Energy Data Base, 1984

Research and technology: 1985 annual report of the Lyndon B. Johnson Space Center
[NASA-TM-58272] N86-19260
TECHNOLOGY UTILIZATION
Use of satellite images in the design of a standard meteorological station network N86-18356
Future Modular Optoelectronic Multispectral Scanner (MOMS) developments: Discussion of improvements and possibilities to be expected for geological applications N86-18366
Remote sensing and archaeological research in Thessaly, Greece. New prospects in archaeological landscape N86-18380
TELECOMMUNICATION
Test and evaluation of teleconferencing video codecs transmitting at 1.5 MBps
[AD-A160845] N86-18602
TELECONFERENCING
Development of a video tape to test teleconferencing codecs
[AD-A160798] N86-18601
Test and evaluation of teleconferencing video codecs transmitting at 1.5 MBps
[AD-A160845] N86-18602
TELEMETRY
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links
[NASA-CR-176532] N86-18342
TELESCOPES
Design, construction and initial application of a low-light-level imaging detector N86-19189
TELEVISION SYSTEMS
Numerical modeling study of gain and downward radiation for selected FM and VHF-TV broadcast antenna systems
[PB85-238046] N86-18606
Design, construction and initial application of a low-light-level imaging detector N86-19189
TELLURIUM COMPOUNDS
Te2 chemiluminescence from alkali Atom-TeCl4 reactions
[AD-A160913] N86-18472
TEMPERATURE
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497
TEMPERATURE DEPENDENCE
Investigation of temperature dependence of growth rate of oxide films on tantalum by method of interference indication
[BLL-M-36385-(5828.4)] N86-18455
Kinetics of deformation and damage accumulation in concentration zones upon nonisothermal low-cycle loading N86-18512
Influence of temperature on microplasticity and cyclical strength of 1201 alloy N86-18514
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
Temperature dependence of the magnetic correlation in amorphous spin glass (Ni-Mn)75P16B6Al3 determined by neutron scattering
[DE85-018487] N86-19182
TEMPERATURE DISTRIBUTION
Nonisotropic temperature distributions in the auroral F-region as measured with EISCAT N86-18829
TEMPERATURE EFFECTS
Temporal stability of oxidizer solutions: A survey of candidate decon materials in seawater
[AD-A159734] N86-18457
A study of metal adhesion
[CE-TRANS-8026] N86-18480
Evaluation of the fatigue strength of austenitic steels at temperatures of 293 and 77 K
[BLL-RISLEY-TR-5231-(9091.9F)] N86-18486

TEMPERATURE MEASUREMENT

Effect of prolonged high temperature aging on operating properties of 15Kh1M1F steel N86-18534
Electron irradiation of p-type mercury cadmium telluride
[AD-A159737] N86-18612

TEMPERATURE MEASUREMENT
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873
Review of the Raman backscattering technique for the remote measurement of subsurface temperature and salinity: Volume 1
[AD-A160466] N86-18945

TEMPERATURE MEASURING INSTRUMENTS
Evaluation of irreversible humidity indicator
[AD-A159640] N86-18689

TEMPERATURE PROFILES
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18884

TEMPORAL DISTRIBUTION
Comments on techniques for spectral deconvolution N86-19278

TENSILE STRENGTH
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470

TENSILE STRESS
Influence of elastic-stress state created by coatings on the magnetic properties of the alloy Fe-3 percent Si N86-18532

TERMINAL BALLISTICS
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335

TERRAIN
Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159883] N86-18768

TERRAIN ANALYSIS
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597
Representation of topography in spectral models
[AD-A159917] N86-18877

TEST FACILITIES
Aeronautical facilities catalogue. Volume 2: Airbreathing propulsion and flight simulators
[NASA-RP-1133] N86-18328

TEST FIRING
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336

TETHERED SATELLITES
The tethered satellite system project N86-18842
Laboratory simulation of the electrodynamic interaction of the tethered satellite with the ionosphere N86-18844

TEXTS
Text compression using word tokenization
[DE86-000832] N86-19260

TEXTURES
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597

THEMATIC MAPPING
Analysis of the Metric Camera MC-BW for land use classification and land use hazard management (thematic mapping of Metric Camera Spacelab black and white photographs) N86-18363
Snow mapping from LANDSAT imagery N86-18381

THEOREMS
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
An application of the Perron-Frobenius theorem to a damage model problem
[AD-A160208] N86-19075

THERMAL CONDUCTIVITY
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
Thermal conductance of metallic interface in vacuum
[DE85-017860] N86-18680

THERMAL CYCLING TESTS
Corrosion resistant materials in MCFC environment
[DE85-017808] N86-18503
Kinetics of deformation and damage accumulation in concentration zones upon nonisothermal low-cycle loading N86-18512
Low-cycle fatigue and crack resistance of boiler pipes and steam lines made of 12Kh1MF steel N86-18515

THERMAL ENERGY
Preliminary considerations for extraction of thermal effect from magma
[DE85-009341] N86-18781

THERMAL EXPANSION
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470

THERMAL FATIGUE
Evaluation of the fatigue strength of austenitic steels at temperatures of 293 and 77 K
[BLL-RISLEY-TR-5231-(9091.9F)] N86-18486

THERMAL INSULATION
Radiative heat transfer under transient conditions
[DE86-001240] N86-18682

THERMAL MAPPING
Monitoring of ground fractures caused by volcanic eruptions using remote sensing techniques N86-18383

THERMAL PLASMAS
Thermal plasma chemical synthesis of powders
[DE86-000793] N86-19225

THERMAL POLLUTION
TRASSA system introduction causes various problems N86-18285

THERMAL STABILITY
Fire-retardant decorative inks for aircraft interiors
[NASA-TM-88198] N86-18441
Synthesis of synthetic hydrocarbons via alpha olefins
[AD-A160386] N86-18446
Thermal stability of certain hydrated phases in systems made using portland cement
[AD-A160443] N86-18553
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570

THERMAL STRESSES
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470

THERMOCHEMISTRY
Thermochemical model conversion and usage in energetic materials applications
[AD-A160651] N86-18571

THERMODYNAMIC CYCLES
Overview of free-piston Stirling SP-100 activities at the NASA Lewis Research Center
[NASA-TM-87224] N86-19264
Stirling powered van program overview
[NASA-TM-87227] N86-19265

THERMODYNAMIC EQUILIBRIUM
Hamiltonian structures underlying MHD equilibria
[DE86-001236] N86-19218

THERMODYNAMIC PROPERTIES
Thermal and mechanical properties of calcium lanthanum sulfide
[AD-A160611] N86-18470
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18884

THERMODYNAMICS
Effect of heat treatment on mechanical properties and microstructure of four different heats of ASTM A710 steel
[AD-A160831] N86-18500
Thermoelastic-plastic flow in solids
[DE86-001230] N86-18761
Development and validation of a vertically two-dimensional mesoscale numerical model
[AD-A160741] N86-18927

THERMOELASTICITY
Thermoelastic-plastic flow in solids
[DE86-001230] N86-18761
Studies of laser-generated ultrasonic waveforms at different orientations
[AERE-R-11686] N86-19145

THERMOELECTRIC POWER GENERATION
Heat pipe space nuclear reactor design assessment. Volume 1: Design status of the SP-100 heat pipe space nuclear reactor system
[AD-A160279] N86-19164
Heat pipe space nuclear reactor design assessment. Volume 2: Feasibility study of upgrading the SP-100 heat pipe space nuclear power system
[AD-A160280] N86-19165

THERMOELECTRICITY
Publications of the JPB Solar Thermal Power Systems Project 1976 through 1985
[NASA-CR-176533] N86-18777

THERMOMAGNETIC EFFECTS
Improving performance of hard-alloy plates by thermomagnetic abrasion treatment N86-18539

THERMOMECHANICAL TREATMENT
USSR Report: Materials Science and Metallurgy N86-18510

THERMOSETTING RESINS
Dielectric analysis of thermoset cure
[AD-A160291] N86-18551

THERMOSPHERE
Turbulent parameters of the lower thermosphere as determined by mass spectrometer during the MAP/WINE campaign --- polar regions N86-18851
On the comparison of turbulent parameters and eddy coefficients in the lower thermosphere --- polar regions; winter N86-18852

THIN FILMS
Spectroscopy of metal/titania systems
[AD-A160698] N86-18499
New multiple sheet resistance technology for thin film circuits
[DE85-016459] N86-18637
Humidity sensing and measurement employing halogenated organic polymer membranes
[PB85-246866] N86-18706
Lattice dynamics of rare gas multilayers on the Ag(111) surface. Theory and experiment
[AD-A159718] N86-19227
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
Layered magnetic superlattices
[DE85-018368] N86-19236
Neutron diffraction studies of thin film multilayer structures
[DE86-000208] N86-19237
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques, 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239

THIN PLATES
Development of a reduced mindlin hybrid stress thin multilayer plate element with application to edge contact problems
[AD-A160453] N86-18453

THIOPLASTICS
Photogeneration of confined soliton pairs (Bipolarons) in polythiophene
[AD-A160157] N86-18616

THREE DIMENSIONAL COMPOSITES
Three-dimensional stress singularities in anisotropic materials and composites
[AD-A160433] N86-18452

THREE DIMENSIONAL FLOW
Parametric determination of lift interference for three-dimensional models in the Emmen (Switzerland) aircraft works wind tunnel
[F+W-FO-1740] N86-18304
Lift interference corrections for three-dimensional tunnels with porous walls
[F+W-FO-1742] N86-18305
Calibration and use of five-hole flow direction probes for low speed wind tunnel application
[AD-A160262] N86-18330
PNS (Parabolized Navier-Stokes) computations for spinning and fin-stabilized projectiles at supersonic velocities
[AD-A160393] N86-18337
Measured similarity properties of eddy viscosity and mixing length in three-dimensional turbulent stern flows
[AD-A156644] N86-18666
Microburst wind shear models from the Joint Airport Weather Studies (JAWS)
[AD-A159758] N86-18910

THRESHOLDS
Evaluation of irreversible humidity indicator
[AD-A159640] N86-18689

THROMBOSIS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970

THRUST CONTROL
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18319

THUNDERSTORMS
The operational meteorology of convective weather. Volume 2: Storm scale analysis
[AD-A159919] N86-18913
Joint agency turbulence experiment
[AD-A160420] N86-18924
Weather Research Program
[PB85-246940] N86-18936

TIDES
Detailed spherical-harmonic representation of the Earth's gravity field and tidal effects from altimetric adjustments
[AD-A160419] N86-18882

TIME
The Bayesian approach to recursive state estimation: implementation and application
[AD-A160636] N86-19086
Time scale decomposition: The role of scaling in linear systems and transient states in finite-state Markov processes
[AD-A160185] N86-19120
TIME DEPENDENCE
Ageing-time dependence of mechanical properties of an elastomeric glass
[AD-A160261] N86-18548
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
The time-dependent incompressible Navier-Stokes equations via Finite Element Method (FEM) N86-18658
Computational fluid dynamics, volume 2 — conference
[VKI-LS-1985-04-VOL-2] N86-18660
Compact finite difference methods for solving incompressible Navier-Stokes equations around oscillating bodies N86-18661
Theory of spectral methods N86-18662
Bounds on interaction in multivariable systems and a design method for low interaction N86-19061
A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068
TIME MARCHING
Marching iterative methods for the parabolized and thin layer Navier-Stokes equations
[NASA-CR-178028] N86-18650
TIME SERIES ANALYSIS
In-flight turbulence detection
[AD-A160380] N86-18923
On the solution of circulant linear systems
[AD-A159841] N86-19067
TIME SHARING
Debugging in a parallel environment
[DE85-010775] N86-19040
TIMING DEVICES
Random timer
[AD-D011937] N86-18687
TIP SPEED
Laboratory experiments on active suppression of advanced turboprop noise
[NASA-TM-87129] N86-19125
TIP VANES
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774
TISSUES (BIOLOGY)
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] N86-18959
TITANIUM
Method for refining microstructures of blended elemental powder metallurgy titanium articles
[AD-D011936] N86-18490
TITANIUM ALLOYS
Method for refining microstructures of prealloyed powder metallurgy titanium articles
[AD-D011944] N86-18491
Properties of TiC powders produced from titanium or titanium-alloy chips N86-18537
TITANIUM CARBIDES
Contribution to the study of titanium nitride and carbide coatings obtained by Physical Vapour Deposition (PVD) on 6-5-2 steel tools
[BLL-RISLEY-TR-5220-(9091.9F)] N86-18488
Properties of TiC powders produced from titanium or titanium-alloy chips N86-18537
TITANIUM NITRIDES
Examples of the application of titanium nitride coatings on 6-5-2 steel tools for cutting steels with controlled inclusions
[BLL-RISLEY-TR-5221-(9091.9F)] N86-18487
Contribution to the study of titanium nitride and carbide coatings obtained by Physical Vapour Deposition (PVD) on 6-5-2 steel tools
[BLL-RISLEY-TR-5220-(9091.9F)] N86-18488
TITANIUM OXIDES
CO hydrogenation and adsorption studies on supported nickel SMSI catalysts
[AD-A160522] N86-18497
Spectroscopy of metal/titania systems
[AD-A160698] N86-18499
TOKAMAK DEVICES
Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak
[IPPJ-746] N86-19204
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217
TOLERANCES (PHYSIOLOGY)
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] N86-18967
TOLUENE
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957
TOMOGRAPHY
Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029
TOPOGRAPHY
Representation of topography in spectral models
[AD-A159917] N86-18877
TOPOLOGY
Chemical applications of topology and group theory. Twenty 8-vertex polyhedra and their rearrangements
[AD-A160589] N86-18469
Metal cluster topology: Applications to gold and platinum clusters
[AD-A160637] N86-18498
Chemical applications of topology and group theory. 19: The even permutations of the ligands in five-coordinate complexes viewed as proper rotations of the regular icosahedron
[AD-A160747] N86-19153
TOROIDAL PLASMAS
Helical fluctuation in Reversed Field Pinch (RFP) plasma
[IPPJ-748] N86-19203
Torsatron equilibrium and stability studies
[DE85-018088] N86-19216
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217
TORQUE
Axial compressor reversed flow performance
[AD-A160773] N86-18327
TORSION
Buckling of thin-walled unstiffened circular cylinders under torsion and pressure
[ESDU-84012] N86-18746
TOUGHNESS
Deflection in tapered cantilever beams deflection (gap opening) in double cantilever type fracture toughness specimens
[AD-A159887] N86-18753
TOW MISSILES
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
TOWED BODIES
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322
TOWERS
Summary of tower designs for large horizontal axis wind turbines
[NASA-TM-87166] N86-18776
TOXICITY
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
Toxicity of aqueous filmforming foams to marine organisms: Literature review and biological assessment
[AD-A160874] N86-18801
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957
TOXICOLOGY
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] N86-18962
TOXINS AND ANTITOXINS
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] N86-18951
Immunomodulation by proteins of bordetella pertussis
[AD-A160078] N86-18953
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969
TRACE CONTAMINANTS
Molecular transmission band models for the uniformly mixed and the trace gases
[AD-A160442] N86-18466
Practical aspects of measuring dry deposition
[DE85-018465] N86-18802
TRACE ELEMENTS
Satellite measurements of stratosphere constituents in the trace state N86-18875
TRACKING (POSITION)
Probabilistic evaluation of individual aircraft tracking techniques
[AD-A160146] N86-18312
Metric calibration of the Millstone Hill l-band radar
[AD-A160362] N86-18593
TRACKING NETWORKS
Distributed sensor networks
[AD-A160596] N86-19136
TRACKING RADAR
Calibration of an on-ground aircraft tracking radar by aerial photogrammetry
[NAL-TR-861] N86-18311
TRAINING AIRCRAFT
Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321
TRAINING ANALYSIS
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333
Structured exit interviews using MDS (Multidimensional scaling)
[AD-A160469] N86-19247
TRAINING DEVICES
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050
Basic skills resource center: Development and evaluation of computer-based learning strategy training modules
[AD-A160421] N86-19246
TRAINING SIMULATORS
Final evaluation of the light pen as the key component in a microcomputer-based simulator
[AD-A160461] N86-18999
TRAJECTORIES
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336
The beginnings of airborne weightlessness research
[AD-A160575] N86-18966
TRANSIENT RESPONSE
Plane wave scattering by thin linear dielectric-coated wires and dielectric strips: A moment method approach with physical basis functions N86-18581
TRANSITION METALS
Optical properties of the metals Al, Co, Cu, Au, Fe, Pb, Ni, Pd, Pt, Ag, Ti and W in the infrared and far infrared
[AD-A159736] N86-18492
TRANSITION PROBABILITIES
Investigation of the spatially anisotropic component of the laterally averaged molecular Hydrogen/Ag(111) physisorption potential
[AD-A159726] N86-19228
TRANSITS
Carlsberg automatic transit circle observations for INCA — HIPPARCOS Input Catalog (INCA) N86-18421
TRANSMISSION LINES
Electrostatic unbalances of transmission lines
[AD-A160742] N86-18628
Magnet cable manufacturing
[DE86-000607] N86-18640
Symmetric fin-lines — transmission lines
[FOA-C-30408-E] N86-18643
Out-of-band response of reflector antennas
[PB85-224476] N86-18644
High voltage picosecond pulse generation utilizing lasers
[AD-A159923] N86-18711
Microbending fiber optic acoustic sensor
[AD-D011938] N86-19124
TRANSMITTANCE
Molecular transmission band models for the uniformly mixed and the trace gases
[AD-A160442] N86-18466
The effects of hydrostatic pressure on optical fibers (fiscal year 1983 report)
[AD-A159915] N86-19191
TRANSMITTER RECEIVERS
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929
TRANSMITTERS
An investigation of Band 2 field strengths: The Northampton experiment
[BBC-RD-1985/6] N86-18582
TRANSONIC FLOW
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294

TRANSONIC WIND TUNNELS
Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290
TRANSPONDERS
Relative vertical positioning using ground-level transponders with the ERS-1 altimeter N86-18386
TRANSPORT AIRCRAFT
The test loads sequences applied to the CT4 full scale fatigue test
[AD-A160736] N86-18320
TRANSPORT PROPERTIES
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629
Experiments for the determination of convective diffusion heat/mass transfer to burner rig test targets comparable in size to jet stream diameter
[NASA-TM-87196] N86-18646
Transport theory and fluid dynamics
[DE85-018042] N86-18681
Measurements of stability limits for a space-charge-dominated ion beam in a long A.G. transport channel
[DE85-016636] N86-19155
TRANSPORT THEORY
Transport theory and fluid dynamics
[DE85-018042] N86-18681
TRANSPORTATION
USSR report: Transportation
[JPRS-UTR-85-014] N86-18284
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
TRANSVERSE WAVES
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021
TRAPPED PARTICLES
The role of metallurgical variables in controlling hydrogen embrittlement
[AD-A160445] N86-18496
Laser induced fluorescence of trapped molecular ions
[DE85-016896] N86-18726
TRAPS
The effect of bulk traps on the InP (Indium Phosphide) accumulation type MISFET (Metal-insulator-Semiconductor Field-Effect Transistor)
[AD-A160536] N86-18622
Emission characterization of a 2-stroke heavy-duty diesel coach engine and vehicle with and without a particulate trap
[PB85-239770] N86-18742
Forces on neutral atoms due to electromagnetic fields
[AD-A160719] N86-19151
TREES (MATHEMATICS)
On using inverted trees for updating graph properties
[AD-A160135] N86-19019
TRIANGLES
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
TRIANGULATION
Aerotriangulation with Spacelab Metric Camera images N86-18360
Some properties of n-dimensional triangulations
[NASA-CR-176535] N86-19009
TRIBOLOGY
Tribotechnical characteristics of ball bearing steel after chromizing N86-18531
Assessment of government tribology programs
[DE86-001121] N86-18739
TRINITROTOLUENE
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
TROPICAL REGIONS
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873
TROPOPAUSE
Study of large aerosol particles
[AD-A160379] N86-18880
TROPOSPHERE
Comparison between ST radar and in situ balloon measurements — atmospheric sounding N86-18849
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18884
TRUCKS
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
Stirling powered van program overview
[NASA-TM-87227] N86-19265
TRUSSES
An analytical investigation of a conceptual design for the station transverse boom rotary joint structure
[NASA-TM-87665] N86-18347
TUMORS
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] N86-18962
TUNABLE LASERS
Surface infrared reflection-absorption spectroscopy using a tunable diode laser
[AD-A160145] N86-18715
Spectroscopic diagnostics to support advanced microelectronic fabrication techniques
[AD-A160192] N86-18717
TUNGSTEN
Contact fatigue upon low-cycle loading of WC-Co hard alloys designed for pressure working of metals N86-18517
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171
TUNGSTEN ALLOYS
Contact fatigue upon low-cycle loading of WC-Co hard alloys designed for pressure working of metals N86-18517
TURBINE BLADES
Design method for the calculation of performances and flap movement of flexible wind turbine blades
[VTH-M-453] N86-18795
TURBOCOMPRESSORS
Axial compressor reversed flow performance
[AD-A160773] N86-18327
TURBOJET ENGINES
Calculation of the external nacelle surface for single and double stream jet engines for civil aircraft
[VTH-M-445] N86-18301
TURBOPROP AIRCRAFT
Laboratory experiments on active suppression of advanced turboprop noise
[NASA-TM-87129] N86-19125
TURBULENCE
Aircraft measurements and coordination in FASINEX
[AD-A160789] N86-18699
In-flight turbulence detection
[AD-A160380] N86-18923
Joint agency turbulence experiment
[AD-A160420] N86-18924
Correlation analysis of the Taurus molecular cloud complex N86-19272
TURBULENCE EFFECTS
Wind-excited behavior of structures 4 N86-18749
TURBULENT DIFFUSION
Stagnation-point heat transfer from jet flames
[TI85-011376] N86-18676
On the comparison of turbulent parameters and eddy coefficients in the lower thermosphere — polar regions; winter N86-18852
TURBULENT FLOW
Calibration and use of five-hole flow direction probes for low speed wind tunnel application
[AD-A160262] N86-18330
Vortex shedding from solid rocket motor propellant inhibitors N86-18569
Measured similarity properties of eddy viscosity and mixing length in three-dimensional turbulent stern flows
[AD-A156644] N86-18656
TWO DIMENSIONAL BODIES
Wind-tunnel investigation of the pressure distribution and deduced characteristics of semi-circular cylinder in the vicinity of critical Reynolds number
[NAL-TR-871] N86-18288
TWO DIMENSIONAL FLOW
Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290
Full pseudospectral solution to the Euler equations of motion for airfoil flow at transonic speeds
[AD-A159714] N86-18293
Two-dimensional Helmholtz flow about a flat plate and related shapes
[AD-A160806] N86-18295
Vortex shedding from solid rocket motor propellant inhibitors N86-18569
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
TWO PHASE FLOW
Effects of two-phase flow in shaft seals N86-18727
TYROSINE
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] N86-18958

U

U.S.S.R.
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] N86-18949
ULCERS
Review of duodenal and gastric ulcer
[AD-A160919] N86-18977
ULTRAPURE METALS
Ultrapure aluminum N86-18535
ULTRASONIC RADIATION
Comparisons between ultrasonic bulk shear wave velocities in textured steel with application to the measurement of residual stress
[AERE-R-11559] N86-19144
Studies of laser-generated ultrasonic waveforms at different orientations
[AERE-R-11686] N86-19145
ULTRASONIC SPECTROSCOPY
Information-measurement system for ultrasonic testing of welded joints N86-18542
Acoustic research report
[AD-A159900] N86-19128
ULTRASONIC TESTS
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
Information-measurement system for ultrasonic testing of welded joints N86-18542
ULTRASONICS
Ultrasonic f-scan inspection of composite materials
[AD-A159974] N86-18451
Surface hardening of gas turbine engine vanes in an ultrasonic field N86-18541
Review of ultrasonic velocity methods of determining residual stress
[AD-A160769] N86-18756
Defects and materials characterization by analysis of ultrasonic signals. Study of a technique to measure ultrasonic attenuation
[AD-A159927] N86-19129
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
ULTRAVIOLET LASERS
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716
ULTRAVIOLET RADIATION
Optical properties of the metals Al, Co, Cu, Au, Fe, Pb, Ni, Pd, Pt, Ag, Ti and W in the infrared and far infrared
[AD-A159736] N86-18492
Ultraviolet disinfection of water for small water supplies
[PB85-239960] N86-18579
ULTRAVIOLET SPECTRA
Excitation mechanisms in the atmospheres of yellow and red giant and supergiant stars N86-18834
The absolute fluxes of six hot stars in the ultrviolet (912 - 1600 angstroms) N86-19269
ULTRAVIOLET SPECTROSCOPY
Spectroscopic studies of carbon disulfide at high pressure
[AD-A160456] N86-18468
UNDERGROUND STORAGE
Evaluation of geologic and geophysical techniques for surface-to-subsurface projections of geologic characteristics in crystalline rock
[DE86-000221] N86-19172
Development of technology for the design of shallow land burial facilities at arid sites
[DE86-000759] N86-19173
Status of corrective measures technology for shallow land burial at arid sites
[DE86-000760] N86-19174
UNDERGROUND STRUCTURES
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
UNDERWATER ACOUSTICS
Theoretical studies and data analysis of wave propagation in random media
[AD-A160150] N86-18591
Sound transmission into shells doubly excited by incident waves and by arbitrary surface forcing functions
[AD-A159936] N86-19131

A study to determine the merit of ocean borehole systems for acoustic detection
[AD-A160149] N86-19133
Generation of underwater sound by a moving high-power laser source
[AD-A160900] N86-19138

UNDERWATER BREATHING APPARATUS
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] N86-18989

UNDERWATER STRUCTURES
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734

UNDERWATER TESTS
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734

UNMANNED SPACECRAFT
Spacelab special: STS 51-F/SL-2 N86-18436

UNSATURATION (CHEMISTRY)
Binding between carbon atoms and vacancies in platinum
[DE86-000624] N86-19238

UNSTEADY FLOW
Compressible, unsteady lifting-surface theory for a helicopter rotor in forward flight
[NASA-TP-2503] N86-18289
Role of small computers in two-dimensional flow modeling
[AD-A159666] N86-18667
Dynamic characteristics of the 48-inch water tunnel drive pump
[AD-A159904] N86-18668

USER MANUALS (COMPUTER PROGRAMS)
Users guide for normal mode objective analysis of global data assimilation
[AD-A160373] N86-18998
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA): User's guide
[AD-A160605] N86-19001
NCSMEMO, an IBM PC program using dBASE 3 to cross-reference letters
[DE85-018210] N86-19038
User's manual for Division 746's image processing system
[PB85-242394] N86-19046
Basics of searching MEDLINE: A guide for the health professional
[PB85-232650] N86-19262

USER REQUIREMENTS
Saguaro: A distributed operating system based on pools of servicers
[AD-A160183] N86-18592
A mechanism for natural language database N86-19252

UTILITIES
Phosphoric acid electric utility fuel cell technology development
[NASA-CR-176496] N86-18638

V

VACUUM
Conductivity, DSC, FTIR, and NMR studies of Poly(vinyl acetate) complexed with alkali metal salts
[AD-A160450] N86-18467
Production of vacuum-tight joints in materials by diffusion welding N86-18543
Development of electronic control of a superconducting gravity gradiometer
[AD-A160641] N86-18625
Thermal conductance of metallic interface in vacuum
[DE85-017860] N86-18680

VACUUM APPARATUS
Improved cycling cryopump
[DE85-017732] N86-18738
Forces on neutral atoms due to electromagnetic fields
[AD-A160719] N86-19151
Radio frequency vacuum feedthroughs for high-power ICRF heating applications
[DE85-016391] N86-19215

VACUUM CHAMBERS
A device for testing metal hardness at high temperatures N86-18511

VALUE
Evaluation of irreversible humidity indicator
[AD-A159840] N86-18689
An equation for one-sided tolerance limits for normal distributions
[AD-A159831] N86-19097

VANES
Surface hardening of gas turbine engine vanes in an ultrasonic field N86-18541

VAPOR DEPOSITION
Contribution to the study of titanium nitride and carbide coatings obtained by Physical Vapour Deposition (PVD) on 6-5-2 steel tools
[BLL-RISLEY-TR-5220-(9091.9F)] N86-18488

VAPOR PHASES
Catalytic combustion of gas turbines: Process modelling and kinetic study of iso-octane oxidation N86-18326
Te2 chemiluminescence from alkali Atom-TeCl4 reactions
[AD-A160913] N86-18472
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Spectroscopic diagnostics to support advanced microelectronic fabrication techniques
[AD-A160192] N86-18717

VAPOR PRESSURE
Vapor pressure of methylphosphonic dichloride: A compendium
[AD-A160613] N86-18447

VAPORIZING
Effects of two-phase flow in shaft seals N86-18727

VAPORS
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18600
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976

VARIABLE STARS
Specific problems related to variability --- stellar luminosity; HIPPARCOS N86-18408

VARIATIONAL PRINCIPLES
Introduction to finite elements N86-18654
Association/dissociation processes in dense gases
[AD-A160236] N86-19148

VECTOR ANALYSIS
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
An application of the Perron-Frobenius theorem to a damage model problem
[AD-A160208] N86-19075

VECTOR SPACES
Investigations of the access to the main memory of vector processor systems
[JUEL-1994] N86-19006

VECTORS (MATHEMATICS)
A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068

VEHICLES
Recursive gradient estimation using aplines for navigation of autonomous vehicles
[AD-A159883] N86-18768

VELOCITY
Review of ultrasonic velocity methods of determining residual stress
[AD-A160769] N86-18756
Joint agency turbulence experiment
[AD-A160420] N86-18924

VELOCITY DISTRIBUTION
On the function e to the power sigma (theta) and the velocity distribution around Eppler profiles
[VTH-M-514] N86-18297
On the functions e to the power sigma (theta) and tau (theta) and the velocity distribution around Lighthill profiles
[VTH-M-520] N86-18300
Resonant generation of ion waves on auroral field lines by positive slopes in ion velocity space
[KGI-PREPRINT-083] N86-19211
Correlation analysis of the Taurus molecular cloud complex N86-19272

VELOCITY MEASUREMENT
Comparisons between ultrasonic bulk shear wave velocities in textured steel with application to the measurement of residual stress
[AERE-R-11559] N86-19144

VENTILATION
Subsonic wall interference corrections for half-model tests using sparse wall pressure data
[LR-616] N86-18287

VENTILATION FANS
Effects of inflow conditions on discrete frequency noise generated by small, axial flow fans
[AD-A160579] N86-19135

VERBAL COMMUNICATION
Multimodal versus unimodal information processing of words
[AD-A160517] N86-18984

VERSATILITY
Clamping and positioning system to be applied for the manufacturing of small and medium sized batches on Numerical Control (NC) machines
[KFK-PFT-95] N86-18740

VERTICAL DISTRIBUTION
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
A comparison of moisture variables in the vertical interpolations of a 4-D assimilation system
[AD-A160464] N86-18925

VERTICAL MOTION
Calculation of source and structure parameters at regional and teleseismic distances
[AD-A160138] N86-18878
Development and validation of a vertically two-dimensional mesoscale numerical model
[AD-A160741] N86-18927

VERTICAL ORIENTATION
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18319
Relative vertical positioning using ground-level transponders with the ERS-1 altimeter N86-18386
Generation of vertically incident seismograms
[AD-A159695] N86-18876

VERY HIGH FREQUENCIES
Numerical modeling study of gain and downward radiation for selected FM and VHF-TV broadcast antenna systems
[PB85-238046] N86-18606
Frontal passage data from the SOUSY-VHF-radar
[AD-A160211] N86-18919

VERY LARGE SCALE INTEGRATION
Prototyping and small-volume parts through MOSIS (MOS Implementation System)
[AD-A160735] N86-18627

VERY LONG BASE INTERFEROMETRY
Milliarcsecond structures, VLBI and optical positions of 8 HIPPARCOS radio stars N86-18432

VIBRATION
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB
[AD-A160561] N86-18339
The Shock and Vibration Digest, volume 17, no. 7
[AD-A160321] N86-18747

VIBRATION ISOLATORS
Aseismic bash isolation N86-18748

VIBRATION MEASUREMENT
Simulated ground response using nonlinear elastic moduli
[AD-A160590] N86-18885

VIBRATIONAL SPECTRA
Effects of blade-to-blade dissimilarities on rotor-body lead-lag dynamics
[AD-A160497] N86-18317
Proceedings of the 40th Symposium on Molecular Spectroscopy
[AD-A160415] N86-19149

VIBRATIONAL STRESS
The Shock and Vibration Digest, volume 17, no. 7
[AD-A160321] N86-18747

VIBRATORY LOADS
The Shock and Vibration Digest, volume 17, no. 7
[AD-A160321] N86-18747

VIDEO DATA
Development of a video tape to test teleconferencing codecs
[AD-A160798] N86-18601
Test and evaluation of teleconferencing video codecs transmitting at 1.5 MBps
[AD-A160845] N86-18602

VIDEO EQUIPMENT
Random timer
[AD-D011937] N86-18687

VIRIAL THEOREM
Compact configurations within small evolving groups of galaxies N86-19271

VISCOELASTICITY
Finite element methods for non-Newtonian flows N86-18656
Mesh refinement analysis of the flow of a Maxwell fluid through an abrupt contraction
[DE85-012230] N86-18665

VISCOPLASTICITY
Deformation and variable loading of metal-polymer two-layer plates N86-18518

VISCOSITY
Viscosity rise during free radical crosslinking polymerization with inhibition
[AD-A159842] N86-18444
Fingering patterns in Hele-Shaw flow
[DE85-014952] N86-18679

The numerical viscosity of entropy stable schemes for systems of conservation laws
[NASA-CR-178021] N86-19065

VISCOUS FLOW
Molecular back flow from the exhaust plume of a space-based laser
[AD-A159998] N86-18712

VISCOUS FLUIDS
An experimental investigation of acoustic propagation in saturated sands with variable fluid properties
[AD-A159930] N86-19130

VISIBILITY
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Muir AAF, Harrisburg, Pennsylvania
[AD-A159731] N86-18907
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Kl Sawyer AFB, Michigan
[AD-A159732] N86-18908
Central American climatology
[AD-A159989] N86-18915

VISION
The effects of vocal versus manual response modalities on multi-task performance
[AD-A159830] N86-18588
Program of research in computer vision, image processing and architectures for image processing
[AD-A160248] N86-18694

VISUAL PERCEPTION
Computing visible-surface representations
[AD-A160602] N86-19085

VITREOUS MATERIALS
Effect of simple stress on the glass transition of polymers at high pressure
[AD-A160282] N86-18549

VOCODERS
The intelligibility of non-vocoded and vocoded semantically anomalous sentences
[AD-A160401] N86-18313

VOICE COMMUNICATION
Effects of noise and workload on a communication task
[AD-A160743] N86-18599
An efficient, RLS (Recursive-Least-Squares) data-driven echo canceller for fast initialization of full-duplex data transmission
[AD-A160177] N86-19021

VOICE CONTROL
The effects of vocal versus manual response modalities on multi-task performance
[AD-A159830] N86-18588

VOLATILITY
Vapor pressure of methylphosphonic dichloride: A compendium
[AD-A160613] N86-18447

VOLCANOES
Monitoring of ground fractures caused by volcanic eruptions using remote sensing techniques N86-18383
Study of large aerosol particles
[AD-A160379] N86-18880

VOLCANOLOGY
Monitoring of ground fractures caused by volcanic eruptions using remote sensing techniques N86-18383

VOLT-AMPERE CHARACTERISTICS
Laboratory simulation of the electrodynamic interaction of the tethered satellite with the ionosphere N86-18844

VOLTMETERS
Electro-optical Kerr effect voltage measurements on multi-megavolt pulsed power accelerators
[DE85-016580] N86-19158

VORTEX SHEDDING
Vortex shedding from solid rocket motor propellant inhibitors N86-18569

VORTICITY
Compact finite difference methods for solving incompressible Navier-Stokes equations around oscillating bodies N86-18661

VORTICITY EQUATIONS
Vortex shedding from solid rocket motor propellant inhibitors N86-18569

W

WAFERS
Method of making self-aligned IGFET
[AD-D011926] N86-18608
Transient velocity assessment in gallium arsenide, and of other GaAs characteristics related to device functions
[AD-A160786] N86-18629

WALL FLOW
Parametric determination of lift interference for three-dimensional models in the Emmen (Switzerland) aircraft works wind tunnel
[F+W-FO-1740] N86-18304

WALLS
Double wall artery heat pipe
[AD-A160012] N86-18671

WASHING
Development of combined nitrogen oxide/sulfur oxide environmental-control technology
[DE86-001301] N86-18804

WASTE DISPOSAL
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799
Southeastern Regional geologic characterization report: Volume 1
[DE86-000409] N86-18886
Development of performance assessment methodology for nuclear waste isolation in geologic media
[TI85-017813] N86-19167
Geologic and hydrologic characterization and evaluation of the basin and range province relative to disposal of high-level radioactive waste. Part 3: Geologic and hydrologic evaluation
[TI85-901876] N86-19168
Evaluation of geologic and geophysical techniques for surface-to-subsurface projections of geologic characteristics in crystalline rock
[DE86-000221] N86-19172
Development of technology for the design of shallow land burial facilities at arid sites
[DE86-000759] N86-19173
Status of corrective measures technology for shallow land burial at arid sites
[DE86-000760] N86-19174
Indianapolis technical innovation program: Program results N86-19266

WASTE ENERGY UTILIZATION
Open-cycle vapor compression heat pump
[PB85-222529] N86-18884

WASTE TREATMENT
Indianapolis technical innovation program: Program results N86-19266

WASTES
Subsurface transport of contaminants from energy process waste leachates
[DE86-001225] N86-18805

WATER
Ultraviolet disinfection of water for small water supplies
[PB85-239960] N86-18579
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18587
Calculation of H2O far-wing absorption within the single-perturber approximation
[AD-A160405] N86-19190

WATER CURRENTS
Assessment of cross-berth circulation at Charleston Naval Station
[AD-A160015] N86-18658
Physical oceanographic characteristics of the Nares Plain region of the western North Atlantic
[DE86-000059] N86-18948

WATER DEPTH
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937

WATER LANDING
High-Altitude Recovery Program (HARP) — sounding rocket payloads N86-18886

WATER MANAGEMENT
Satellite remote sensing in hydrology N86-18358

WATER POLLUTION
Ecological-evaluation of organotin-contaminated sediment
[AD-A160748] N86-18799

WATER QUALITY
Water resources data for Maine, water year 1984
[PB85-240265] N86-18771

WATER RESOURCES
Application of METEOSAT data for remote sensing of Earth resources: EARSeL Working Group 7 report — agrometeorology in drought areas N86-18357
Ultraviolet disinfection of water for small water supplies
[PB85-239960] N86-18579
Water resources data for Maine, water year 1984
[PB85-240265] N86-18771
Policy and organizational considerations for improving transfer of university research information and effecting availability of expertise to state agencies
[PB85-232932] N86-19261

WATER TEMPERATURE
Water resources data for Maine, water year 1984
[PB85-240265] N86-18771

WATER VAPOR
Stratospheric water-vapor measurements on board long-duration balloons N86-18848
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign — polar regions N86-18856
Clear-air transmission in the 8 to 12-micrometer band at selected stations
[AD-A160625] N86-19195

WATER WAVES
Synthetic aperture radar imaging of the sea surface during the PROMESS experiment N86-18372
Nonlinear parametric wave model compared with field data
[AD-A160004] N86-18937
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941
Directional wave measurement and analysis
[AD-A160760] N86-18947

WATERPROOFING
The effect of barrier coatings on the cure rate and fluid resistance of polysulphide sealants
[AD-A160728] N86-18561
Long-term, deep ocean test of concrete spherical structures: Results after 13 years
[AD-A160232] N86-18734

WAVE DISPERSION
Dispersion surfaces and ion wave instabilities in space plasmas
[KGI-PREPRINT-190] N86-19206
Dispersion surfaces — plasma waves
[KGI-PREPRINT-067] N86-19207
Determination of the surface phonon dispersion relations for monolayer, bilayer, trilayer and thick Kr(111) films physisorbed on Ag(111) by inelastic He scattering
[AD-A159761] N86-19229

Geometric structure and surface vibrational resonances: The BCC fe(3) surface
[AD-A159916] N86-19231

WAVE GENERATION
Resonant generation of ion waves on auroral field lines by positive slopes in ion velocity space
[KGI-PREPRINT-083] N86-19211

WAVE INTERACTION
Quantum theory of multiwave mixing N86-19241

WAVE PROPAGATION
Propagation of electromagnetic waves in two dimensionally periodic media N86-18580
Theoretical studies and data analysis of wave propagation in random media
[AD-A160150] N86-18591
Atmospheric multipath propagation over a long terrestrial line-of-sight path
[AD-A160392] N86-18594
Calculation of source and structure parameters at regional and teleseismic distances
[AD-A160138] N86-18878
Nonlinear wave propagation study
[AD-A160179] N86-18879
Acoustic research report
[AD-A159900] N86-19128
An experimental investigation of acoustic propagation in saturated sands with variable fluid properties
[AD-A159930] N86-19130

WAVE SCATTERING
Plane wave scattering by thin linear dielectric-coated wires and dielectric strips: A moment method approach with physical basis functions N86-18581

WAVEGUIDE LASERS
Nonlinear analysis of Ubitron/Free-Electron laser amplifiers in three-dimensions
[AD-A160631] N86-18722

WAVEGUIDES
Propagation of electromagnetic waves in two dimensionally periodic media N86-18580

WAVELENGTHS
A comparison of 8.415-, 32.0- and 565646-GHz deep space telemetry links
[NASA-CR-176532] N86-18342

WEAPON SYSTEMS
The benefits of recycling silver: A precious metal
[AD-A160895] N86-18501
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
Final evaluation of the light pen as the key component in a microcomputer-based simulator
[AD-A160461] N86-18699

WEAPONS
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

WEAR
Effect of ion implantation on subsequent erosion and wear behavior of solids
[DE86-000088] N86-18506
Effect of hardening treatments on microfluidity of steels and bronzes N86-18529
Tribotechnical characteristics of ball bearing steel after chromizing N86-18531
Assessment of government tribology programs
[DE86-001121] N86-18739

WEAR RESISTANCE
Examples of the application of titanium nitride coatings on 6-5-2 steel tools for cutting steels with controlled inclusions
[BLL-RISLEY-TR-5221-(9091.9F)] N86-18487

WEATHER
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Soesterberg, Netherlands. Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Hickam AFB, Hawaii
[AD-A159730] N86-18906
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Muir AAF, Harrisburg, Pennsylvania
[AD-A159731] N86-18907
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Kl Sawyer AFB, Michigan
[AD-A159732] N86-18908
Catalog of air weather service technical documents
[AD-A159881] N86-18912
The operational meteorology of convective weather. Volume 2: Storm scale analysis
[AD-A159919] N86-18913

WEATHER FORECASTING
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769
Catalog of air weather service technical documents
[AD-A159881] N86-18912
The European LFM-style forecast aids
[AD-A160166] N86-18918
Objective analysis and prediction techniques - 1984
[AD-A160377] N86-18922
Navy tactical applications guide. Volume 5, part 2: Indian Ocean (Arabian Sea/Bay of Bengal) weather analysis and forecast applications
[AD-A160781] N86-18928
Weather Research Program
[PB85-248940] N86-18936
Time durations of rain rates exceeding specified thresholds
[AD-A160463] N86-18944

WEATHER STATIONS
Use of satellite images in the design of a standard meteorological station network N86-18356

WEDGES
Three-dimensional stress singularities in anisotropic materials and composites
[AD-A160433] N86-18452
Matched asymptotic expansions to similarity solutions of shock diffraction
[NASA-CR-178022] N86-18649

WEIGHT INDICATORS
Weighting system calibration 1982. Part 1: Text and appendices --- wind tunnel balances
[VTH-M-515-1] N86-18298
Weighting system calibration 1982. Part 2: Tables and figures --- wind tunnel balances
[VTH-M-515-2] N86-18299

WEIGHTLESSNESS
Accommodation requirements for microgravity science and applications research on space station
[NASA-CR-175038] N86-18334
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379] N86-18950
The beginnings of airborne weightlessness research
[AD-A160575] N86-18966
Electrocrystallization in microgravity
[NASA-TM-87202] N86-19274

WEIGHTLESSNESS SIMULATION
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379] N86-18950
First German Spacelab missions, no. 6 N86-18979

WELD STRENGTH
Corrosion resistance of joints made by diffusion welding N86-18522

WELD TESTS
Microstructure and properties of selected high strength ferritic weld metals
[DE85-015107] N86-18502

WELDED JOINTS
Microstructure and properties of selected high strength ferritic weld metals
[DE85-015107] N86-18502
Corrosion resistance of joints made by diffusion welding N86-18522
Increasing the corrosion resistance of welded joints in A85 aluminum N86-18523
Information-measurement system for ultrasonic testing of welded joints N86-18542
Production of vacuum-tight joints in materials by diffusion welding N86-18543

WELDING
USSR Report: Materials Science and Metallurgy N86-18510

WELLS
Identification and characterization of hydrologic properties of fractured tuff using hydraulic and tracer tests, test well USW H-4, Yucca Mountain, Nye County, Nevada
[DE85-902212] N86-18770
Water resources data for Maine, water year 1984
[PB85-240265] N86-18771

WETTING
The role of Eigensolutions in nonlinear inverse Cavity-Flow-Theory, revision
[AD-A160424] N86-18672

WHISTLERS
On the relationship between whistlers, chorus, hiss, saucers, broadband electrostatic noise and the resonance cone
[KGI-PREPRINT-081] N86-19208

WIND (METEOROLOGY)
Low-level wind systems in the Warsaw Pact countries
[AD-A160144] N86-18916
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941

WIND DIRECTION
Low-level wind systems in the Warsaw Pact countries
[AD-A160144] N86-18916

WIND EFFECTS
The Shock and Vibration Digest, volume 17, no. 7
[AD-A160321] N86-18747
Wind-excited behavior of structures 4 N86-18749
Low-level wind systems in the Warsaw Pact countries
[AD-A160144] N86-18916

WIND MEASUREMENT
Synthetic aperture radar imaging of the sea surface during the PROMESS experiment N86-18372
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718
The importance of precision radar tracking data for the determination of density and winds from the high-altitude inflatable sphere N86-18819
Wind corners and wind strata in the mesosphere --- polar regions N86-18821
Use of satellite data to monitor high-altitude winds N86-18845
Simultaneous fine structure observation of wind and temperature profiles by the Arecibo (Puerto Rico) 430 MHz radar and in situ measurements N86-18873

WIND PRESSURE
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Giebelstadt ain Germany (West). Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159664] N86-18902
Soesterberg, Netherlands. Limited surface observations climatic summary (LISOCS): Parts A, C-F
[AD-A159665] N86-18903
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905

WIND PROFILES
Laser Doppler wind profile measurements above sea level --- North Sea
[DFVLR-FB-85-48] N86-18934

WIND SHEAR
Microburst wind shear models from the Joint Airport Weather Studies (JAWS)
[AD-A159758] N86-18910
Joint agency turbulence experiment
[AD-A160420] N86-18924

WIND TUNNEL APPARATUS
Subsonic wall interference corrections for half-model tests using sparse wall pressure data
[LR-616] N86-18287
Weighting system calibration 1982. Part 1: Text and appendices --- wind tunnel balances
[VTH-M-515-1] N86-18298
Weighting system calibration 1982. Part 2: Tables and figures --- wind tunnel balances
[VTH-M-515-2] N86-18299

WIND TUNNEL CALIBRATION
Weighting system calibration 1982. Part 1: Text and appendices --- wind tunnel balances
[VTH-M-515-1] N86-18298
Weighting system calibration 1982. Part 2: Tables and figures --- wind tunnel balances
[VTH-M-515-2] N86-18299
Lift interference corrections for three-dimensional tunnels with porous walls
[F+W-FO-1742] N86-18305
Calibration and use of five-hole flow direction probes for low speed wind tunnel application
[AD-A160262] N86-18330

WIND TUNNEL MODELS
Aerodynamic characteristics of an air-exchanger system for the 40- by 80-foot wind tunnel at Ames Research Center
[NASA-TM-88192] N86-18291

WIND TUNNEL TESTS
Subsonic wall interference corrections for half-model tests using sparse wall pressure data
[LR-616] N86-18287
Wind-tunnel investigation of the pressure distribution and deduced characteristics of semi-circular cylinder in the vicinity of critical Reynolds number
[NAL-TR-871] N86-18288
Flow quality of NAL two-dimensional transonic wind tunnel. Part 4: Characteristics of flow control
[NAL-TR-862] N86-18290
Aerodynamic characteristics of an air-exchanger system for the 40- by 80-foot wind tunnel at Ames Research Center
[NASA-TM-88192] N86-18291
Parametric determination of lift interference for three-dimensional models in the Emmen (Switzerland) aircraft works wind tunnel
[F+W-FO-1740] N86-18304
Current wind tunnel capability and planned improvements at Lewis Research Center
[NASA-TM-87190] N86-18329
Analysis of heat-transfer measurements from two AEDC wind tunnels on the shuttle external tank
[AD-A160406] N86-18331
Development and application of dynamic simulations of a subsonic wind tunnel
[NASA-TM-87211] N86-18338
Conceptual design of a data base for numerical simulator
[NAL-TR-869] N86-19047
Description of the low speed wind tunnel laboratory computer
[VTH-M-489] N86-19054

WIND TUNNEL WALLS
Subsonic wall interference corrections for half-model tests using sparse wall pressure data
[LR-616] N86-18287
Lift interference corrections for three-dimensional tunnels with porous walls
[F+W-FO-1742] N86-18305

WIND TUNNELS
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
Calibration and use of five-hole flow direction probes for low speed wind tunnel application
[AD-A160262] N86-18330

WIND TURBINES
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774
Mod-2 wind turbine field operations experiment
[NASA-TM-87233] N86-18775
Summary of tower designs for large horizontal axis wind turbines
[NASA-TM-87166] N86-18776
Design method for the calculation of performances and flap movement of flexible wind turbine blades
[VTH-M-453] N86-18795
Output calculations of the GIROMILL wind turbine
[VTH-M-484] N86-18796

WIND VARIATIONS
Wind corners and wind strata in the mesosphere --- polar regions N86-18821

WIND VELOCITY
Low-level wind systems in the Warsaw Pact countries
[AD-A160144] N86-18916
An investigation of hurricane-induced forerunner surge in the Gulf of Mexico
[AD-A160635] N86-18926
Oceanographic and meteorological conditions during a ship mooring force study
[AD-A160194] N86-18941

WIND VELOCITY MEASUREMENT
Intercomparison of wind measurements performed with metrockets N86-18820
Laser Doppler wind profile measurements above sea level --- North Sea
[DFVLR-FB-85-48] N86-18934

WINDOWS (APERTURES)
Laser interferometer measurements of refractive index in shock-compressed materials
[DE85-015505] N86-18678

WINDPOWER UTILIZATION
Mod-2 wind turbine field operations experiment
[NASA-TM-87233] N86-18775
New York State Police remote communications site small wind energy conversion system
[TI85-901683] N86-18784

WINDPOWERED GENERATORS
Output calculations of the GIROMILL wind turbine
[VTH-M-484] N86-18796

WINGLETS
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR-174991] N86-18774

WINTER
The aircraft icing environment in wintertime, low ceiling conditions
[AD-A160578] N86-18307
Large-scale structure of the middle atmosphere during the winter 1983/84 N86-18817
The middle atmosphere above Andoya Norway during the winter 1983/84 as derived from metrockets and OH nightglow observations N86-18818
Wind corners and wind strata in the mesosphere --- polar regions N86-18821
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign --- polar regions N86-18856
The sodium layer above Andoya, Norway, as observed by lidar from January through April 1984 N86-18857

WIRE
Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code Automation (IGUANA): Computer program package
[AD-A160652] N86-19003

WIRE WINDING
Plane wave scattering by thin linear dielectric-coated wires and dielectric strips: A moment method approach with physical basis functions N86-18581

WORD PROCESSING
A survey of public domain software for microcomputers
[AD-A160603] N86-19034

WORK CAPACITY
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18982

WORKLOADS (PSYCHOPHYSIOLOGY)
Effects of noise and workload on a communication task
[AD-A160743] N86-18599

X

X RAY APPARATUS
X-ray goniometer
[AD-D011927] N86-18685

X RAY DIFFRACTION
Studies of structure and transport in quasi-one dimensional conductors N86-19226

X RAY IMAGERY
SXRF studies of bulk crack-tip plastic relaxation
[DE85-018013] N86-18760

X RAY LASERS
Population inversion and gain measurements for X-ray laser development in magnetically confined plasma column in fiscal year 1984
[AD-A160186] N86-18716

X RAY SCATTERING
SAXS (Small Angle X-ray Scattering) study of micelle formation in mixtures of butadiene homopolymer and and styrene-butadiene block copolymer. Part 2: Effects of block lengths
[AD-A160656] N86-18560
Studies of structure and transport in quasi-one dimensional conductors N86-19226

X RAY SOURCES
Partially coherent X-rays from modern storage rings
[DE85-011157] N86-18724
The hard X-ray burst spectrometer event listing, 1980 - 1985
[NASA-TM-86236] N86-19279

X RAY SPECTRA
The Cygnus loop supernova remnant: New observations and a framework for understanding its structure and evolution N86-19273

X RAY SPECTROSCOPY
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233
The hard X-ray burst spectrometer event listing, 1980 - 1985
[NASA-TM-86236] N86-19279

X RAYS
Developments in gas detectors for synchrotron X-ray radiation
[DE86-001207] N86-18705
Partially coherent X-rays from modern storage rings
[DE85-011157] N86-18724
Evaluation techniques for X-ray mirrors and systems using visible light
[DE86-001206] N86-19199

XENON
Lattice dynamics of rare gas multilayers on the Ag(111) surface. Theory and experiment
[AD-A159718] N86-19227

XYLENE
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] N86-18957

Y

YAG LASERS
High voltage picosecond pulse generation utilizing lasers
[AD-A159923] N86-18711
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718

YAW
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18319

YIELD STRENGTH
Effect of simple stress on the glass transition of polymers at high pressure
[AD-A180282] N86-18549

Z

ZINC
Zinc-diffused narrow stripe AlGaAs/GaAs double heterostructure laser
[AD-D011943] N86-18709
ZONE MELTING
Ultrapure aluminum N86-18535

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing

Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

AERODYNE RESEARCH, INC., BILLERICA, MASS.
Spectroscopic diagnostics to support advanced microelectronic fabrication techniques
[AD-A160192] N86-18717

AEROJET ENERGY CONVERSION CO., SACRAMENTO, CALIF.
Test plan for high temperature/high pressure acoustic agglomerator
[DE85-017221] N86-18704

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Two-dimensional Helmholtz flow about a flat plate and related shapes
[AD-A160806] N86-18295
The test loads sequences applied to the CT4 full scale fatigue test
[AD-A160736] N86-18320
Resonance fatigue test of the empennage of a CT4 aircraft
[AD-A160749] N86-18321
Preliminary study of holographic interferometry applied to carbon fibre specimens
[AD-A160770] N86-18698
Review of ultrasonic velocity methods of determining residual stress
[AD-A160769] N86-18756

AEROSPACE CORP., EL SEGUNDO, CALIF.
Surface creep of mineral oil on inner ring of momentum wheel bearing
[AD-A160746] N86-18735
The use of electron beam position modulation in auger depth profile analysis
[AD-A159712] N86-19163
Spectrally selective shutter mechanism
[AD-A160619] N86-19194
Effects of crystallite orientation on the oxidation of MoS2 thin films
[AD-A160617] N86-19233

AEROSPACE RESEARCH APPLICATIONS CENTER, INDIANAPOLIS, IND.
Indianapolis technical innovation program: Program results N86-19266

AEROVIRONMENT, INC., MONROVIA, CALIF.
Development and testing of tip devices for horizontal axis wind turbines
[NASA-CR 174991] N86-18774

AGL, INC., PACIFIC GROVE, CALIF.
Numerical modeling study of gain and downward radiation for selected FM and VHF-TV broadcast antenna systems
[PB85-238046] N86-18606

AIR FORCE ACADEMY, COLO.
MNDO calculations of ions in chloroaluminate molten salts
[AD-A160620] N86-18471
The 3He nuclear gyroscope
[AD-A159924] N86-18690

AIR FORCE ARMAMENT LAB., EGLIN AFB, FLA.
Estimating the magnus moment effect on stability of 30-mm boomed projectiles
[AD-A160003] N86-18336

AIR FORCE ENVIRONMENTAL TECHNICAL APPLICATIONS CENTER, SCOTT AFB, ILL.
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Tinker AFB, Oklahoma
[AD-A159643] N86-18891
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Davis-Monthan AFB, Arizona
[AD-A159644] N86-18892
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Fort Rucker AIN, Alabama
[AD-A159645] N86-18893
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: Bremen International, West Germany
[AD-A159656] N86-18894
Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F: USAF Academy AFD, Colorado
[AD-A159657] N86-18895
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: General Billy Mitchell Field, Wisconsin
[AD-A159658] N86-18896
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Little Rock AFB, Arkansas
[AD-A159659] N86-18897
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Shaw AFB, Sumter, South Carolina
[AD-A159660] N86-18898
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Vicenza, Italy
[AD-A159661] N86-18899
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Aviano AB, Italy
[AD-A159662] N86-18900
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Minneapolis - St. Paul, Minnesota
[AD-A159663] N86-18901
Riyadh, Saudi Arabia limited surface observations climatic summary (LISOCS). Parts A, C-F
[AD-A159667] N86-18904
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Altus AFB, Oklahoma
[AD-A159668] N86-18905
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Hickam AFB, Hawaii
[AD-A159730] N86-18906
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Muir AAF, Harrisburg, Pennsylvania
[AD-A159731] N86-18907
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Kl Sawyer AFB, Michigan
[AD-A159732] N86-18908
Central American climatology
[AD-A159989] N86-18915
Low-level wind systems in the Warsaw Pact countries
[AD-A160144] N86-18916

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.
STS (Space Transportation System) launch-induced vibration forecasts for Vandenberg AFB
[AD-A160561] N86-18339
CRRES/SPACERAD (combined release and radiation effects satellite/space radiation effects program) experiment descriptions
[AD-A160504] N86-18350
Real time: Automatic vehicle potential determination from ESA measurements. Part 1: The count ratio algorithm
[AD-A160459] N86-18435
Representation of topography in spectral models
[AD-A159917] N86-18877
Profiles of temperature and density based on 1 and 10 percent extremes in the stratosphere and troposphere
[AD-A160552] N86-18884
Aviation weather forecasts based on advection: Experiments using modified initial conditions and improved analyses
[AD-A160369] N86-18920
Some microphysical processes affecting aircraft icing
[AD-A160375] N86-18921
In-flight turbulence detection
[AD-A160380] N86-18923
Joint agency turbulence experiment
[AD-A160420] N86-18924
A comparison of moisture variables in the vertical interpolations of a 4-D assimilation system
[AD-A160464] N86-18925
Time durations of rain rates exceeding specified thresholds
[AD-A160463] N86-18944
A parameterized procedure for determining real height from ionograms by use of generalized parabolic profiles
[AD-A160383] N86-19121

AIR FORCE HUMAN RESOURCES LAB., BROOKS AFB, TEX.
Flight training simulators. Effects of terrain accuracy on simulated radar image quality
[AD-A160905] N86-18333

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.
An electronic index of articles pertaining to Air Force transportation in the post-World War 2 era, with abstracts of selected articles
[AD-A160837] N86-18308
Probabilistic evaluation of individual aircraft tracking techniques
[AD-A160146] N86-18312
Axial compressor reversed flow performance
[AD-A160773] N86-18327
The benefits of recycling silver: A precious metal
[AD-A160895] N86-18501
Effects of noise and workload on a communication task
[AD-A160743] N86-18599
Electrostatic unbalances of transmission lines
[AD-A160742] N86-18628
A comparative evaluation of the reliability improvement in line replaceable units warranted under the F-16 reliability improvement warranty
[AD-A160830] N86-18630
Comparison of two MTF measurement methods: Sine-wave versus edge gradient analysis
[AD-A160800] N86-18700
Methylene chloride sampling with passive dosimeters under steady-state and transient conditions
[AD-A160794] N86-18800
Development and validation of a vertically two-dimensional mesoscale numerical model
[AD-A160741] N86-18927
Lidar multiple scattering/depolarization in stratus clouds
[AD-A160899] N86-18929
Case studies of the structure of the atmospheric boundary layer entrainment zone
[AD-A160911] N86-18930
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] N86-18969

SOURCE

AIR FORCE PACKAGING EVALUATION AGENCY, WRIGHT-PATTERSON AFB

An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] N86-18972
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] N86-18973
Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study
[AD-A160799] N86-18974
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] N86-18975
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] N86-18976
An investigation into effects of environmental changes on locus of control
[AD-A160861] N86-18987
The design and implementation of an operating system for the IBM personal computer
[AD-A160875] N86-19052
The Bayesian approach to recursive state estimation: Implementation and application
[AD-A160836] N86-19086

AIR FORCE PACKAGING EVALUATION AGENCY, WRIGHT-PATTERSON AFB, OHIO.
Evaluation of irreversible humidity indicator
[AD-A159840] N86-18689

AIR FORCE WEAPONS LAB., KIRTLAND AFB, N. MEX.
A digital microbarograph system
[AD-A160914] N86-18701

AIR WEATHER SERVICE, SCOTT AFB, ILL.
Catalog of air weather service technical documents
[AD-A159861] N86-18912
The operational meteorology of convective weather. Volume 2: Storm scale analysis
[AD-A159919] N86-18913

ANALYTIC SCIENCES CORP., READING, MASS.
Analysis and simulation of multisensor gravity surveys: Volume 1
[AD-A160388] N86-18881
A statistical gravity model for northern Texas
[AD-A160474] N86-18883

ARGONNE NATIONAL LAB., ILL.
Precipitation of Kr after implantation into Al
[DE85-018344] N86-18505
Coupling between eddy currents and rigid body rotation: Analysis, computation, and experiments
[DE85-013877] N86-18604
Magnetically confined kinetic-energy storage ring: A new fundamental energy-storage concept
[DE85-007982] N86-18635
Advanced Tubular Evacuated Solar Collector Workshop, summary
[DE85-018366] N86-18788
Practical aspects of measuring dry deposition
[DE85-018465] N86-18802
Development of combined nitrogen oxide/sulfur oxide environmental-control technology
[DE86-001301] N86-18804
Factors affecting manufacturing costs of complex systems, and the role of new technologies in reducing these costs
[DE85-018557] N86-19041
ANL user's guide to accessing the energy research Cray X-MP computer
[DE85-018558] N86-19042
Characterization of acoustic emission signals generated by water flow through intergranular stress corrosion cracks
[TI85-014970] N86-19140
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141
Acoustic detection of cavitation in a prototype centrifugal pump
[DE85-018447] N86-19142
A superconducting heavy ion injector linac
[DE85-013897] N86-19156
Fractal behavior of single-particle trajectories and isosets in isotropic and anisotropic fluids
[DE85-018343] N86-19160
Distortion of He emission lines after fast-ion collisions
[DE85-018347] N86-19161
Conceptual design of the Argonne 6-GeV synchrotron light source
[DE85-018419] N86-19171
Plasma current profile shaping with rf-current drive
[DE85-018414] N86-19217
Multi-junction ring magnet power supply for rapid-cycling synchrotrons
[DE85-018395] N86-19221
IPNS grooved, solid methane moderator
[DE85-018401] N86-19222
Layered magnetic superlattices
[DE85-018368] N86-19236
Computing Services Writing and Editing Standards
[DE85-018547] N86-19257

ARIZONA UNIV., TUCSON.
Saguaro: A distributed operating system based on pools of servicers
[AD-A160183] N86-18592
Quantum theory of multiwave mixing N86-19241

ARMED FORCES RADIOBIOLOGY RESEARCH INST., BETHESDA, MD.
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] N86-18959

ARMY ARMAMENT RESEARCH AND DEVELOPMENT COMMAND, WATERVLIET, N. Y.
The densification of molybdenum and molybdenum alloy powders using hot isostatic pressing
[AD-A159886] N86-18493
Analysis of elastic-plastic ball indentation to measure strength of high strength steels
[AD-A159882] N86-18752
Deflection in tapered cantilever beams deflection (gap opening) in double cantilever type fracture toughness specimens
[AD-A159887] N86-18753
Recursive gradient estimation using splines for navigation of autonomous vehicles
[AD-A159883] N86-18768
A local refinement finite element method for time dependent partial differential equations
[AD-A159885] N86-19068

ARMY AVIATION ENGINEERING FLIGHT ACTIVITY, EDWARDS AFB, CALIF.
Preliminary airworthiness evaluation of the AH-1S (modernized cobra) with the Hellfire, TOW, and Stinger missiles installed
[AD-A160862] N86-18322

ARMY AVIATION RESEARCH AND DEVELOPMENT COMMAND, MOFFETT FIELD, CALIF.
Effects of blade-to-blade dissimilarities on rotor-body lead-lag dynamics
[AD-A160497] N86-18317

ARMY COLD REGIONS RESEARCH AND ENGINEERING LAB., HANOVER, N. H.
Electromagnetic measurements of multi-year sea ice using impulse radar
[AD-A160737] N86-18596
Suitability of polyvinyl chloride pipe for monitoring TNT, RDX, HMX, and DNT in groundwater
[AD-A160733] N86-18798

ARMY ENGINEER TOPOGRAPHIC LABS., FORT BELVOIR, VA.
Third-order co-occurrence texture analysis applied to samples of high resolution synthetic aperture radar imagery
[AD-A160640] N86-18597

ARMY ENGINEER WATERWAYS EXPERIMENT STATION, VICKSBURG, MISS.
Development of a sanded expansive salt grout for repository sealing application
[AD-A160431] N86-18552
Thermal stability of certain hydrated phases in systems made using portland cement
[AD-A160443] N86-18553
Characterization of four class H high sulfate-resistant portland cements
[AD-A160551] N86-18557
Development of a sanded nonsalt expansive grout for repository sealing application
[AD-A160594] N86-18558
Characterization of several plasters and one retarder for repository sealing mixtures
[AD-A160595] N86-18559
Military hydrology. Report 8: Feasibility of utilizing satellite and radar data in hydrologic forecasting
[AD-A160615] N86-18769

ARMY ENVIRONMENTAL HYGIENE AGENCY, ABERDEEN PROVING GROUND, MD.
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] N86-18955

ARMY MATERIALS AND MECHANICS RESEARCH CENTER, WATERTOWN, MASS.
Commentary on US Army standard test method for flexural strength of high performance ceramics at ambient temperature
[AD-A160873] N86-18563

ARMY MEDICAL BIOENGINEERING RESEARCH AND DEVELOPMENT LAB., FORT DETRICK, MD.
Automated ion chromatography
[AD-A159764] N86-18460

ARMY MEDICAL RESEARCH INST. OF INFECTIOUS DISEASES, FORT DETRICK, MD.
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] N86-18951

ARMY MISSILE COMMAND, REDSTONE ARSENAL, ALA.
Further results from application of the isobasis design technique of disturbance minimizing control to a linear, time-invariant second-order state set-point regulator with time-varying external disturbance
[AD-A160545] N86-18623
Translation, rotation, scale and aspect invariant matched filter and scene combination
[AD-A160623] N86-18696
Fast Fourier Transform (FFT) subroutine for determining frequency response data for digital simulations
[AD-A160546] N86-19033
Clear-air transmission in the 8 to 12-micrometer band at selected stations
[AD-A160625] N86-19195

ARMY RESEARCH AND TECHNOLOGY LABS., MOFFETT FIELD, CALIF.
Calculation of helicopter airfoil characteristics for high tip-speed applications
[AD-A160694] N86-18294
An investigation of the use of bandwidth criteria for rotorcraft handling-qualities specifications
[AD-A160664] N86-18319

ARMY RESEARCH INST. FOR THE BEHAVIORAL AND SOCIAL SCIENCES, ALEXANDRIA, VA.
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] N86-18992
Final evaluation of the light pen as the key component in a microcomputer-based simulator
[AD-A160481] N86-18999
The Hewlett-Packard HP-41CV hand-held computer as a medium for teaching mathematics to fire control systems repairers
[AD-A160440] N86-19050

ARMY RESEARCH INST. OF ENVIRONMENTAL MEDICINE, NATICK, MASS.
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] N86-18965
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] N86-18967
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] N86-18970

ARNOLD ENGINEERING DEVELOPMENT CENTER, ARNOLD AIR FORCE STATION, TENN.
Analysis of heat-transfer measurements from two AEDC wind tunnels on the shuttle external tank
[AD-A160406] N86-18331

ASTRONOMISCHE RECHEN-INSTITUT, HEIDELBERG (WEST GERMANY).
The Astronomisches Rechen-Institut (ARI) catalog of astrometric data for the HIPPARCOS Input Catalog N86-18418
Astrometric data for nearby stars N86-18419
A critical examination of radio star data N86-18430

AUBURN UNIV., ALA.
Vortex shedding from solid rocket motor propellant inhibitors N86-18589

AURORAL OBSERVATORY, TROMSO (NORWAY).
Nonisotropic temperature distributions in the auroral F-region as measured with EISCAT N86-18829
The MAP/WINE electron density profiles in the D and E regions: A comparison of EISCAT, PRE rocket data N86-18855

B

BADISCHE STAHLWERKE A.G., KEHL (WEST GERMANY).
Procedure for manufacturing poly (acetylene) foils
[DE86-001259] N86-18566

BALLISTIC RESEARCH LABS., ABERDEEN PROVING GROUND, MD.
Polar moments and ballistic properties of tri-foil penetrators
[AD-A159870] N86-18335
PNS (Parabolized Navier-Stokes) computations for spinning and fin-stabilized projectiles at supersonic velocities
[AD-A160393] N86-18337
Critical analysis of nitramine decomposition data: Activation energies and frequency factors for HMX and RDX decomposition
[AD-A160543] N86-18570
Reflected impulse near spherical charges
[AD-A160797] N86-18572

Maximum bounded entropy: Application to tomographic reconstruction
[AD-A160429] N86-19029

BARCELONA UNIV. (SPAIN).
Complementary astrometric observations of minor planets at Barcelona N86-18417
Complementary photometric observations for HIPPARCOS N86-18426
Radio observations of HIPPARCOS stars N86-18433

BATTELLE INST., FRANKFURT AM MAIN (WEST GERMANY).
Materials science research in rockets, especially in the fields of fluid physics and of metallic dispersions N86-18835

BATTELLE MEMORIAL INST., ARGONNE, ILL.
Southeastern Regional geologic characterization report: Volume 1
[DE86-000409] N86-18886

BELGIAN ROYAL OBSERVATORY, UCCLE.
Concerns, realizations and prospects of the subgroup double stars of the HIPPARCOS Input Catalog (INCA) consortium N86-18413
New wide double stars in the HIPPARCOS Input Catalog N86-18414
Observability of spectroscopic double stars by HIPPARCOS N86-18415

BELL TELEPHONE LABS., INC., MURRAY HILL, N. J.
Complex molecular motions in bulk hard segment polyurethanes: A deuterium NMR study
[AD-A159760] N86-18459

BEN GURION UNIV. OF THE NEGEV, BEERSHEVA (ISRAEL).
The effect of surface conditions on the Mach reflection phenomenon
[AD-A160535] N86-18675

BERGEN UNIV. (NORWAY).
The Norwegian scientific balloon and sounding rocket program 1985-1988 N86-18816
The Coordinated EISCAT and Balloon Observations (CEBO): Experiment and results N86-18823

BERN UNIV. (SWITZERLAND).
Swiss scientific balloon and sounding rocket experiments 1983-1985 N86-18814
The Cold Arctic Mesopause Project (CAMP) campaign 1982 N86-18830
Super Cold Arctic Mesopause Project (CAMP): A research project to investigate the polar middle atmosphere in summer with rocket launches from 65 deg-80 deg N N86-18831

BETTIS ATOMIC POWER LAB., WEST MIFFLIN, PA.
Vectorization of diffusion computations in the presence of periodic boundary conditions
[DE85-017631] N86-19087

BIELEFELD UNIV. (WEST GERMANY).
The Phi 2 to the 4th power equations of motion. Part 1: Sign and splitting properties. Definition of Phi Lambda-subsets
[REPT-52-A-PT-1] N86-19243

BOEING COMMERCIAL AIRPLANE CO., SEATTLE, WASH.
The 737 graphite composite flight spoiler flight service evaluation
[NASA-CR-172600] N86-18448
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-177929] N86-18449

BOEING MILITARY AIRPLANE DEVELOPMENT, SEATTLE, WASH.
Atmospheric electricity hazards threat environment definition
[AD-A159739] N86-18909

BOHAN (WALTER A.) CO., PARK RIDGE, ILL.
Navy tactical applications guide. Volume 5, part 2: Indian Ocean (Arabian Sea/Bay of Bengal) weather analysis and forecast applications
[AD-A160781] N86-18928

BONN UNIV. (WEST GERMANY).
Intercomparison of wind measurements performed with metrockets N86-18820
Wind corners and wind strata in the mesosphere N86-18821
Turbulent parameters of the lower thermosphere as determined by mass spectrometer during the MAP/WINE campaign N86-18851
On the comparison of turbulent parameters and eddy coefficients in the lower thermosphere N86-18852
The sodium layer above Andoya, Norway, as observed by lidar from January through April 1984 N86-18857

BORDEAUX UNIV. (FRANCE).

TORONTO UNIV. (ONTARIO).
Collision of Mach reflections with a 90 deg ramp in air and CO2
[UTIAS-290] N86-18645
TRANE CO., LACROSSE, WIS.
Evaluation of advanced design concepts for absorption heat pumps
[DE85-005090] N86-18780
TRANSPORTATION SYSTEMS CENTER, CAMBRIDGE, MASS.
Monitoring of GPS (Global Positioning System) system performance
[PB85-242980] N86-18315

U

UNITED KINGDOM ATOMIC ENERGY AUTHORITY, HARWELL (ENGLAND).
Comparisons between ultrasonic bulk shear wave velocities in textured steel with application to the measurement of residual stress
[AERE-R-11559] N86-19144
Studies of laser-generated ultrasonic waveforms at different orientations
[AERE-R-11686] N86-19145
Small angle neutron scattering data on cements with pozzolanic additives
[AERE-R-11609] N86-19162
Thin Films and Interfaces: UKAEA Conference on Materials Analysis by Physical Techniques. 32nd Conference in the series formerly known as the Diffraction Analysis Conference-Atomic Energy Establishment
[AERE-R-11655] N86-19239
Neutron diffraction methods for the study of residual stress fields
[AERE-R-11630] N86-19240
UNITED TECHNOLOGIES CORP., SOUTH WINDSOR, CONN.
Onsite 40-kilowatt fuel cell power plant manufacturing and field test program
[NASA-CR-174988] N86-18773
UNIVERSAL ENERGY SYSTEMS, INC., DAYTON, OHIO.
Double wall artery heat pipe
[AD-A160012] N86-18671
UNIVERSITE CATHOLIQUE DE LOUVAIN (BELGIUM).
Basic equations of fluid mechanics N86-18653
Introduction to finite elements N86-18654

Finite element calculation of generalized Newtonian flow N86-18655
Finite element methods fon non-Newtonian flows N86-18656

UNIVERSITE DES SCIENCES ET TECHNIQUES DU LANGUEDOC, MONTPELLIER (FRANCE).
Specific problems related to variability N86-18408

UNIVERSITIES RESEARCH ASSOCIATION, BERKELEY, CALIF.
Technical advisory on SSC site criteria and catalog of site information needs
[DE86-000218] N86-19223

UNIVERSITY COLL., LONDON (ENGLAND).
Geophysical radar altimeters for the 1990's N86-18375
Development and design of an advanced directional shear
[AD-A159647] N86-18751

UNIVERSITY OF SOUTHERN CALIFORNIA, MARINA DEL REY.
Prototyping and small-volume parts through MOSIS (MOS Implementation System)
[AD-A160735] N86-18627
Controlling production firing: The FCL language
[AD-A160423] N86-19028

UTAH UNIV., SALT LAKE CITY.
Comparison between surface-enhanced Raman and surface infrared spectroscopies for strongly perturbed adsorbates: Thiocyanate at gold electrodes
[AD-A159954] N86-18462

V

VALENCIA UNIV. (SPAIN).
Use of satellite images in the design of a standard meteorological station network N86-18356

VARIAN ASSOCIATES, PALO ALTO, CALIF.
Investigation of Re-X glass ceramic for acceleration insulating columns
[DE86-000598] N86-18639

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.
Transport theory and fluid dynamics
[DE85-018042] N86-18681
Factorization and reduction methods for optimal control of distributed parameter systems
[NASA-CR-178033] N86-18992

VISIDYNE, INC., BURLINGTON, MASS.
Project ABLE: (Atmospheric Balloonborne Lidar Experiment)
[AD-A160372] N86-18718

VON KARMAN INST. FOR FLUID DYNAMICS, RHODE-SAINT-GENESE (BELGIUM).
Computational fluid dynamics, volume 1
[VKI-LS-1985-04-VOL-1] N86-18652
Computational fluid dynamics, volume 2
[VKI-LS-1985-04-VOL-2] N86-18660

W

WASHINGTON STATE UNIV., PULLMAN.
Fracto-emission from polymers
[AD-A160510] N86-18555

WASHINGTON UNIV., SEATTLE.
Ultraviolet disinfection of water for small water supplies
[PB85-239960] N86-18579
Physical oceanographic characteristics of the Nares Plain region of the western North Atlantic
[DE86-000059] N86-18948
UW/NW (University of Washington/Northwest) VLSI Consortium
[AD-A160292] N86-18997
Generalized rank annihilation factor analysis
[AD-A160851] N86-19117

WASHINGTON UNIV., ST. LOUIS, MO.
Comparison of X-ray computed tomography, through-transmission ultrasound, and low-kV X-ray imaging for characterizing green-state ceramics
[DE85-018370] N86-19141

WATERLOO UNIV. (ONTARIO).
Computer-aided design of robust decentralized controllers
[AD-A160118] N86-19017

WEATHER WING (2ND), APO NEW YORK. 09012
The European LFM-style forecast aids
[AD-A160166] N86-18918

WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Dual-stroke heat pump field performance
[DE85-005247] N86-18783

WESTON GEOPHYSICAL CORP., WESTBORO, MASS.
Simulated ground response using nonlinear elastic moduli
[AD-A160590] N86-18885

WISCONSIN UNIV., MADISON.
Numerical analysis
[AD-A160207] N86-19074

WOMA APPARATEBAU, DUISBURG (WEST GERMANY).
Deburring of metal workpieces with directed high pressure water jets. Basis and application limits
[KFK-PFT-107] N86-18741

WUPPERTAL UNIV. (WEST GERMANY).
Measurements of minor constituents infrared emissions in the middle atmosphere during MAP/WINE campaign N86-18856

WYLE LABS., INC., HUNTSVILLE, ALA.
Accommodation requirements for microgravity science and applications research on space station
[NASA-CR-175038] N86-18334

WYOMING UNIV., LARAMIE.
Study of large aerosol particles
[AD-A160379] N86-18880

X

XEROX WEBSTER RESEARCH CENTER, N.Y.
Chemical bonding, interdiffusion and electronic structure at InP, GaAs, and Si-metal interfaces
[AD-A160403] N86-18618

Y

YALE UNIV., NEW HAVEN, CONN.
Parallel direct methods for solving banded linear systems
[AD-A160148] N86-18995
Foundations of knowledge for distributed systems
[AD-A160233] N86-19024

YALE UNIV. OBSERVATORY, NEW HAVEN, CONN.
On the solution of circulant linear systems
[AD-A159841] N86-19067

YORK UNIV., DOWNSVIEW (ONTARIO).
Intramolecular coupling in metal-free binuclear phthalocyanines
[AD-A160784] N86-19154

Typical Contract Number Index Listing

DE-AC06-77RL-01030 ..... N86-10633

CONTRACT NUMBER — NASA ACCESSION NUMBER

Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

REPORT/ACCESSION NUMBER INDEX

Typical Report Number Index Listing

Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.
